5.1 The Monoidal Category of Sets and Products

5.1.1 Products of Sets

See [Constructions With Sets, Section 4.1.3](#).

5.1.2 The Internal Hom of Sets

See [Constructions With Sets, Section 4.3.5](#).

5.1.3 The Monoidal Unit

DEFINITION 5.1.3.1.1 ► THE MONOIDAL UNIT OF \times

The **monoidal unit of the product of sets** is the functor

$$\mathbb{1}^{\text{Sets}} : \text{pt} \rightarrow \text{Sets}$$

defined by

$$\mathbb{1}_{\text{Sets}} \stackrel{\text{def}}{=} \text{pt},$$

where pt is the terminal set of [Constructions With Sets, Definition 4.1.1.1.1](#).

5.1.4 The Associator

DEFINITION 5.1.4.1.1 ► THE ASSOCIATOR OF \times

The **associator of the product of sets** is the natural isomorphism

$$\alpha^{\text{Sets}}: \times \circ (\times \times \text{id}_{\text{Sets}}) \xrightarrow{\sim} \times \circ (\text{id}_{\text{Sets}} \times \times) \circ \alpha^{\text{Cats}_2}_{\text{Sets}, \text{Sets}, \text{Sets}},$$

as in the diagram

$$\begin{array}{ccc}
 & \text{Sets} \times (\text{Sets} \times \text{Sets}) & \\
 \alpha^{\text{Cats}_2}_{\text{Sets}, \text{Sets}, \text{Sets}} \nearrow & & \searrow \text{id} \times \times \\
 (\text{Sets} \times \text{Sets}) \times \text{Sets} & & \text{Sets} \times \text{Sets} \\
 \downarrow \times \times \text{id} & \nearrow \alpha^{\text{Sets}} & \downarrow \times \\
 \text{Sets} \times \text{Sets} & \xrightarrow{\times} & \text{Sets},
 \end{array}$$

whose component

$$\alpha^{\text{Sets}}_{X,Y,Z}: (X \times Y) \times Z \xrightarrow{\sim} X \times (Y \times Z)$$

at (X, Y, Z) is given by

$$\alpha^{\text{Sets}}_{X,Y,Z}((x, y), z) \stackrel{\text{def}}{=} (x, (y, z))$$

for each $((x, y), z) \in (X \times Y) \times Z$.

PROOF 5.1.4.1.2 ► PROOF OF THE CLAIMS MADE IN DEFINITION 5.1.4.1.1

Invertibility

The inverse of $\alpha^{\text{Sets}}_{X,Y,Z}$ is the morphism

$$\alpha^{\text{Sets}, -1}_{X,Y,Z}: X \times (Y \times Z) \xrightarrow{\sim} (X \times Y) \times Z$$

defined by

$$\alpha^{\text{Sets}, -1}_{X,Y,Z}(x, (y, z)) \stackrel{\text{def}}{=} ((x, y), z)$$

for each $(x, (y, z)) \in X \times (Y \times Z)$. Indeed:

- *Invertibility I.* We have

$$\begin{aligned} [\alpha_{X,Y,Z}^{\text{Sets},-1} \circ \alpha_{X,Y,Z}^{\text{Sets}}]((x, y), z) &\stackrel{\text{def}}{=} \alpha_{X,Y,Z}^{\text{Sets},-1}(\alpha_{X,Y,Z}^{\text{Sets}}((x, y), z)) \\ &\stackrel{\text{def}}{=} \alpha_{X,Y,Z}^{\text{Sets},-1}(x, (y, z)) \\ &\stackrel{\text{def}}{=} ((x, y), z) \\ &\stackrel{\text{def}}{=} [\text{id}_{(X \times Y) \times Z}]((x, y), z) \end{aligned}$$

for each $((x, y), z) \in (X \times Y) \times Z$, and therefore we have

$$\alpha_{X,Y,Z}^{\text{Sets},-1} \circ \alpha_{X,Y,Z}^{\text{Sets}} = \text{id}_{(X \times Y) \times Z}.$$

- *Invertibility II.* We have

$$\begin{aligned} [\alpha_{X,Y,Z}^{\text{Sets}} \circ \alpha_{X,Y,Z}^{\text{Sets},-1}](x, (y, z)) &\stackrel{\text{def}}{=} \alpha_{X,Y,Z}^{\text{Sets}}(\alpha_{X,Y,Z}^{\text{Sets},-1}(x, (y, z))) \\ &\stackrel{\text{def}}{=} \alpha_{X,Y,Z}^{\text{Sets}}((x, y), z) \\ &\stackrel{\text{def}}{=} (x, (y, z)) \\ &\stackrel{\text{def}}{=} [\text{id}_{X \times (Y \times Z)}](x, (y, z)) \end{aligned}$$

for each $(x, (y, z)) \in X \times (Y \times Z)$, and therefore we have

$$\alpha_{X,Y,Z}^{\text{Sets},-1} \circ \alpha_{X,Y,Z}^{\text{Sets}} = \text{id}_{X \times (Y \times Z)}.$$

Therefore $\alpha_{X,Y,Z}^{\text{Sets}}$ is indeed an isomorphism.

Naturality

We need to show that, given functions

$$f: X \rightarrow X',$$

$$g: Y \rightarrow Y',$$

$$h: Z \rightarrow Z'$$

the diagram

$$\begin{array}{ccc} (X \times Y) \times Z & \xrightarrow{(f \times g) \times h} & (X' \times Y') \times Z' \\ \alpha_{X,Y,Z}^{\text{Sets}} \downarrow & & \downarrow \alpha_{X',Y',Z'}^{\text{Sets}} \\ X \times (Y \times Z) & \xrightarrow{f \times (g \times h)} & X' \times (Y' \times Z') \end{array}$$

commutes. Indeed, this diagram acts on elements as

$$\begin{array}{ccc}
 ((x, y), z) & \xrightarrow{\quad} & ((f(x), g(y)), h(z)) \\
 \downarrow & & \downarrow \\
 (x, (y, z)) \xrightarrow{\quad} (f(x), (g(y), h(z))) & & (f(x), (g(y), h(z)))
 \end{array}$$

and hence indeed commutes, showing $\alpha^{\mathbf{Sets}}$ to be a natural transformation.

Being a Natural Isomorphism

Since $\alpha^{\mathbf{Sets}}$ is natural and $\alpha^{\mathbf{Sets}, -1}$ is a componentwise inverse to $\alpha^{\mathbf{Sets}}$, it follows from [Categories, Item 2](#) of [Proposition 11.9.7.1.2](#) that $\alpha^{\mathbf{Sets}, -1}$ is also natural. Thus $\alpha^{\mathbf{Sets}}$ is a natural isomorphism. 

5.1.5 The Left Unitor

DEFINITION 5.1.5.1.1 ► THE LEFT UNITOR OF \times

The **left unitor of the product of sets** is the natural isomorphism

$$\lambda^{\mathbf{Sets}}: \times \circ (\mathbb{1}^{\mathbf{Sets}} \times \text{id}_{\mathbf{Sets}}) \xrightarrow{\sim} \lambda_{\mathbf{Sets}}^{\mathbf{Cats}_2}$$

whose component

$$\lambda_X^{\mathbf{Sets}}: \text{pt} \times X \xrightarrow{\sim} X$$

at $X \in \text{Obj}(\mathbf{Sets})$ is given by

$$\lambda_X^{\mathbf{Sets}}(\star, x) \stackrel{\text{def}}{=} x$$

for each $(\star, x) \in \text{pt} \times X$.

|

|

Invertibility

The inverse of λ_X^{Sets} is the morphism

$$\lambda_X^{\text{Sets}, -1} : X \xrightarrow{\sim} \text{pt} \times X$$

defined by

$$\lambda_X^{\text{Sets}, -1}(x) \stackrel{\text{def}}{=} (\star, x)$$

for each $x \in X$. Indeed:

- *Invertibility I.* We have

$$\begin{aligned} [\lambda_X^{\text{Sets}, -1} \circ \lambda_X^{\text{Sets}}](\text{pt}, x) &= \lambda_X^{\text{Sets}, -1}(\lambda_X^{\text{Sets}}(\text{pt}, x)) \\ &= \lambda_X^{\text{Sets}, -1}(x) \\ &= (\text{pt}, x) \\ &= [\text{id}_{\text{pt} \times X}](\text{pt}, x) \end{aligned}$$

for each $(\text{pt}, x) \in \text{pt} \times X$, and therefore we have

$$\lambda_X^{\text{Sets}, -1} \circ \lambda_X^{\text{Sets}} = \text{id}_{\text{pt} \times X}.$$

- *Invertibility II.* We have

$$\begin{aligned} [\lambda_X^{\text{Sets}} \circ \lambda_X^{\text{Sets}, -1}](x) &= \lambda_X^{\text{Sets}}(\lambda_X^{\text{Sets}, -1}(x)) \\ &= \lambda_X^{\text{Sets}, -1}(\text{pt}, x) \\ &= x \\ &= [\text{id}_X](x) \end{aligned}$$

for each $x \in X$, and therefore we have

$$\lambda_X^{\text{Sets}} \circ \lambda_X^{\text{Sets}, -1} = \text{id}_X.$$

Therefore λ_X^{Sets} is indeed an isomorphism.

Naturality

We need to show that, given a function $f: X \rightarrow Y$, the diagram

$$\begin{array}{ccc} \text{pt} \times X & \xrightarrow{\text{id}_{\text{pt}} \times f} & \text{pt} \times Y \\ \lambda_X^{\text{Sets}} \downarrow & & \downarrow \lambda_Y^{\text{Sets}} \\ X & \xrightarrow{f} & Y \end{array}$$

commutes. Indeed, this diagram acts on elements as

$$\begin{array}{ccc} (\star, x) & & (\star, x) \mapsto (\star, f(x)) \\ \downarrow & & \downarrow \\ x & \mapsto & f(x) \end{array}$$

and hence indeed commutes. Therefore λ^{Sets} is a natural transformation.

Being a Natural Isomorphism

Since λ^{Sets} is natural and $\lambda^{\text{Sets}, -1}$ is a componentwise inverse to λ^{Sets} , it follows from [Categories, Item 2](#) of [Proposition 11.9.7.1.2](#) that $\lambda^{\text{Sets}, -1}$ is also natural. Thus λ^{Sets} is a natural isomorphism. 

5.1.6 The Right Unitor

DEFINITION 5.1.6.1.1 ► THE RIGHT UNITOR OF \times

The **right unitor of the product of sets** is the natural isomorphism

$$\rho^{\text{Sets}}: \times \circ (\text{id} \times \mathbb{1}^{\text{Sets}}) \xrightarrow{\sim} \rho_{\text{Sets}}^{\text{Cats}_2},$$

whose component

$$\rho_X^{\mathbf{Sets}}: X \times \mathbf{pt} \dashrightarrow X$$

at $X \in \mathbf{Obj}(\mathbf{Sets})$ is given by

$$\rho_X^{\mathbf{Sets}}(x, \star) \stackrel{\text{def}}{=} x$$

for each $(x, \star) \in X \times \mathbf{pt}$.

PROOF 5.1.6.1.2 ► PROOF OF THE CLAIMS MADE IN DEFINITION 5.1.6.1.1

Invertibility

The inverse of $\rho_X^{\mathbf{Sets}}$ is the morphism

$$\rho_X^{\mathbf{Sets}, -1}: X \dashrightarrow X \times \mathbf{pt}$$

defined by

$$\rho_X^{\mathbf{Sets}, -1}(x) \stackrel{\text{def}}{=} (x, \star)$$

for each $x \in X$. Indeed:

- *Invertibility I.* We have

$$\begin{aligned} [\rho_X^{\mathbf{Sets}, -1} \circ \rho_X^{\mathbf{Sets}}](x, \star) &= \rho_X^{\mathbf{Sets}, -1}(\rho_X^{\mathbf{Sets}}(x, \star)) \\ &= \rho_X^{\mathbf{Sets}, -1}(x) \\ &= (x, \star) \\ &= [\text{id}_{X \times \mathbf{pt}}](x, \star) \end{aligned}$$

for each $(x, \star) \in X \times \mathbf{pt}$, and therefore we have

$$\rho_X^{\mathbf{Sets}, -1} \circ \rho_X^{\mathbf{Sets}} = \text{id}_{X \times \mathbf{pt}}.$$

- *Invertibility II.* We have

$$\begin{aligned} [\rho_X^{\mathbf{Sets}} \circ \rho_X^{\mathbf{Sets}, -1}](x) &= \rho_X^{\mathbf{Sets}}(\rho_X^{\mathbf{Sets}, -1}(x)) \\ &= \rho_X^{\mathbf{Sets}, -1}(x, \star) \\ &= x \end{aligned}$$

$$= [\text{id}_X](x)$$

for each $x \in X$, and therefore we have

$$\rho_X^{\text{Sets}} \circ \rho_X^{\text{Sets}, -1} = \text{id}_X.$$

Therefore ρ_X^{Sets} is indeed an isomorphism.

Naturality

We need to show that, given a function $f: X \rightarrow Y$, the diagram

$$\begin{array}{ccc} X \times \text{pt} & \xrightarrow{f \times \text{id}_{\text{pt}}} & Y \times \text{pt} \\ \rho_X^{\text{Sets}} \downarrow & & \downarrow \rho_Y^{\text{Sets}} \\ X & \xrightarrow{f} & Y \end{array}$$

commutes. Indeed, this diagram acts on elements as

$$\begin{array}{ccc} (x, \star) & & (x, \star) \mapsto (f(x), \star) \\ \downarrow & & \downarrow \\ x & \mapsto & f(x) \end{array}$$

and hence indeed commutes. Therefore ρ^{Sets} is a natural transformation.

Being a Natural Isomorphism

Since ρ^{Sets} is natural and $\rho^{\text{Sets}, -1}$ is a componentwise inverse to ρ^{Sets} , it follows from **Categories, Item 2** of **Proposition 11.9.7.1.2** that $\rho^{\text{Sets}, -1}$ is also natural. Thus ρ^{Sets} is a natural isomorphism. 

5.1.7 The Symmetry

DEFINITION 5.1.7.1.1 ► THE SYMMETRY OF \times

The **symmetry of the product of sets** is the natural isomorphism

$$\sigma^{\mathbf{Sets}} : \times \xrightarrow{\sim} \times \circ \sigma_{\mathbf{Sets}, \mathbf{Sets}}^{\mathbf{Cats}_2},$$

$$\begin{array}{ccc} \mathbf{Sets} \times \mathbf{Sets} & \xrightarrow{\times} & \mathbf{Sets}, \\ & \searrow \sigma_{\mathbf{Sets}, \mathbf{Sets}}^{\mathbf{Cats}_2} \quad \downarrow \sigma^{\mathbf{Sets}} \quad \nearrow \times & \\ & \mathbf{Sets} \times \mathbf{Sets} & \end{array}$$

whose component

$$\sigma_{X,Y}^{\mathbf{Sets}} : X \times Y \xrightarrow{\sim} Y \times X$$

at $X, Y \in \mathbf{Obj}(\mathbf{Sets})$ is defined by

$$\sigma_{X,Y}^{\mathbf{Sets}}(x, y) \stackrel{\text{def}}{=} (y, x)$$

for each $(x, y) \in X \times Y$.

PROOF 5.1.7.1.2 ► PROOF OF THE CLAIMS MADE IN DEFINITION 5.1.7.1.1

Invertibility

The inverse of $\sigma_{X,Y}^{\mathbf{Sets}}$ is the morphism

$$\sigma_{X,Y}^{\mathbf{Sets}, -1} : Y \times X \xrightarrow{\sim} X \times Y$$

defined by

$$\sigma_{X,Y}^{\mathbf{Sets}, -1}(y, x) \stackrel{\text{def}}{=} (x, y)$$

for each $(y, x) \in Y \times X$. Indeed:

- *Invertibility I.* We have

$$\begin{aligned} [\sigma_{X,Y}^{\mathbf{Sets}, -1} \circ \sigma_{X,Y}^{\mathbf{Sets}}](x, y) &\stackrel{\text{def}}{=} \sigma_{X,Y}^{\mathbf{Sets}, -1}(\sigma_{X,Y}^{\mathbf{Sets}}(x, y)) \\ &\stackrel{\text{def}}{=} \sigma_{X,Y}^{\mathbf{Sets}, -1}(y, x) \\ &\stackrel{\text{def}}{=} (x, y) \\ &\stackrel{\text{def}}{=} [\text{id}_{X \times Y}](x, y) \end{aligned}$$

for each $(x, y) \in X \times Y$, and therefore we have

$$\sigma_{X,Y}^{\mathbf{Sets}, -1} \circ \sigma_{X,Y}^{\mathbf{Sets}} = \text{id}_{X \times Y}.$$

- *Invertibility II.* We have

$$\begin{aligned} [\sigma_{X,Y}^{\mathbf{Sets}} \circ \sigma_{X,Y}^{\mathbf{Sets}, -1}](y, x) &\stackrel{\text{def}}{=} \sigma_{X,Y}^{\mathbf{Sets}, -1}(\sigma_{X,Y}^{\mathbf{Sets}}(y, x)) \\ &\stackrel{\text{def}}{=} \sigma_{X,Y}^{\mathbf{Sets}, -1}(x, y) \\ &\stackrel{\text{def}}{=} (y, x) \\ &\stackrel{\text{def}}{=} [\text{id}_{Y \times X}](y, x) \end{aligned}$$

for each $(y, x) \in Y \times X$, and therefore we have

$$\sigma_{X,Y}^{\mathbf{Sets}} \circ \sigma_{X,Y}^{\mathbf{Sets}, -1} = \text{id}_{Y \times X}.$$

Therefore $\sigma_{X,Y}^{\mathbf{Sets}}$ is indeed an isomorphism.

Naturality

We need to show that, given functions

$$\begin{aligned} f: X &\rightarrow A, \\ g: Y &\rightarrow B \end{aligned}$$

the diagram

$$\begin{array}{ccc} X \times Y & \xrightarrow{f \times g} & A \times B \\ \sigma_{X,Y}^{\mathbf{Sets}} \downarrow & & \downarrow \sigma_{A,B}^{\mathbf{Sets}} \\ Y \times X & \xrightarrow{g \times f} & B \times A \end{array}$$

commutes. Indeed, this diagram acts on elements as

$$\begin{array}{ccc} (x, y) & & (x, y) \mapsto (f(x), g(y)) \\ \downarrow & & \downarrow \\ (y, x) \mapsto (g(y), f(x)) & & (g(y), f(x)) \end{array}$$

and hence indeed commutes, showing $\sigma^{\mathbf{Sets}}$ to be a natural transformation.

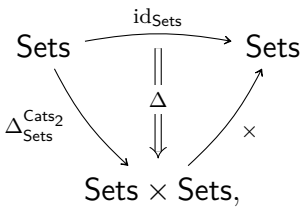

Being a Natural Isomorphism

Since $\sigma^{\mathbf{Sets}}$ is natural and $\sigma^{\mathbf{Sets}, -1}$ is a componentwise inverse to $\sigma^{\mathbf{Sets}}$, it follows from [Categories, Item 2](#) of [Proposition 11.9.7.1.2](#) that $\sigma^{\mathbf{Sets}, -1}$ is also natural. Thus $\sigma^{\mathbf{Sets}}$ is a natural isomorphism. 

5.1.8 The Diagonal

DEFINITION 5.1.8.1.1 ► THE DIAGONAL OF \times

The **diagonal of the product of sets** is the natural transformation

$$\Delta: \text{id}_{\mathbf{Sets}} \Rightarrow \times \circ \Delta_{\mathbf{Sets}}^{\mathbf{Cats}_2},$$

whose component

$$\Delta_X: X \rightarrow X \times X$$

at $X \in \text{Obj}(\mathbf{Sets})$ is given by

$$\Delta_X(x) \stackrel{\text{def}}{=} (x, x)$$

for each $x \in X$.

PROOF 5.1.8.1.2 ► PROOF OF THE CLAIMS MADE IN DEFINITION 5.1.8.1.1

We need to show that, given a function $f: X \rightarrow Y$, the diagram

$$\begin{array}{ccc} X & \xrightarrow{f} & Y \\ \Delta_X \downarrow & & \downarrow \Delta_Y \\ X \times X & \xrightarrow{f \times f} & Y \times Y \end{array}$$

commutes. Indeed, this diagram acts on elements as

$$\begin{array}{ccc} x & & x \longmapsto f(x) \\ \downarrow & & \downarrow \\ (x, x) \longmapsto (f(x), f(x)) & & (f(x), f(x)) \end{array}$$

and hence indeed commutes, showing Δ to be natural. 

PROPOSITION 5.1.8.1.3 ► PROPERTIES OF THE DIAGONAL MAP

Let X be a set.

1. *Monoidality.* The diagonal map

$$\Delta: \text{id}_{\mathbf{Sets}} \Longrightarrow \times \circ \Delta_{\mathbf{Sets}}^{\mathbf{Cats}_2},$$

is a monoidal natural transformation:

- (a) *Compatibility With Strong Monoidality Constraints.* For each $X, Y \in \text{Obj}(\mathbf{Sets})$, the diagram

$$\begin{array}{ccc} X \times Y & \xrightarrow{\Delta_X \times \Delta_Y} & (X \times X) \times (Y \times Y) \\ \searrow \Delta_{X \times Y} & & \downarrow \cong \\ & & (X \times Y) \times (X \times Y) \end{array}$$

commutes.

(b) *Compatibility With Strong Unitality Constraints.* The diagrams

$$\begin{array}{ccc}
 \text{pt} & \xrightarrow{\Delta_{\text{pt}}} & \text{pt} \times \text{pt} \\
 \searrow & & \downarrow \lambda_{\text{pt}}^{\text{Sets}} \\
 & & \text{pt}
 \end{array}
 \quad
 \begin{array}{ccc}
 \text{pt} & \xrightarrow{\Delta_{\text{pt}}} & \text{pt} \times \text{pt} \\
 \searrow & & \downarrow \rho_{\text{pt}}^{\text{Sets}} \\
 & & \text{pt}
 \end{array}$$

commute, i.e. we have

$$\begin{aligned}
 \Delta_{\text{pt}} &= \lambda_{\text{pt}}^{\text{Sets}, -1} \\
 &= \rho_{\text{pt}}^{\text{Sets}, -1},
 \end{aligned}$$

where we recall that the equalities

$$\begin{aligned}
 \lambda_{\text{pt}}^{\text{Sets}} &= \rho_{\text{pt}}^{\text{Sets}}, \\
 \lambda_{\text{pt}}^{\text{Sets}, -1} &= \rho_{\text{pt}}^{\text{Sets}, -1}
 \end{aligned}$$

are always true in any monoidal category by Monoidal Categories, ?? of ??.

2. *The Diagonal of the Unit.* The component

$$\Delta_{\text{pt}}: \text{pt} \xrightarrow{\sim} \text{pt} \times \text{pt}$$

of Δ at pt is an isomorphism.

PROOF 5.1.8.1.4 ► PROOF OF PROPOSITION 5.1.8.1.3

Item 1: Monoidality

We claim that Δ is indeed monoidal:

1. *Item 1a: Compatibility With Strong Monoidality Constraints:* We

need to show that the diagram

$$\begin{array}{ccc}
 X \times Y & \xrightarrow{\Delta_X \times \Delta_Y} & (X \times X) \times (Y \times Y) \\
 & \searrow \Delta_{X \times Y} & \downarrow \wr \\
 & & (X \times Y) \times (X \times Y)
 \end{array}$$

commutes. Indeed, this diagram acts on elements as

$$\begin{array}{ccccc}
 (x, y) & \longmapsto & ((x, x), (y, y)) & & (x, y) \\
 & & \downarrow & & \searrow \\
 & & ((x, y), (x, y)) & & ((x, y), (x, y))
 \end{array}$$

and hence indeed commutes.

2. *Item 1b: Compatibility With Strong Unitality Constraints:* As shown in the proof of [Definition 5.1.5.1.1](#), the inverse of the left unitor of **Sets** with respect to the product at $X \in \text{Obj}(\mathbf{Sets})$ is given by

$$\lambda_X^{\mathbf{Sets}, -1}(x) \stackrel{\text{def}}{=} (\star, x)$$

for each $x \in X$, so when $X = \text{pt}$, we have

$$\lambda_{\text{pt}}^{\mathbf{Sets}, -1}(\star) \stackrel{\text{def}}{=} (\star, \star),$$

and also

$$\Delta_{\text{pt}}^{\mathbf{Sets}}(\star) \stackrel{\text{def}}{=} (\star, \star),$$

so we have $\Delta_{\text{pt}} = \lambda_{\text{pt}}^{\mathbf{Sets}, -1}$.

This finishes the proof.

Item 2: The Diagonal of the Unit

This follows from [Item 1](#) and the invertibility of the left/right unitor of **Sets** with respect to \times , proved in the proof of [Definition 5.1.5.1.1](#) for the left unitor or the proof of [Definition 5.1.6.1.1](#) for the right unitor. 

5.1.9 The Monoidal Category of Sets and Products

PROPOSITION 5.1.9.1.1 ► THE MONOIDAL STRUCTURE ON SETS ASSOCIATED TO THE PRODUCT

The category **Sets** admits a closed symmetric monoidal category with diagonals structure consisting of:

- *The Underlying Category.* The category **Sets** of pointed sets.
- *The Monoidal Product.* The product functor

$$\times : \mathbf{Sets} \times \mathbf{Sets} \rightarrow \mathbf{Sets}$$

of **Constructions With Sets**, Item 1 of Proposition 4.1.3.1.4.

- *The Internal Hom.* The internal Hom functor

$$\mathbf{Sets} : \mathbf{Sets}^{\text{op}} \times \mathbf{Sets} \rightarrow \mathbf{Sets}$$

of **Constructions With Sets**, Item 1 of Proposition 4.3.5.1.2.

- *The Monoidal Unit.* The functor

$$\mathbb{1}^{\mathbf{Sets}} : \mathbf{pt} \rightarrow \mathbf{Sets}$$

of Definition 5.1.3.1.1.

- *The Associators.* The natural isomorphism

$$\alpha^{\mathbf{Sets}} : \times \circ (\times \times \text{id}_{\mathbf{Sets}}) \xrightarrow{\sim} \times \circ (\text{id}_{\mathbf{Sets}} \times \times) \circ \alpha_{\mathbf{Sets}, \mathbf{Sets}, \mathbf{Sets}}^{\mathbf{Cats}}$$

of Definition 5.1.4.1.1.

- *The Left Unitors.* The natural isomorphism

$$\lambda^{\mathbf{Sets}} : \times \circ (\mathbb{1}^{\mathbf{Sets}} \times \text{id}_{\mathbf{Sets}}) \xrightarrow{\sim} \lambda_{\mathbf{Sets}}^{\mathbf{Cats}_2}$$

of Definition 5.1.5.1.1.

- *The Right Unitors.* The natural isomorphism

$$\rho^{\mathbf{Sets}} : \times \circ (\text{id} \times \mathbb{1}^{\mathbf{Sets}}) \xrightarrow{\sim} \rho_{\mathbf{Sets}}^{\mathbf{Cats}_2}$$

of Definition 5.1.6.1.1.

- *The Symmetry.* The natural isomorphism

$$\sigma^{\mathbf{Sets}} : \times \xrightarrow{\sim} \times \circ \sigma_{\mathbf{Sets}, \mathbf{Sets}}^{\mathbf{Cats}_2}$$

of [Definition 5.1.7.1.1](#).

- *The Diagonals.* The monoidal natural transformation

$$\Delta : \text{id}_{\mathbf{Sets}} \Rightarrow \times \circ \Delta_{\mathbf{Sets}}^{\mathbf{Cats}_2}$$

of [Definition 5.1.8.1.1](#).

PROOF 5.1.9.1.2 ► PROOF OF PROPOSITION 5.1.9.1.1

The Pentagon Identity

Let W , X , Y and Z be sets. We have to show that the diagram

$$\begin{array}{ccccc}
 & & (W \times (X \times Y)) \times Z & & \\
 & \nearrow \alpha_{W, X, Y}^{\mathbf{Sets}} \times \text{id}_Z & & \searrow \alpha_{W, X \times Y, Z}^{\mathbf{Sets}} & \\
 ((W \times X) \times Y) \times Z & & & & W \times ((X \times Y) \times Z) \\
 \searrow \alpha_{W \times X, Y, Z}^{\mathbf{Sets}} & & & & \nearrow \text{id}_W \times \alpha_{X, Y, Z}^{\mathbf{Sets}} \\
 (W \times X) \times (Y \times Z) & \xrightarrow{\alpha_{W, X, Y \times Z}^{\mathbf{Sets}}} & W \times (X \times (Y \times Z)) & &
 \end{array}$$

commutes. Indeed, this diagram acts on elements as

and thus the pentagon identity is satisfied.

The Triangle Identity

Let X and Y be sets. We have to show that the diagram

$$\begin{array}{ccc}
 (X \times \text{pt}) \times Y & \xrightarrow{\alpha_{X, \text{pt}, Y}^{\text{Sets}}} & X \times (\text{pt} \times Y) \\
 \searrow \rho_X^{\text{Sets}} \times \text{id}_Y & & \swarrow \text{id}_X \times \lambda_Y^{\text{Sets}} \\
 & X \times Y &
 \end{array}$$

commutes. Indeed, this diagram acts on elements as

and thus the triangle identity is satisfied.

The Left Hexagon Identity

Let X , Y , and Z be sets. We have to show that the diagram

$$\begin{array}{ccc}
 & (X \times Y) \times Z & \\
 \alpha_{X,Y,Z}^{\text{Sets}} \swarrow & & \searrow \sigma_{X,Y}^{\text{Sets}} \times \text{id}_Z \\
 X \times (Y \times Z) & & (Y \times X) \times Z \\
 \downarrow \sigma_{X,Y \times Z}^{\text{Sets}} & & \downarrow \alpha_{Y,X,Z}^{\text{Sets}} \\
 (Y \times Z) \times X & & Y \times (X \times Z) \\
 \searrow \alpha_{Y,Z,X}^{\text{Sets}} & & \swarrow \text{id}_Y \times \sigma_{X,Z}^{\text{Sets}} \\
 & Y \times (Z \times X) &
 \end{array}$$

commutes. Indeed, this diagram acts on elements as

$$\begin{array}{ccc}
 & ((x, y), z) & ((x, y), z) \\
 \swarrow & & \searrow \\
 (x, (y, z)) & & ((y, x), z) \\
 \downarrow & & \downarrow \\
 ((y, z), x) & & (y, (x, z)) \\
 \searrow & & \swarrow \\
 (y, (z, x)) & & (y, (z, x))
 \end{array}$$

and thus the left hexagon identity is satisfied.

The Right Hexagon Identity

Let X , Y , and Z be sets. We have to show that the diagram

$$\begin{array}{ccc}
 & X \times (Y \times Z) & \\
 (\alpha_{X,Y,Z}^{\text{Sets}})^{-1} \swarrow & & \searrow \text{id}_X \times \sigma_{Y,Z}^{\text{Sets}} \\
 (X \times Y) \times Z & & X \times (Z \times Y) \\
 \downarrow \sigma_{X \times Y, Z}^{\text{Sets}} & & \downarrow (\alpha_{X,Z,Y}^{\text{Sets}})^{-1} \\
 Z \times (X \times Y) & & (X \times Z) \times Y \\
 & \swarrow (\alpha_{Z,X,Y}^{\text{Sets}})^{-1} & \nwarrow \sigma_{X,Z}^{\text{Sets}} \times \text{id}_Y \\
 & (Z \times X) \times Y &
 \end{array}$$

commutes. Indeed, this diagram acts on elements as

$$\begin{array}{ccc}
 & (x, (y, z)) & (x, (y, z)) \\
 \swarrow & & \searrow \\
 ((x, y), z) & & (x, (z, y)) \\
 \downarrow & & \downarrow \\
 (z, (x, y)) & & ((x, z), y) \\
 \searrow & & \swarrow \\
 ((z, x), y) & & ((z, x), y)
 \end{array}$$

and thus the right hexagon identity is satisfied.

Monoidal Closedness

This follows from **Constructions With Sets, Item 2** of **Proposition 4.3.5.1.2**

Existence of Monoidal Diagonals

This follows from **Items 1** and **2** of **Proposition 5.1.8.1.3**. 

5.1.10 The Universal Property of $(\mathbf{Sets}, \times, \text{pt})$

THEOREM 5.1.10.1.1 ► THE UNIVERSAL PROPERTY OF $(\mathbf{Sets}, \times, \text{pt})$

The symmetric monoidal structure on the category \mathbf{Sets} of [Proposition 5.1.9.1.1](#) is uniquely determined by the following requirements:

1. *Existence of an Internal Hom.* The tensor product

$$\otimes_{\mathbf{Sets}} : \mathbf{Sets} \times \mathbf{Sets} \rightarrow \mathbf{Sets}$$

of \mathbf{Sets} admits an internal Hom $[-1, -2]_{\mathbf{Sets}}$.

2. *The Unit Object Is pt.* We have $\mathbb{1}_{\mathbf{Sets}} \cong \text{pt}$.

More precisely, the full subcategory of the category $\mathcal{M}_{\mathbb{E}_{\infty}}^{\text{cl}}(\mathbf{Sets})$ of ?? spanned by the closed symmetric monoidal categories $(\mathbf{Sets}, \otimes_{\mathbf{Sets}}, [-1, -2]_{\mathbf{Sets}}, \mathbb{1}_{\mathbf{Sets}}, \lambda^{\mathbf{Sets}}, \rho^{\mathbf{Sets}}, \sigma^{\mathbf{Sets}})$ satisfying [Items 1](#) and [2](#) is contractible (i.e. equivalent to the punctual category).

PROOF 5.1.10.1.2 ► PROOF OF THEOREM 5.1.10.1.1

Unwinding the Statement

Let $(\mathbf{Sets}, \otimes_{\mathbf{Sets}}, [-1, -2]_{\mathbf{Sets}}, \mathbb{1}_{\mathbf{Sets}}, \lambda', \rho', \sigma')$ be a closed symmetric monoidal category satisfying [Items 1](#) and [2](#). We need to show that the identity functor

$$\text{id}_{\mathbf{Sets}} : \mathbf{Sets} \rightarrow \mathbf{Sets}$$

admits a *unique* closed symmetric monoidal functor structure

$$\begin{aligned} \text{id}_{\mathbf{Sets}}^{\otimes} : A \otimes_{\mathbf{Sets}} B &\xrightarrow{\sim} A \times B, \\ \text{id}_{\mathbf{Sets}}^{\text{Hom}} : [A, B]_{\mathbf{Sets}} &\xrightarrow{\sim} \mathbf{Sets}(A, B), \\ \text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes} : \mathbb{1}_{\mathbf{Sets}} &\xrightarrow{\sim} \text{pt}, \end{aligned}$$

making it into a symmetric monoidal strongly closed isomorphism of categories from $(\mathbf{Sets}, \otimes_{\mathbf{Sets}}, [-1, -2]_{\mathbf{Sets}}, \mathbb{1}_{\mathbf{Sets}}, \lambda', \rho', \sigma')$ to the closed symmetric monoidal category $(\mathbf{Sets}, \times, \mathbf{Sets}(-1, -2), \mathbb{1}_{\mathbf{Sets}}, \lambda^{\mathbf{Sets}}, \rho^{\mathbf{Sets}}, \sigma^{\mathbf{Sets}})$ of [Proposition 5.1.9.1.1](#).

Constructing an Isomorphism $[-1, -2]_{\mathbf{Sets}} \cong \mathbf{Sets}(-1, -2)$

By ??, we have a natural isomorphism

$$\mathbf{Sets}(\text{pt}, [-1, -2]_{\mathbf{Sets}}) \cong \mathbf{Sets}(-1, -2).$$

By **Constructions With Sets, Item 3** of **Proposition 4.3.5.1.2**, we also have a natural isomorphism

$$\mathbf{Sets}(\text{pt}, [-1, -2]_{\mathbf{Sets}}) \cong [-1, -2]_{\mathbf{Sets}}.$$

Composing both natural isomorphisms, we obtain a natural isomorphism

$$\mathbf{Sets}(-1, -2) \cong [-1, -2]_{\mathbf{Sets}}.$$

Given $A, B \in \text{Obj}(\mathbf{Sets})$, we will write

$$\text{id}_{A,B}^{\text{Hom}} : \mathbf{Sets}(A, B) \xrightarrow{\sim} [A, B]_{\mathbf{Sets}}$$

for the component of this isomorphism at (A, B) .

Constructing an Isomorphism $\otimes_{\mathbf{Sets}} \cong \times$

Since $\otimes_{\mathbf{Sets}}$ is adjoint in each variable to $[-1, -2]_{\mathbf{Sets}}$ by assumption and \times is adjoint in each variable to $\mathbf{Sets}(-1, -2)$ by **Constructions With Sets, Item 2** of **Proposition 4.3.5.1.2**, uniqueness of adjoints (??) gives us natural isomorphisms

$$\begin{aligned} A \otimes_{\mathbf{Sets}} - &\cong A \times -, \\ - \otimes_{\mathbf{Sets}} B &\cong B \times -. \end{aligned}$$

By ??, we then have $\otimes_{\mathbf{Sets}} \cong \times$. We will write

$$\text{id}_{\mathbf{Sets}|A,B}^{\otimes} : A \otimes_{\mathbf{Sets}} B \xrightarrow{\sim} A \times B$$

for the component of this isomorphism at (A, B) .

Alternative Construction of an Isomorphism $\otimes_{\mathbf{Sets}} \cong \times$

Alternatively, we may construct a natural isomorphism $\otimes_{\mathbf{Sets}} \cong \times$ as follows:

1. Let $A \in \text{Obj}(\mathbf{Sets})$.
2. Since $\otimes_{\mathbf{Sets}}$ is part of a closed monoidal structure, it preserves colimits in each variable by ??.
3. Since $A \cong \coprod_{a \in A} \text{pt}$ and $\otimes_{\mathbf{Sets}}$ preserves colimits in each variable, we have

$$\begin{aligned}
 A \otimes_{\mathbf{Sets}} B &\cong \left(\coprod_{a \in A} \text{pt} \right) \otimes_{\mathbf{Sets}} B \\
 &\cong \coprod_{a \in A} (\text{pt} \otimes_{\mathbf{Sets}} B) \\
 &\cong \coprod_{a \in A} B \\
 &\cong A \times B,
 \end{aligned}$$

naturally in $B \in \text{Obj}(\mathbf{Sets})$, where we have used that pt is the monoidal unit for $\otimes_{\mathbf{Sets}}$. Thus $A \otimes_{\mathbf{Sets}} - \cong A \times -$ for each $A \in \text{Obj}(\mathbf{Sets})$.

4. Similarly, $- \otimes_{\mathbf{Sets}} B \cong - \times B$ for each $B \in \text{Obj}(\mathbf{Sets})$.
5. By ??, we then have $\otimes_{\mathbf{Sets}} \cong \times$.

Below, we'll show that if a natural isomorphism $\otimes_{\mathbf{Sets}} \cong \times$ exists, then it must be unique. This will show that the isomorphism constructed above is equal to the isomorphism $\text{id}_{\mathbf{Sets}|A,B}^{\otimes}: A \otimes_{\mathbf{Sets}} B \rightarrow A \times B$ from before.

Constructing an Isomorphism $\text{id}_{\mathbf{1}}^{\otimes}: \mathbf{1}_{\mathbf{Sets}} \rightarrow \text{pt}$

We define an isomorphism $\text{id}_{\mathbf{1}}^{\otimes}: \mathbf{1}_{\mathbf{Sets}} \rightarrow \text{pt}$ as the composition

$$\mathbf{1}_{\mathbf{Sets}} \xrightarrow[\sim]{\rho_{\mathbf{1}_{\mathbf{Sets}}}^{\mathbf{Sets}, -1}} \mathbf{1}_{\mathbf{Sets}} \times \text{pt} \xrightarrow[\sim]{\text{id}_{\mathbf{Sets}|\mathbf{1}_{\mathbf{Sets}}}^{\otimes}} \mathbf{1}_{\mathbf{Sets}} \otimes_{\mathbf{Sets}} \text{pt} \xrightarrow[\sim]{\lambda'_{\text{pt}}} \text{pt}$$

in \mathbf{Sets} .

Monoidal Left Unity of the Isomorphism $\otimes_{\mathbf{Sets}} \cong \times$

We have to show that the diagram

$$\begin{array}{ccc}
 & \text{pt} \otimes_{\mathbf{Sets}} A & \xrightarrow{\text{id}_{\mathbf{Sets}| \text{pt}, A}^{\otimes}} \text{pt} \times A \\
 \text{id}_{\mathbf{1}|\mathbf{Sets}}^{\otimes} \otimes_{\mathbf{Sets}} \text{id}_A \nearrow & & \searrow \lambda_A^{\mathbf{Sets}} \\
 \mathbf{1}_{\mathbf{Sets}} \otimes_{\mathbf{Sets}} A & \xrightarrow{\lambda'_A} & A
 \end{array}$$

commutes. First, note that the diagram

$$\begin{array}{ccc}
 & \text{pt} \otimes_{\mathbf{Sets}} \text{pt} & \xrightarrow{\text{id}_{\mathbf{Sets}| \text{pt}, \text{pt}}^{\otimes}} \text{pt} \times \text{pt} \\
 \text{id}_{\mathbf{1}|\mathbf{Sets}}^{\otimes} \otimes_{\mathbf{Sets}} \text{id}_{\text{pt}} \nearrow & & \searrow \lambda_{\text{pt}}^{\mathbf{Sets}} \\
 \mathbf{1}_{\mathbf{Sets}} \otimes_{\mathbf{Sets}} \text{pt} & \xrightarrow{\lambda'_{\text{pt}}} & \text{pt},
 \end{array}$$

corresponding to the case $A = \text{pt}$, commutes by the terminality of pt (**Constructions With Sets, Construction 4.1.1.1.2**). Since this diagram commutes, so does the diagram

$$\begin{array}{ccc}
 & \text{pt} \times \text{pt} & \xrightarrow{\text{id}_{\mathbf{Sets}| \text{pt}, \text{pt}}^{\otimes, -1}} \text{pt} \otimes_{\mathbf{Sets}} \text{pt} \\
 \lambda_{\text{pt}}^{\mathbf{Sets}, -1} \nearrow & & \searrow \text{id}_{\mathbf{1}|\mathbf{Sets}}^{\otimes, -1} \otimes_{\mathbf{Sets}} \text{id}_{\text{pt}} \\
 \text{pt} & \xrightarrow{\lambda'_{\text{pt}}, -1} & \mathbf{1}_{\mathbf{Sets}} \otimes_{\mathbf{Sets}} \text{pt}.
 \end{array}
 \quad (\dagger)$$

Now, let $A \in \text{Obj}(\mathbf{Sets})$, let $a \in A$, and consider the diagram

$$\begin{array}{ccccc}
 & & \text{pt} \times \text{pt} & \xrightarrow{\text{id}_{\mathbf{Sets}|\text{pt}, \text{pt}}^{\otimes, -1}} & \text{pt} \otimes_{\mathbf{Sets}} \text{pt} \\
 & \nearrow \lambda_{\text{pt}}^{\mathbf{Sets}, -1} & & \text{(\dagger)} & \searrow \text{id}_{\mathbf{Sets}}^{\otimes, -1} \times \text{id}_{\text{pt}} \\
 \text{pt} & \xrightarrow{\lambda_{\text{pt}}^{\mathbf{Sets}, -1}} & \text{pt} \times \text{pt} & \xrightarrow{\lambda_{\text{pt}}'^{-1}} & \mathbb{1}_{\mathbf{Sets}} \otimes_{\mathbf{Sets}} \text{pt} \\
 & \downarrow \text{id}_{\text{pt}} \times [a] & & \downarrow \text{id}_{\text{pt}} \otimes_{\mathbf{Sets}} [a] & \downarrow \text{id}_{\mathbb{1}_{\mathbf{Sets}}} \times [a] \\
 & (3) & & (4) & \\
 & \downarrow & & \downarrow & \\
 & \text{pt} \times A & \xrightarrow{\text{id}_{\mathbf{Sets}|\text{pt}, A}^{\otimes, -1}} & \text{pt} \otimes_{\mathbf{Sets}} A & \\
 & \nearrow \lambda_A^{\mathbf{Sets}, -1} & & \searrow \text{id}_{\mathbb{1}_{\mathbf{Sets}}}^{\otimes, -1} \times \text{id}_A & \\
 A & \xrightarrow{\lambda_A^{\mathbf{Sets}, -1}} & \text{pt} \times A & \xrightarrow{\lambda_A'^{-1}} & \mathbb{1}_{\mathbf{Sets}} \otimes_{\mathbf{Sets}} A. \\
 & & \text{(\dagger)} & & \\
 & & (5) & &
 \end{array}$$

Since:

- Subdiagram (5) commutes by the naturality of λ'^{-1} .
- Subdiagram (†) commutes, as proved above.
- Subdiagram (4) commutes by the naturality of $\text{id}_{\mathbb{1}_{\mathbf{Sets}}}^{\otimes, -1}$.
- Subdiagram (1) commutes by the naturality of $\text{id}_{\mathbf{Sets}}^{\otimes, -1}$.
- Subdiagram (3) commutes by the naturality of $\lambda^{\mathbf{Sets}, -1}$.

it follows that the diagram

$$\begin{array}{ccccc}
 & & \text{pt} \times A & \xrightarrow{\text{id}_{\mathbf{Sets}|\text{pt}, A}^{\otimes, -1}} & \text{pt} \otimes_{\mathbf{Sets}} A \\
 & \nearrow \lambda_A^{\mathbf{Sets}, -1} & & & \searrow \text{id}_{\mathbb{1}_{\mathbf{Sets}}}^{\otimes, -1} \otimes_{\mathbf{Sets}} \text{id}_A \\
 \text{pt} & \xrightarrow{[a]} & A & \xrightarrow{\lambda_A'^{-1}} & \mathbb{1}_{\mathbf{Sets}} \otimes_{\mathbf{Sets}} A
 \end{array}$$

Here's a step-by-step showcase of this argument: [\[Link\]](#). We then have

$$\lambda_A'^{-1}(a) = [\lambda_A'^{-1} \circ [a]](\star)$$

$$\begin{aligned}
&= \left[\left(\text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes, -1} \times \text{id}_A \right) \circ \text{id}_{\mathbf{Sets}|\text{pt}, A}^{\otimes, -1} \circ \lambda_A^{\mathbf{Sets}, -1} \circ [a] \right] (\star) \\
&= \left[\left(\text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes, -1} \times \text{id}_A \right) \circ \text{id}_{\mathbf{Sets}|\text{pt}, A}^{\otimes, -1} \circ \lambda_A^{\mathbf{Sets}, -1} \right] (a)
\end{aligned}$$

for each $a \in A$, and thus we have

$$\lambda_A'^{-1} = \left(\text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes, -1} \times \text{id}_A \right) \circ \text{id}_{\mathbf{Sets}|\text{pt}, A}^{\otimes, -1} \circ \lambda_A^{\mathbf{Sets}, -1}.$$

Taking inverses then gives

$$\lambda_A' = \lambda_A^{\mathbf{Sets}} \circ \text{id}_{\mathbf{Sets}|\text{pt}, A}^{\otimes} \circ \left(\text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes} \times \text{id}_A \right),$$

showing that the diagram

$$\begin{array}{ccc}
& \text{pt} \otimes_{\mathbf{Sets}} A & \xrightarrow{\text{id}_{\mathbf{Sets}|\text{pt}, A}^{\otimes}} \text{pt} \times A \\
\text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes} \otimes_{\mathbf{Sets}} \text{id}_A \nearrow & & \searrow \lambda_A^{\mathbf{Sets}} \\
\mathbb{1}_{\mathbf{Sets}} \otimes_{\mathbf{Sets}} A & \xrightarrow{\lambda_A'} & A
\end{array}$$

indeed commutes.

Monoidal Right Unity of the Isomorphism $\otimes_{\mathbf{Sets}} \cong \times$

We can use the same argument we used to prove the monoidal left unity of the isomorphism $\otimes_{\mathbf{Sets}} \cong \times$ above. For completeness, we repeat it below.

We have to show that the diagram

$$\begin{array}{ccc}
& A \otimes_{\mathbf{Sets}} \text{pt} & \xrightarrow{\text{id}_{\mathbf{Sets}|A, \text{pt}}^{\otimes}} A \times \text{pt} \\
\text{id}_A \otimes_{\mathbf{Sets}} \text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes} \nearrow & & \searrow \rho_A^{\mathbf{Sets}} \\
A \otimes_{\mathbf{Sets}} \mathbb{1}_{\mathbf{Sets}} & \xrightarrow{\rho_A'} & A
\end{array}$$

commutes. First, note that the diagram

$$\begin{array}{ccc}
& \text{pt} \otimes_{\mathbf{Sets}} \text{pt} & \xrightarrow{\text{id}_{\mathbf{Sets}|\text{pt}, \text{pt}}^{\otimes}} \text{pt} \times \text{pt} \\
\text{id}_{\text{pt}} \otimes_{\mathbf{Sets}} \text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes} \nearrow & & \searrow \rho_{\text{pt}}^{\mathbf{Sets}} \\
\text{pt} \otimes_{\mathbf{Sets}} \mathbb{1}_{\mathbf{Sets}} & \xrightarrow{\rho_{\text{pt}}'} & \text{pt},
\end{array}$$

corresponding to the case $A = \mathbf{pt}$, commutes by the terminality of \mathbf{pt} (**Constructions With Sets, Construction 4.1.1.2**). Since this diagram commutes, so does the diagram

$$\begin{array}{ccc}
 & \mathbf{pt} \times \mathbf{pt} & \xrightarrow{\mathrm{id}_{\mathbf{Sets}|\mathbf{pt},\mathbf{pt}}^{\otimes,-1}} \mathbf{pt} \otimes_{\mathbf{Sets}} \mathbf{pt} \\
 \nearrow \rho_{\mathbf{pt}}^{\mathbf{Sets},-1} & & \searrow \mathrm{id}_{\mathbf{pt}} \otimes_{\mathbf{Sets}} \mathrm{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes,-1} \\
 \mathbf{pt} & \xrightarrow{\rho_{\mathbf{pt}}'^{-1}} & \mathbf{pt} \otimes_{\mathbf{Sets}} \mathbb{1}_{\mathbf{Sets}}.
 \end{array}
 \quad (\dagger)$$

Now, let $A \in \mathbf{Obj}(\mathbf{Sets})$, let $a \in A$, and consider the diagram

$$\begin{array}{ccccc}
 & \mathbf{pt} \times \mathbf{pt} & \xrightarrow{\mathrm{id}_{\mathbf{Sets}|\mathbf{pt},\mathbf{pt}}^{\otimes,-1}} & \mathbf{pt} \otimes_{\mathbf{Sets}} \mathbf{pt} & \\
 \nearrow \rho_{\mathbf{pt}}^{\mathbf{Sets},-1} & & & \searrow \mathrm{id}_{\mathbf{pt}} \otimes_{\mathbf{Sets}} \mathrm{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes,-1} & \\
 \mathbf{pt} & \xrightarrow{\rho_{\mathbf{pt}}'^{-1}} & \mathbf{pt} \otimes_{\mathbf{Sets}} \mathbb{1}_{\mathbf{Sets}} & & \\
 \downarrow [a] & \downarrow \mathrm{id}_{\mathbf{pt}} \times [a] & \downarrow \mathrm{id}_{\mathbf{pt}} \otimes_{\mathbf{Sets}} [a] & \downarrow \mathrm{id}_{\mathbb{1}_{\mathbf{Sets}}} \times [a] & \\
 & A \times \mathbf{pt} & \xrightarrow{\mathrm{id}_{\mathbf{Sets}|A,\mathbf{pt}}^{\otimes,-1}} & A \otimes_{\mathbf{Sets}} \mathbf{pt} & \\
 \nearrow \rho_A^{\mathbf{Sets},-1} & & & \searrow \mathrm{id}_A \otimes_{\mathbf{Sets}} \mathrm{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes,-1} & \\
 A & \xrightarrow{\rho_A'^{-1}} & A \otimes_{\mathbf{Sets}} \mathbb{1}_{\mathbf{Sets}} & &
 \end{array}$$

(3) (1) (4) (5) (2)

Since:

- Subdiagram (5) commutes by the naturality of ρ'^{-1} .
- Subdiagram (\dagger) commutes, as proved above.
- Subdiagram (4) commutes by the naturality of $\mathrm{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes,-1}$.
- Subdiagram (1) commutes by the naturality of $\mathrm{id}_{\mathbf{Sets}}^{\otimes,-1}$.
- Subdiagram (3) commutes by the naturality of $\rho^{\mathbf{Sets},-1}$.

it follows that the diagram

$$\begin{array}{ccccc}
 & & A \times \text{pt} & \xrightarrow{\text{id}_{\mathbf{Sets}|A, \text{pt}}^{\otimes, -1}} & A \otimes_{\mathbf{Sets}} \text{pt} \\
 & \nearrow \rho_A^{\mathbf{Sets}, -1} & & & \searrow \text{id}_A \otimes_{\mathbf{Sets}} \text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes, -1} \\
 \text{pt} & \xrightarrow{[a]} & A & \xrightarrow{\rho'_A{}^{-1}} & A \otimes_{\mathbf{Sets}} \mathbb{1}_{\mathbf{Sets}}
 \end{array}$$

Here's a step-by-step showcase of this argument: [\[Link\]](#). We then have

$$\begin{aligned}
 \rho'_A{}^{-1}(a) &= [\rho'_A{}^{-1} \circ [a]](\star) \\
 &= [(\text{id}_A \times \text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes, -1}) \circ \text{id}_{\mathbf{Sets}|\text{pt}, A}^{\otimes, -1} \circ \rho_A^{\mathbf{Sets}, -1} \circ [a]](\star) \\
 &= [(\text{id}_A \times \text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes, -1}) \circ \text{id}_{\mathbf{Sets}|\text{pt}, A}^{\otimes, -1} \circ \rho_A^{\mathbf{Sets}, -1}](a)
 \end{aligned}$$

for each $a \in A$, and thus we have

$$\rho'_A{}^{-1} = (\text{id}_A \times \text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes, -1}) \circ \text{id}_{\mathbf{Sets}|\text{pt}, A}^{\otimes, -1} \circ \rho_A^{\mathbf{Sets}, -1}.$$

Taking inverses then gives

$$\rho'_A = \rho_A^{\mathbf{Sets}} \circ \text{id}_{\mathbf{Sets}|\text{pt}, A}^{\otimes} \circ (\text{id}_A \times \text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes}),$$

showing that the diagram

$$\begin{array}{ccccc}
 & & A \otimes_{\mathbf{Sets}} \text{pt} & \xrightarrow{\text{id}_{\mathbf{Sets}|A, \text{pt}}^{\otimes}} & A \times \text{pt} \\
 & \nearrow \text{id}_A \otimes_{\mathbf{Sets}} \text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes} & & & \searrow \rho_A^{\mathbf{Sets}} \\
 A \otimes_{\mathbf{Sets}} \mathbb{1}_{\mathbf{Sets}} & \xrightarrow{\rho'_A} & A & &
 \end{array}$$

indeed commutes.

Monoidality of the Isomorphism $\otimes_{\mathbf{Sets}} \cong \times$

We have to show that the diagram

$$\begin{array}{ccc}
 & (A \otimes_{\mathbf{Sets}} B) \otimes_{\mathbf{Sets}} C & \\
 \text{id}_{\mathbf{Sets}|A,B}^{\otimes} \otimes_{\mathbf{Sets}} \text{id}_C \swarrow & & \searrow \alpha'_{A,B,C} \\
 (A \times B) \otimes_{\mathbf{Sets}} C & & A \otimes_{\mathbf{Sets}} (B \otimes_{\mathbf{Sets}} C) \\
 \downarrow \text{id}_{\mathbf{Sets}|A \times B,C}^{\otimes} & & \downarrow \text{id}_A \otimes_{\mathbf{Sets}} \text{id}_{\mathbf{Sets}|B,C}^{\otimes} \\
 (A \times B) \times C & & A \otimes_{\mathbf{Sets}} (B \times C) \\
 & \searrow \alpha_{A,B,C}^{\mathbf{Sets}} & \swarrow \text{id}_{\mathbf{Sets}|A,B \times C}^{\otimes} \\
 & A \times (B \times C) &
 \end{array}$$

commutes. First, note that the diagram

$$\begin{array}{ccc}
 & (\mathbf{pt} \otimes_{\mathbf{Sets}} \mathbf{pt}) \otimes_{\mathbf{Sets}} \mathbf{pt} & \\
 \text{id}_{\mathbf{Sets}|\mathbf{pt},\mathbf{pt}}^{\otimes} \otimes_{\mathbf{Sets}} \text{id}_{\mathbf{pt}} \swarrow & & \searrow \alpha'_{\mathbf{pt},\mathbf{pt},\mathbf{pt}} \\
 (\mathbf{pt} \times \mathbf{pt}) \otimes_{\mathbf{Sets}} \mathbf{pt} & & \mathbf{pt} \otimes_{\mathbf{Sets}} (\mathbf{pt} \otimes_{\mathbf{Sets}} \mathbf{pt}) \\
 \downarrow \text{id}_{\mathbf{Sets}|\mathbf{pt} \times \mathbf{pt},\mathbf{pt}}^{\otimes} & & \downarrow \text{id}_{\mathbf{pt}} \otimes_{\mathbf{Sets}} \text{id}_{\mathbf{Sets}|\mathbf{pt},\mathbf{pt}}^{\otimes} \\
 (\mathbf{pt} \times \mathbf{pt}) \times \mathbf{pt} & & \mathbf{pt} \otimes_{\mathbf{Sets}} (\mathbf{pt} \times \mathbf{pt}) \\
 & \searrow \alpha_{\mathbf{pt},\mathbf{pt},\mathbf{pt}}^{\mathbf{Sets}} & \swarrow \text{id}_{\mathbf{Sets}|\mathbf{pt},\mathbf{pt} \times \mathbf{pt}}^{\otimes} \\
 & \mathbf{pt} \times (\mathbf{pt} \times \mathbf{pt}) & \\
 & \downarrow !_{\mathbf{pt} \times (\mathbf{pt} \times \mathbf{pt})} & \\
 & \mathbf{pt} &
 \end{array}$$

commutes by the terminality of \mathbf{pt} ([Constructions With Sets, Construction 4.1.1.1.2](#)). Since the map $!_{\mathbf{pt} \times (\mathbf{pt} \times \mathbf{pt})} : \mathbf{pt} \times (\mathbf{pt} \times \mathbf{pt}) \rightarrow \mathbf{pt}$ is an isomorphism (e.g. having inverse $\lambda_{\mathbf{pt}}^{\mathbf{Sets}, -1} \circ \lambda_{\mathbf{pt}}^{\mathbf{Sets}, -1}$), it follows that the

diagram

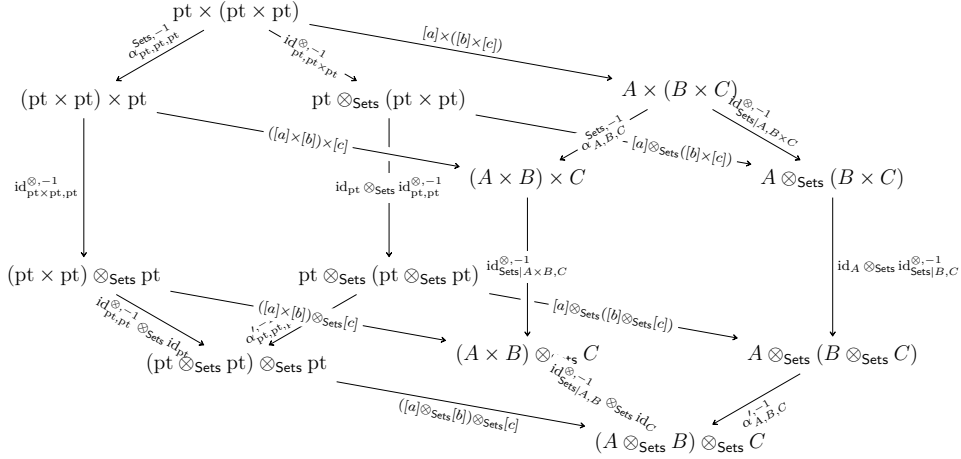

$$\begin{array}{ccc}
 & (\text{pt} \otimes_{\mathbf{Sets}} \text{pt}) \otimes_{\mathbf{Sets}} \text{pt} & \\
 \text{id}_{\mathbf{Sets}|\text{pt},\text{pt}}^{\otimes} \otimes_{\mathbf{Sets}} \text{id}_{\text{pt}} \swarrow & & \searrow \alpha_{\text{pt},\text{pt},\text{pt}} \\
 (\text{pt} \times \text{pt}) \otimes_{\mathbf{Sets}} \text{pt} & & \text{pt} \otimes_{\mathbf{Sets}} (\text{pt} \otimes_{\mathbf{Sets}} \text{pt}) \\
 \downarrow \text{id}_{\mathbf{Sets}|\text{pt} \times \text{pt},\text{pt}}^{\otimes} & & \downarrow \text{id}_{\text{pt}} \otimes_{\mathbf{Sets}} \text{id}_{\mathbf{Sets}|\text{pt},\text{pt}}^{\otimes} \\
 (\text{pt} \times \text{pt}) \times \text{pt} & & \text{pt} \otimes_{\mathbf{Sets}} (\text{pt} \times \text{pt}) \\
 \searrow \alpha_{\text{pt},\text{pt},\text{pt}}^{\mathbf{Sets}} & & \swarrow \text{id}_{\mathbf{Sets}|\text{pt},\text{pt} \times \text{pt}}^{\otimes} \\
 & \text{pt} \times (\text{pt} \times \text{pt}) &
 \end{array}$$

also commutes. Taking inverses, we see that the diagram

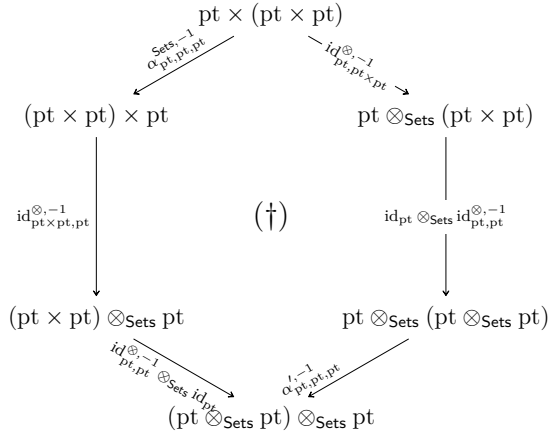

$$\begin{array}{ccc}
 & \text{pt} \times (\text{pt} \times \text{pt}) & \\
 \alpha_{\text{pt},\text{pt},\text{pt}}^{\mathbf{Sets},-1} \swarrow & & \searrow \text{id}_{\mathbf{Sets}|\text{pt},\text{pt} \times \text{pt}}^{\otimes,-1} \\
 (\text{pt} \times \text{pt}) \times \text{pt} & & \text{pt} \otimes_{\mathbf{Sets}} (\text{pt} \times \text{pt}) \\
 \downarrow \text{id}_{\mathbf{Sets}|\text{pt} \times \text{pt},\text{pt}}^{\otimes,-1} & (\dagger) & \downarrow \text{id}_{\text{pt}} \otimes_{\mathbf{Sets}} \text{id}_{\mathbf{Sets}|\text{pt},\text{pt}}^{\otimes,-1} \\
 (\text{pt} \times \text{pt}) \otimes_{\mathbf{Sets}} \text{pt} & & \text{pt} \otimes_{\mathbf{Sets}} (\text{pt} \otimes_{\mathbf{Sets}} \text{pt}) \\
 \text{id}_{\mathbf{Sets}|\text{pt},\text{pt}}^{\otimes,-1} \otimes_{\mathbf{Sets}} \text{id}_{\text{pt}} \swarrow & & \swarrow \alpha_{\text{pt},\text{pt},\text{pt}}^{\prime,-1} \\
 & (\text{pt} \otimes_{\mathbf{Sets}} \text{pt}) \otimes_{\mathbf{Sets}} \text{pt} &
 \end{array}$$

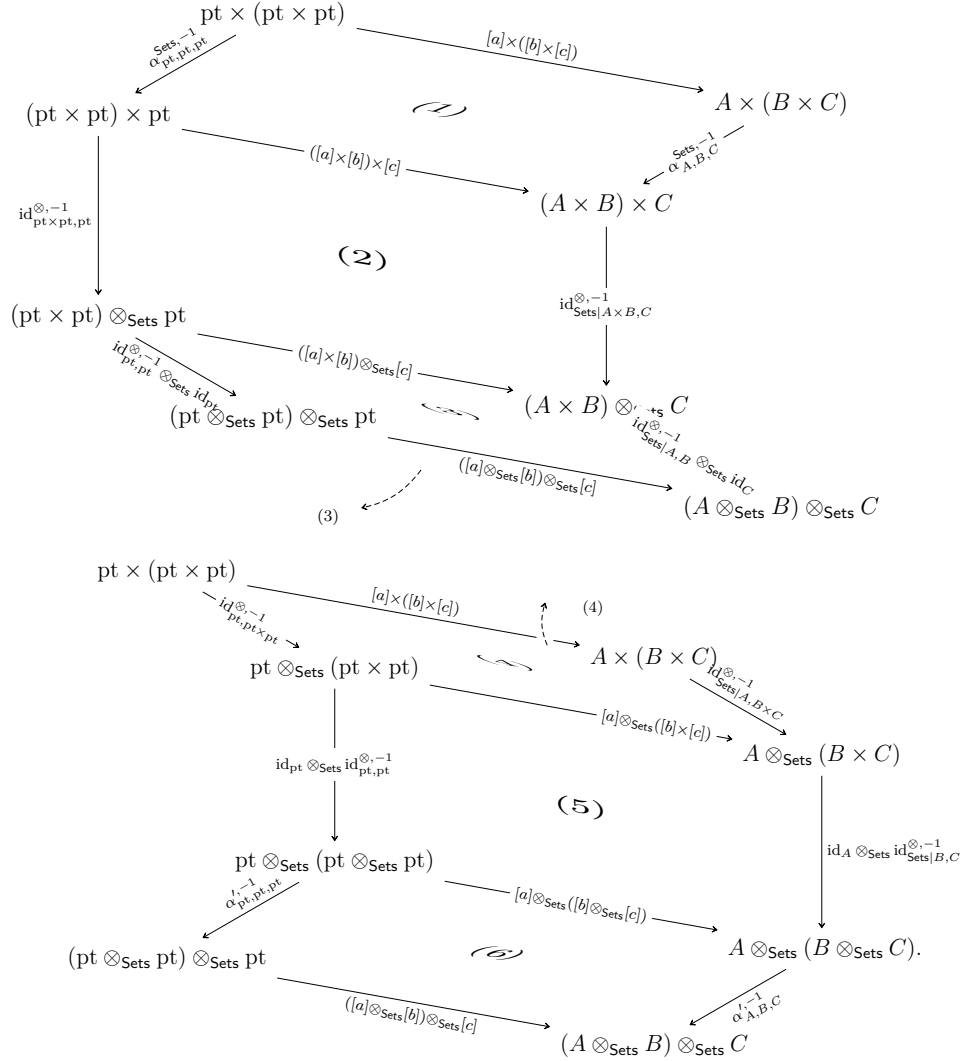

commutes as well. Now, let $A, B, C \in \text{Obj}(\mathbf{Sets})$, let $a \in A$, let $b \in B$,

let $c \in C$, and consider the diagram

which we partition into subdiagrams as follows:

Since:

- Subdiagram (1) commutes by the naturality of $\alpha^{\mathbf{Sets}, -1}$.
- Subdiagram (2) commutes by the naturality of $\text{id}_{\mathbf{Sets}}^{\otimes, -1}$.
- Subdiagram (3) commutes by the naturality of $\text{id}_{\mathbf{Sets}}^{\otimes, -1}$.
- Subdiagram (†) commutes, as proved above.

- Subdiagram (4) commutes by the naturality of $\text{id}_{\mathbf{Sets}}^{\otimes, -1}$.
- Subdiagram (5) commutes by the naturality of $\text{id}_{\mathbf{Sets}}^{\otimes, -1}$.
- Subdiagram (6) commutes by the naturality of α'^{-1} .

it follows that the diagram

$$\begin{array}{ccc}
 & \text{pt} \times (\text{pt} \times \text{pt}) & \\
 & \downarrow [a] \times ([b] \times [c]) & \\
 & A \times (B \times C) & \\
 \alpha_{A,B,C}^{\mathbf{Sets}, -1} \swarrow & & \searrow \text{id}_{\mathbf{Sets}|A, B \times C}^{\otimes, -1} \\
 (A \times B) \times C & & A \otimes_{\mathbf{Sets}} (B \times C) \\
 \downarrow \text{id}_{\mathbf{Sets}|A \times B, C}^{\otimes, -1} & & \downarrow \text{id}_A \times \text{id}_{\mathbf{Sets}|B, C}^{\otimes, -1} \\
 (A \times B) \otimes_{\mathbf{Sets}} C & & A \otimes_{\mathbf{Sets}} (B \otimes_{\mathbf{Sets}} C) \\
 \swarrow \text{id}_{\mathbf{Sets}|A, B}^{\otimes, -1} \otimes_{\mathbf{Sets}} \text{id}_C & & \swarrow \alpha'_{A,B,C}{}^{-1} \\
 (A \otimes_{\mathbf{Sets}} B) \otimes_{\mathbf{Sets}} C & &
 \end{array}$$

also commutes. We then have

$$\begin{aligned}
 & \left[\left(\text{id}_{\mathbf{Sets}|A, B}^{\otimes, -1} \otimes_{\mathbf{Sets}} \text{id}_C \right) \circ \text{id}_{\mathbf{Sets}|A \times B, C}^{\otimes, -1} \right. \\
 & \quad \left. \circ \alpha_{A,B,C}^{\mathbf{Sets}, -1} \right] (a, (b, c)) = \left[\left(\text{id}_{\mathbf{Sets}|A, B}^{\otimes, -1} \otimes_{\mathbf{Sets}} \text{id}_C \right) \circ \text{id}_{\mathbf{Sets}|A \times B, C}^{\otimes, -1} \right. \\
 & \quad \left. \circ \alpha_{A,B,C}^{\mathbf{Sets}, -1} \circ ([a] \times ([b] \times [c])) \right] (\star, (\star, \star)) \\
 & = \left[\alpha'_{A,B,C}{}^{-1} \circ \left(\text{id}_A \times \text{id}_{\mathbf{Sets}|B, C}^{\otimes, -1} \right) \right. \\
 & \quad \left. \circ \text{id}_{\mathbf{Sets}|A, B \times C}^{\otimes, -1} \circ ([a] \times ([b] \times [c])) \right] (\star, (\star, \star)) \\
 & = \left[\alpha'_{A,B,C}{}^{-1} \circ \left(\text{id}_A \times \text{id}_{\mathbf{Sets}|B, C}^{\otimes, -1} \right) \circ \text{id}_{\mathbf{Sets}|A, B \times C}^{\otimes, -1} \right] (a, (b, c))
 \end{aligned}$$

for each $(a, (b, c)) \in A \times (B \times C)$, and thus we have

$$\left(\text{id}_{\mathbf{Sets}|A, B}^{\otimes, -1} \otimes_{\mathbf{Sets}} \text{id}_C \right) \circ \text{id}_{\mathbf{Sets}|A \times B, C}^{\otimes, -1} \circ \alpha_{A,B,C}^{\mathbf{Sets}, -1} = \alpha'_{A,B,C}{}^{-1} \circ \left(\text{id}_A \times \text{id}_{\mathbf{Sets}|B, C}^{\otimes, -1} \right) \circ \text{id}_{\mathbf{Sets}|A, B \times C}^{\otimes, -1}.$$

Taking inverses then gives

$$\alpha_{A,B,C}^{\mathbf{Sets}} \circ \text{id}_{\mathbf{Sets}|A \times B, C}^{\otimes} \circ (\text{id}_{\mathbf{Sets}|A, B}^{\otimes} \otimes_{\mathbf{Sets}} \text{id}_C) = \text{id}_{\mathbf{Sets}|A, B \times C}^{\otimes} \circ (\text{id}_A \times \text{id}_{\mathbf{Sets}|B, C}^{\otimes}) \circ \alpha'_{A,B,C},$$

showing that the diagram

$$\begin{array}{ccc}
 (A \otimes_{\mathbf{Sets}} B) \otimes_{\mathbf{Sets}} C & \xrightarrow{\alpha'_{A,B,C}} & A \otimes_{\mathbf{Sets}} (B \otimes_{\mathbf{Sets}} C) \\
 \text{id}_{\mathbf{Sets}|A, B}^{\otimes} \otimes_{\mathbf{Sets}} \text{id}_C \swarrow & & \searrow \alpha'_{A,B,C} \\
 (A \times B) \otimes_{\mathbf{Sets}} C & & A \otimes_{\mathbf{Sets}} (B \otimes_{\mathbf{Sets}} C) \\
 \downarrow \text{id}_{\mathbf{Sets}|A \times B, C}^{\otimes} & & \downarrow \text{id}_A \otimes_{\mathbf{Sets}} \text{id}_{\mathbf{Sets}|B, C}^{\otimes} \\
 (A \times B) \times C & & A \otimes_{\mathbf{Sets}} (B \times C) \\
 \searrow \alpha_{A,B,C}^{\mathbf{Sets}} & & \swarrow \text{id}_{\mathbf{Sets}|A, B \times C}^{\otimes} \\
 & A \times (B \times C) &
 \end{array}$$

indeed commutes.

Braidedness of the Isomorphism $\otimes_{\mathbf{Sets}} \cong \times$

We have to show that the diagram

$$\begin{array}{ccc}
 A \otimes_{\mathbf{Sets}} B & \xrightarrow{\text{id}_{\mathbf{Sets}|A, B}^{\otimes}} & A \times B \\
 \sigma'_{A,B} \downarrow & & \downarrow \sigma_{A,B}^{\mathbf{Sets}} \\
 B \otimes_{\mathbf{Sets}} A & \xrightarrow{\text{id}_{\mathbf{Sets}|B, A}^{\otimes}} & B \times A
 \end{array}$$

commutes. First, note that the diagram

$$\begin{array}{ccc}
 \text{pt} \otimes_{\mathbf{Sets}} \text{pt} & \xrightarrow{\text{id}_{\mathbf{Sets}|\text{pt}, \text{pt}}^{\otimes}} & \text{pt} \times \text{pt} \\
 \sigma'_{\text{pt}, \text{pt}} \downarrow & & \downarrow \sigma_{\text{pt}, \text{pt}}^{\mathbf{Sets}} \\
 \text{pt} \otimes_{\mathbf{Sets}} \text{pt} & \xrightarrow{\text{id}_{\mathbf{Sets}|\text{pt}, \text{pt}}^{\otimes}} & \text{pt} \times \text{pt} \\
 & & \searrow !_{\text{pt} \times \text{pt}} \\
 & & \text{pt}
 \end{array}$$

commutes by the terminality of pt ([Constructions With Sets, Construction 4.1.1.1.2](#)). Since the map $!_{\text{pt} \times \text{pt}} : \text{pt} \times \text{pt} \rightarrow \text{pt}$ is invertible (e.g. with inverse $\lambda_{\text{pt}}^{\mathbf{Sets}, -1}$), the diagram

$$\begin{array}{ccc} \text{pt} \otimes_{\mathbf{Sets}} \text{pt} & \xrightarrow{\text{id}_{\mathbf{Sets}|\text{pt}, \text{pt}}^{\otimes}} & \text{pt} \times \text{pt} \\ \sigma'_{\text{pt}, \text{pt}} \downarrow & & \downarrow \sigma_{\text{pt}, \text{pt}}^{\mathbf{Sets}} \\ \text{pt} \otimes_{\mathbf{Sets}} \text{pt} & \xrightarrow{\text{id}_{\mathbf{Sets}|\text{pt}, \text{pt}}^{\otimes}} & \text{pt} \times \text{pt} \end{array}$$

also commutes. Taking inverses, we see that the diagram

$$\begin{array}{ccc} \text{pt} \times \text{pt} & \xrightarrow{\text{id}_{\mathbf{Sets}|\text{pt}, \text{pt}}^{\otimes, -1}} & \text{pt} \otimes_{\mathbf{Sets}} \text{pt} \\ \sigma_{\text{pt}, \text{pt}}^{\mathbf{Sets}, -1} \downarrow & (\dagger) & \downarrow \sigma'_{\text{pt}, \text{pt}}{}^{-1} \\ \text{pt} \times \text{pt} & \xrightarrow{\text{id}_{\mathbf{Sets}|\text{pt}, \text{pt}}^{\otimes, -1}} & \text{pt} \otimes_{\mathbf{Sets}} \text{pt} \end{array}$$

commutes as well. Now, let $A, B \in \text{Obj}(\mathbf{Sets})$, let $a \in A$, let $b \in B$, and

consider the diagram

$$\begin{array}{ccccc}
 \text{pt} \times \text{pt} & \xrightarrow{\text{id}_{\text{pt}, \text{pt}}^{\otimes, -1}} & \text{pt} \otimes_{\mathbf{Sets}} \text{pt} & & \\
 \downarrow \sigma_{\text{pt}, \text{pt}}^{\mathbf{Sets}, -1} & \searrow [b] \times [a] & \downarrow \sigma'_{\text{pt}, \text{pt}}{}^{-1} & \searrow [b] \otimes_{\mathbf{Sets}} [a] & \\
 & & B \times A & \xrightarrow{\text{id}_{\mathbf{Sets}|B, A}^{\otimes, -1}} & B \otimes_{\mathbf{Sets}} A \\
 & & \downarrow \sigma_{A, B}^{\mathbf{Sets}, -1} & & \downarrow \sigma'_{A, B}{}^{-1} \\
 \text{pt} \times \text{pt} & \xrightarrow{\text{id}_{\text{pt}, \text{pt}}^{\otimes, -1}} & \text{pt} \otimes_{\mathbf{Sets}} \text{pt} & & \\
 \searrow [a] \times [b] & & \searrow [a] \otimes_{\mathbf{Sets}} [b] & & \\
 & & A \times B & \xrightarrow{\text{id}_{\mathbf{Sets}|A, B}^{\otimes, -1}} & A \otimes_{\mathbf{Sets}} B
 \end{array}$$

which we partition into subdiagrams as follows:

$$\begin{array}{ccc}
 \begin{array}{c}
 \text{pt} \times \text{pt} \xrightarrow{\text{id}_{\text{pt}, \text{pt}}^{\otimes, -1}} \text{pt} \otimes_{\mathbf{Sets}} \text{pt} \\
 \downarrow \sigma_{\text{pt}, \text{pt}}^{\mathbf{Sets}, -1} \quad \searrow [b] \times [a] \quad \swarrow [b] \otimes_{\mathbf{Sets}} [a] \\
 B \times A \xrightarrow{\text{id}_{\mathbf{Sets}|B, A}^{\otimes, -1}} B \otimes_{\mathbf{Sets}} A \\
 \downarrow \sigma_{A, B}^{\mathbf{Sets}, -1} \quad \searrow [a] \times [b] \quad \swarrow [a] \otimes_{\mathbf{Sets}} [b] \\
 A \times B \xrightarrow{\text{id}_{\mathbf{Sets}|A, B}^{\otimes, -1}} A \otimes_{\mathbf{Sets}} B
 \end{array} & & \begin{array}{c}
 \text{pt} \times \text{pt} \xrightarrow{\text{id}_{\text{pt}, \text{pt}}^{\otimes, -1}} \text{pt} \otimes_{\mathbf{Sets}} \text{pt} \\
 \downarrow \sigma_{\text{pt}, \text{pt}}^{\mathbf{Sets}, -1} \quad \searrow [b] \otimes_{\mathbf{Sets}} [a] \quad \swarrow [b] \times [a] \\
 B \otimes_{\mathbf{Sets}} A \xrightarrow{\text{id}_{\mathbf{Sets}|B, A}^{\otimes, -1}} B \times A \\
 \downarrow \sigma'_{A, B}{}^{-1} \quad \searrow [a] \times [b] \quad \swarrow [a] \otimes_{\mathbf{Sets}} [b] \\
 A \otimes_{\mathbf{Sets}} B \xrightarrow{\text{id}_{\mathbf{Sets}|A, B}^{\otimes, -1}} A \times B
 \end{array}
 \end{array}$$

Since:

- Subdiagram (2) commutes by the naturality of $\sigma^{\mathbf{Sets}, -1}$.
- Subdiagram (5) commutes by the naturality of $\text{id}^{\otimes, -1}$.

- Subdiagram (\dagger) commutes, as proved above.
- Subdiagram (4) commutes by the naturality of σ'^{-1} .
- Subdiagram (1) commutes by the naturality of $\text{id}^{\otimes, -1}$.

it follows that the diagram

$$\begin{array}{ccc}
 \text{pt} \times \text{pt} & \xrightarrow{[b] \times [a]} & B \times A \\
 & \searrow & \downarrow \sigma_{A,B}^{\mathbf{Sets}} \\
 & & A \times B \\
 & & \downarrow \text{id}_{\mathbf{Sets}|A,B}^{\otimes} \\
 & & A \otimes_{\mathbf{Sets}} B
 \end{array}
 \quad
 \begin{array}{ccc}
 B \times A & \xrightarrow{\text{id}_{\mathbf{Sets}|B,A}^{\otimes}} & B \otimes_{\mathbf{Sets}} A \\
 \downarrow \sigma_{A,B}^{\mathbf{Sets}} & & \downarrow \sigma'_{A,B} \\
 A \times B & \xrightarrow{\text{id}_{\mathbf{Sets}|A,B}^{\otimes}} & A \otimes_{\mathbf{Sets}} B
 \end{array}$$

commutes. We then have

$$\begin{aligned}
 [\text{id}_{\mathbf{Sets}|A,B}^{\otimes, -1} \circ \sigma_{A,B}^{\mathbf{Sets}, -1}](b, a) &= [\text{id}_{\mathbf{Sets}|A,B}^{\otimes, -1} \circ \sigma_{A,B}^{\mathbf{Sets}, -1} \circ ([b] \times [a])](\star, \star) \\
 &= [\sigma'_{A,B} \circ \text{id}_{\mathbf{Sets}|B,A}^{\otimes, -1} \circ ([b] \times [a])](\star, \star) \\
 &= [\sigma'_{A,B} \circ \text{id}_{\mathbf{Sets}|B,A}^{\otimes, -1}](b, a)
 \end{aligned}$$

for each $(b, a) \in B \times A$, and thus we have

$$\text{id}_{\mathbf{Sets}|A,B}^{\otimes, -1} \circ \sigma_{A,B}^{\mathbf{Sets}, -1} = \sigma'_{A,B} \circ \text{id}_{\mathbf{Sets}|B,A}^{\otimes, -1}.$$

Taking inverses then gives

$$\sigma_{A,B}^{\mathbf{Sets}} \circ \text{id}_{\mathbf{Sets}|A,B}^{\otimes} = \text{id}_{\mathbf{Sets}|B,A}^{\otimes} \circ \sigma'_{A,B},$$

showing that the diagram

$$\begin{array}{ccc}
 A \otimes_{\mathbf{Sets}} B & \xrightarrow{\text{id}_{\mathbf{Sets}|A,B}^{\otimes}} & A \times B \\
 \downarrow \sigma'_{A,B} & & \downarrow \sigma_{A,B}^{\mathbf{Sets}} \\
 B \otimes_{\mathbf{Sets}} A & \xrightarrow{\text{id}_{\mathbf{Sets}|B,A}^{\otimes}} & B \times A
 \end{array}$$

indeed commutes.

Uniqueness of the Isomorphism $\otimes_{\mathbf{Sets}} \cong \times$

Let $\phi, \psi: -_1 \otimes_{\mathbf{Sets}} -_2 \Rightarrow -_1 \times -_2$ be natural isomorphisms. Since these isomorphisms are compatible with the unitors of \mathbf{Sets} with respect to \times and \otimes (as shown above), we have

$$\begin{aligned}\lambda'_B &= \lambda_B^{\mathbf{Sets}} \circ \phi_{\text{pt}, B} \circ (\text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes} \otimes_{\mathbf{Sets}} \text{id}_Y), \\ \lambda'_B &= \lambda_B^{\mathbf{Sets}} \circ \psi_{\text{pt}, B} \circ (\text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes} \otimes_{\mathbf{Sets}} \text{id}_Y).\end{aligned}$$

Postcomposing both sides with $\lambda_B^{\mathbf{Sets}, -1}$ gives

$$\begin{aligned}\lambda_B^{\mathbf{Sets}, -1} \circ \lambda'_B \circ (\text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes, -1} \otimes_{\mathbf{Sets}} \text{id}_Y) &= \phi_{\text{pt}, B}, \\ \lambda_B^{\mathbf{Sets}, -1} \circ \lambda'_B \circ (\text{id}_{\mathbb{1}|\mathbf{Sets}}^{\otimes} \otimes_{\mathbf{Sets}} \text{id}_Y) &= \psi_{\text{pt}, B},\end{aligned}$$

and thus we have

$$\phi_{\text{pt}, B} = \psi_{\text{pt}, B}$$

for each $B \in \text{Obj}(\mathbf{Sets})$. Now, let $a \in A$ and consider the naturality diagrams

$$\begin{array}{ccc} \text{pt} \times B & \xrightarrow{[a] \times \text{id}_B} & A \times B \\ \phi_{\text{pt}, B} \downarrow & & \downarrow \phi_{A, B} \\ \text{pt} \otimes_{\mathbf{Sets}} B & \xrightarrow{[a] \otimes_{\mathbf{Sets}} \text{id}_B} & A \otimes_{\mathbf{Sets}} B \end{array} \quad \begin{array}{ccc} \text{pt} \times B & \xrightarrow{[a] \times \text{id}_B} & A \times B \\ \psi_{\text{pt}, B} \downarrow & & \downarrow \psi_{A, B} \\ \text{pt} \otimes_{\mathbf{Sets}} B & \xrightarrow{[a] \otimes_{\mathbf{Sets}} \text{id}_B} & A \otimes_{\mathbf{Sets}} B \end{array}$$

for ϕ and ψ with respect to the morphisms $[a]$ and id_B . Having shown that $\phi_{\text{pt}, B} = \psi_{\text{pt}, B}$, we have

$$\begin{aligned}\phi_{A, B}(a, b) &= [\phi_{A, B} \circ ([a] \times \text{id}_B)](\star, b) \\ &= [[a] \otimes_{\mathbf{Sets}} \text{id}_B] \circ \phi_{\text{pt}, B}(\star, b) \\ &= [[a] \otimes_{\mathbf{Sets}} \text{id}_B] \circ \psi_{\text{pt}, B}(\star, b) \\ &= [\psi_{A, B} \circ ([a] \times \text{id}_B)](\star, b) \\ &= \psi_{A, B}(a, b)\end{aligned}$$

for each $(a, b) \in A \times B$. Therefore we have

$$\phi_{A,B} = \psi_{A,B}$$

for each $A, B \in \text{Obj}(\mathbf{Sets})$ and thus $\phi = \psi$, showing the isomorphism $\otimes_{\mathbf{Sets}} \cong \times$ to be unique. 

COROLLARY 5.1.10.1.3 ► A SECOND UNIVERSAL PROPERTY FOR $(\mathbf{Sets}, \times, \text{pt})$

The symmetric monoidal structure on the category \mathbf{Sets} of **Proposition 5.1.9.1.1** is uniquely determined by the following requirements:

1. *Two-Sided Preservation of Colimits.* The tensor product

$$\otimes_{\mathbf{Sets}} : \mathbf{Sets} \times \mathbf{Sets} \rightarrow \mathbf{Sets}$$

of \mathbf{Sets} preserves colimits separately in each variable.

2. *The Unit Object Is pt.* We have $\mathbb{1}_{\mathbf{Sets}} \cong \text{pt}$.

More precisely, the full subcategory of the category $\mathcal{M}_{\mathbb{E}_{\infty}}(\mathbf{Sets})$ of ?? spanned by the symmetric monoidal categories $(\mathbf{Sets}, \otimes_{\mathbf{Sets}}, \mathbb{1}_{\mathbf{Sets}}, \lambda^{\mathbf{Sets}}, \rho^{\mathbf{Sets}}, \sigma^{\mathbf{Sets}})$ satisfying **Items 1** and **2** is contractible.

PROOF 5.1.10.1.4 ► PROOF OF COROLLARY 5.1.10.1.3

Since \mathbf{Sets} is locally presentable (??), it follows from ?? that **Item 1** is equivalent to the existence of an internal Hom as in **Item 1** of **Theorem 5.1.10.1.1**. The result then follows from **Theorem 5.1.10.1.1**. 

5.2 The Monoidal Category of Sets and Coproducts

5.2.1 Coproducts of Sets

See **Constructions With Sets, Section 4.2.3**.

5.2.2 The Monoidal Unit

DEFINITION 5.2.2.1.1 ► THE MONOIDAL UNIT OF \mathbb{I}

The **monoidal unit of the coproduct of sets** is the functor

$$\mathbb{0}^{\text{Sets}}: \text{pt} \rightarrow \text{Sets}$$

defined by

$$\mathbb{0}_{\text{Sets}} \stackrel{\text{def}}{=} \emptyset,$$

where \emptyset is the empty set of [Constructions With Sets, Definition 4.3.1.1.1](#).

5.2.3 The Associator

DEFINITION 5.2.3.1.1 ► THE ASSOCIATOR OF \amalg

The **associator of the coproduct of sets** is the natural isomorphism

$$\alpha^{\text{Sets}, \amalg}: \amalg \circ (\amalg \times \text{id}_{\text{Sets}}) \xrightarrow{\sim} \amalg \circ (\text{id}_{\text{Sets}} \times \amalg) \circ \alpha_{\text{Sets}, \text{Sets}, \text{Sets}}^{\text{Cats}},$$

as in the diagram

$$\begin{array}{ccc}
 & \text{Sets} \times (\text{Sets} \times \text{Sets}) & \\
 \alpha_{\text{Sets}, \text{Sets}, \text{Sets}}^{\text{Cats}} \nearrow & & \searrow \text{id} \times \amalg \\
 (\text{Sets} \times \text{Sets}) \times \text{Sets} & & \text{Sets} \times \text{Sets} \\
 \amalg \times \text{id} \searrow & \alpha^{\text{Sets}, \amalg} \nearrow & \searrow \amalg \\
 \text{Sets} \times \text{Sets} & \xrightarrow{\amalg} & \text{Sets},
 \end{array}$$

whose component

$$\alpha_{X,Y,Z}^{\text{Sets}, \amalg}: (X \amalg Y) \amalg Z \xrightarrow{\sim} X \amalg (Y \amalg Z)$$

at (X, Y, Z) is given by

$$\alpha_{X,Y,Z}^{\text{Sets}, \amalg}(a) \stackrel{\text{def}}{=} \begin{cases} (0, x) & \text{if } a = (0, (0, x)), \\ (1, (0, y)) & \text{if } a = (0, (1, y)), \\ (1, (1, a)) & \text{if } a = (1, z) \end{cases}$$

for each $a \in (X \amalg Y) \amalg Z$.

PROOF 5.2.3.1.2 ► PROOF OF THE CLAIMS MADE IN DEFINITION 5.2.3.1.1

Unwinding the Definitions of $(X \amalg Y) \amalg Z$ and $X \amalg (Y \amalg Z)$

Firstly, we unwind the expressions for $(X \amalg Y) \amalg Z$ and $X \amalg (Y \amalg Z)$. We have

$$\begin{aligned}
 (X \amalg Y) \amalg Z &\stackrel{\text{def}}{=} \{(0, a) \in S \mid a \in X \amalg Y\} \cup \{(1, z) \in S \mid z \in Z\} \\
 &= \{(0, (0, x)) \in S \mid x \in X\} \cup \{(0, (1, y)) \in S \mid y \in Y\} \\
 &\quad \cup \{(1, z) \in S \mid z \in Z\},
 \end{aligned}$$

where $S = \{0, 1\} \times ((X \amalg Y) \cup Z)$ and

$$\begin{aligned} X \amalg (Y \amalg Z) &\stackrel{\text{def}}{=} \{(0, x) \in S' \mid x \in X\} \cup \{(1, a) \in S' \mid a \in Y \amalg Z\} \\ &= \{(0, x) \in S' \mid x \in X\} \cup \{(1, (0, y)) \in S' \mid y \in Y\} \\ &\quad \cup \{(1, (1, z)) \in S' \mid z \in Z\}, \end{aligned}$$

where $S' = \{0, 1\} \times (X \cup (Y \amalg Z))$.

Invertibility

The inverse of $\alpha_{X,Y,Z}^{\text{Sets}, \amalg}$ is the map

$$\alpha_{X,Y,Z}^{\text{Sets}, \amalg, -1}: X \amalg (Y \amalg Z) \rightarrow (X \amalg Y) \amalg Z$$

given by

$$\alpha_{X,Y,Z}^{\text{Sets}, \amalg, -1}(a) \stackrel{\text{def}}{=} \begin{cases} (0, (0, x)) & \text{if } a = (0, x), \\ (0, (1, y)) & \text{if } a = (1, (0, y)), \\ (1, z) & \text{if } a = (1, (1, z)) \end{cases}$$

for each $a \in X \amalg (Y \amalg Z)$. Indeed:

- *Invertibility I.* The map $\alpha_{X,Y,Z}^{\text{Sets}, \amalg, -1} \circ \alpha_{X,Y,Z}^{\text{Sets}, \amalg}$ acts on elements as

$$\begin{aligned} (0, (0, x)) &\mapsto (0, x) \mapsto (0, (0, x)), \\ (0, (0, y)) &\mapsto (1, (0, y)) \mapsto (0, (0, y)), \\ (1, z) &\mapsto (1, (1, z)) \mapsto (1, z) \end{aligned}$$

and hence is equal to the identity map of $(X \amalg Y) \amalg Z$.

- *Invertibility II.* The map $\alpha_{X,Y,Z}^{\text{Sets}, \amalg} \circ \alpha_{X,Y,Z}^{\text{Sets}, \amalg, -1}$ acts on elements as

$$\begin{aligned} (0, x) &\mapsto (0, (0, x)) \mapsto (0, x), \\ (1, (0, y)) &\mapsto (0, (0, y)) \mapsto (1, (0, y)), \\ (1, (1, z)) &\mapsto (1, z) \mapsto (1, (1, z)) \end{aligned}$$

and hence is equal to the identity map of $X \amalg (Y \amalg Z)$.

Therefore $\alpha_{X,Y,Z}^{\text{Sets}, \amalg}$ is indeed an isomorphism.

Naturality

We need to show that, given functions

$$f: X \rightarrow X',$$

$$g: Y \rightarrow Y',$$

$$h: Z \rightarrow Z'$$

the diagram

$$\begin{array}{ccc} (X \amalg Y) \amalg Z & \xrightarrow{(f \amalg g) \amalg h} & (X' \amalg Y') \amalg Z' \\ \downarrow \alpha_{X,Y,Z}^{\text{Sets}, \amalg} & & \downarrow \alpha_{X',Y',Z'}^{\text{Sets}, \amalg} \\ X \amalg (Y \amalg Z) & \xrightarrow{f \amalg (g \amalg h)} & X' \amalg (Y' \amalg Z') \end{array}$$

commutes. Indeed, this diagram acts on elements as

$$\begin{array}{ccc} (0, (0, x)) & \mapsto & (0, (0, f(x))) \\ \downarrow & & \downarrow \\ (0, x) & \mapsto & (0, f(x)) \\ (0, (1, y)) & \mapsto & (0, (1, g(y))) \\ \downarrow & & \downarrow \\ (1, (0, y)) & \mapsto & (1, (0, g(y))) \\ (1, z) & \mapsto & (1, h(z)) \\ \downarrow & & \downarrow \\ (1, (1, z)) & \mapsto & (1, (1, h(z))) \end{array}$$

and hence indeed commutes, showing $\alpha^{\mathbf{Sets}, \amalg}$ to be a natural transformation.

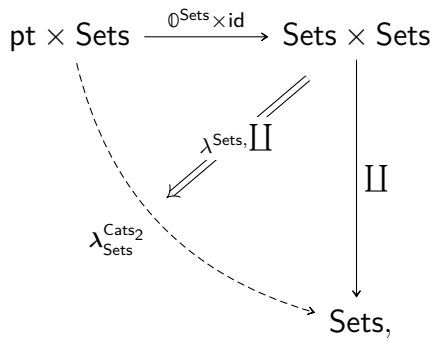

Being a Natural Isomorphism

Since $\alpha^{\mathbf{Sets}, \amalg}$ is natural and $\alpha^{\mathbf{Sets}, \amalg, -1}$ is a componentwise inverse to $\alpha^{\mathbf{Sets}, \amalg}$, it follows from [Categories, Item 2 of Proposition 11.9.7.1.2](#) that $\lambda^{\mathbf{Sets}, -1}$ is also natural. Thus $\alpha^{\mathbf{Sets}, \amalg}$ is a natural isomorphism. 

5.2.4 The Left Unitor

DEFINITION 5.2.4.1.1 ► THE LEFT UNITOR OF \amalg

The **left unitor of the coproduct of sets** is the natural isomorphism

$$\lambda^{\mathbf{Sets}, \amalg}: \amalg \circ (\emptyset^{\mathbf{Sets}} \times \text{id}_{\mathbf{Sets}}) \xrightarrow{\sim} \lambda_{\mathbf{Sets}}^{\mathbf{Cats}_2}$$

whose component

$$\lambda_X^{\mathbf{Sets}, \amalg}: \emptyset \amalg X \xrightarrow{\sim} X$$

at X is given by

$$\lambda_X^{\mathbf{Sets}, \amalg}((1, x)) \stackrel{\text{def}}{=} x$$

for each $(1, x) \in \emptyset \amalg X$.

PROOF 5.2.4.1.2 ► PROOF OF THE CLAIMS MADE IN DEFINITION 5.2.4.1.1

Unwinding the Definition of $\emptyset \amalg X$

Firstly, we unwind the expressions for $\emptyset \amalg X$. We have

$$\begin{aligned}\emptyset \amalg X &\stackrel{\text{def}}{=} \{(0, z) \in S \mid z \in \emptyset\} \cup \{(1, x) \in S \mid x \in X\} \\ &= \emptyset \cup \{(1, x) \in S \mid x \in X\} \\ &= \{(1, x) \in S \mid x \in X\},\end{aligned}$$

where $S = \{0, 1\} \times (\emptyset \cup X)$.

Invertibility

The inverse of $\lambda_X^{\text{Sets}, \amalg}$ is the map

$$\lambda_X^{\text{Sets}, \amalg, -1}: X \rightarrow \emptyset \amalg X$$

given by

$$\lambda_X^{\text{Sets}, \amalg, -1}(x) \stackrel{\text{def}}{=} (1, x)$$

for each $x \in X$. Indeed:

- *Invertibility I.* We have

$$\begin{aligned}\left[\lambda_X^{\text{Sets}, \amalg, -1} \circ \lambda_X^{\text{Sets}, \amalg}\right](1, x) &= \lambda_X^{\text{Sets}, \amalg, -1}\left(\lambda_X^{\text{Sets}, \amalg}(1, x)\right) \\ &= \lambda_X^{\text{Sets}, \amalg, -1}(x) \\ &= (1, x) \\ &= [\text{id}_{\emptyset \amalg X}](1, x)\end{aligned}$$

for each $(1, x) \in \emptyset \amalg X$, and therefore we have

$$\lambda_X^{\text{Sets}, \amalg, -1} \circ \lambda_X^{\text{Sets}, \amalg} = \text{id}_{\emptyset \amalg X}.$$

- *Invertibility II.* We have

$$\begin{aligned}\left[\lambda_X^{\text{Sets}, \amalg} \circ \lambda_X^{\text{Sets}, \amalg, -1}\right](x) &= \lambda_X^{\text{Sets}, \amalg}\left(\lambda_X^{\text{Sets}, \amalg, -1}(x)\right) \\ &= \lambda_X^{\text{Sets}, \amalg, -1}(1, x) \\ &= x\end{aligned}$$

$$= [\text{id}_X](x)$$

for each $x \in X$, and therefore we have

$$\lambda_X^{\text{Sets}, \amalg} \circ \lambda_X^{\text{Sets}, \amalg, -1} = \text{id}_X.$$

Therefore $\lambda_X^{\text{Sets}, \amalg}$ is indeed an isomorphism.

Naturality

We need to show that, given a function $f: X \rightarrow Y$, the diagram

$$\begin{array}{ccc} \emptyset \amalg X & \xrightarrow{\text{id}_{\emptyset} \amalg f} & \emptyset \amalg Y \\ \lambda_X^{\text{Sets}, \amalg} \downarrow & & \downarrow \lambda_Y^{\text{Sets}, \amalg} \\ X & \xrightarrow{f} & Y \end{array}$$

commutes. Indeed, this diagram acts on elements as

$$\begin{array}{ccc} (1, x) & \longmapsto & (1, f(x)) \\ \downarrow & & \downarrow \\ x & \longmapsto & f(x) \end{array}$$

and hence indeed commutes. Therefore $\lambda^{\text{Sets}, \amalg}$ is a natural transformation.

Being a Natural Isomorphism

Since $\lambda^{\text{Sets}, \amalg}$ is natural and $\lambda^{\text{Sets}, -1}$ is a componentwise inverse to $\lambda^{\text{Sets}, \amalg}$, it follows from [Categories, Item 2](#) of [Proposition 11.9.7.1.2](#) that $\lambda^{\text{Sets}, -1}$ is also natural. Thus $\lambda^{\text{Sets}, \amalg}$ is a natural isomorphism. 

5.2.5 The Right Unitor

DEFINITION 5.2.5.1.1 ► THE RIGHT UNITOR OF \amalg

The **right unitor of the coproduct of sets** is the natural isomorphism

$$\rho^{\text{Sets}, \amalg} : \amalg \circ (\text{id} \times \mathbb{0}^{\text{Sets}}) \xrightarrow{\sim} \rho_{\text{Sets}}^{\text{Cats}_2},$$

whose component

$$\rho_X^{\text{Sets}, \amalg} : X \amalg \emptyset \xrightarrow{\sim} X$$

at X is given by

$$\rho_X^{\text{Sets}, \amalg}((0, x)) \stackrel{\text{def}}{=} x$$

for each $(0, x) \in X \amalg \emptyset$.

PROOF 5.2.5.1.2 ► PROOF OF THE CLAIMS MADE IN DEFINITION 5.2.5.1.1

Unwinding the Definition of $X \amalg \emptyset$

Firstly, we unwind the expression for $X \amalg \emptyset$. We have

$$\begin{aligned} X \amalg \emptyset &\stackrel{\text{def}}{=} \{(0, x) \in S \mid x \in X\} \cup \{(1, z) \in S \mid z \in \emptyset\} \\ &= \{(0, x) \in S \mid x \in X\} \cup \emptyset \\ &= \{(0, x) \in S \mid x \in X\}, \end{aligned}$$

where $S = \{0, 1\} \times (X \cup \emptyset) = \{0, 1\} \times (\emptyset \cup X) = S$.

Invertibility

The inverse of $\rho_X^{\text{Sets}, \amalg}$ is the map

$$\rho_X^{\text{Sets}, \amalg, -1} : X \rightarrow X \amalg \emptyset$$

given by

$$\rho_X^{\mathbf{Sets}, \amalg, -1}(x) \stackrel{\text{def}}{=} (0, x)$$

for each $x \in X$. Indeed:

- *Invertibility I.* We have

$$\begin{aligned} \left[\rho_X^{\mathbf{Sets}, \amalg, -1} \circ \rho_X^{\mathbf{Sets}, \amalg} \right] (0, x) &= \rho_X^{\mathbf{Sets}, \amalg, -1} \left(\rho_X^{\mathbf{Sets}, \amalg} (0, x) \right) \\ &= \rho_X^{\mathbf{Sets}, \amalg, -1}(x) \\ &= (0, x) \\ &= [\text{id}_{X \amalg \emptyset}] (0, x) \end{aligned}$$

for each $(0, x) \in \emptyset \amalg X$, and therefore we have

$$\rho_X^{\mathbf{Sets}, \amalg, -1} \circ \rho_X^{\mathbf{Sets}, \amalg} = \text{id}_{\emptyset \amalg X}.$$

- *Invertibility II.* We have

$$\begin{aligned} \left[\rho_X^{\mathbf{Sets}, \amalg} \circ \rho_X^{\mathbf{Sets}, \amalg, -1} \right] (x) &= \rho_X^{\mathbf{Sets}, \amalg} \left(\rho_X^{\mathbf{Sets}, \amalg, -1}(x) \right) \\ &= \rho_X^{\mathbf{Sets}, \amalg, -1}(0, x) \\ &= x \\ &= [\text{id}_X](x) \end{aligned}$$

for each $x \in X$, and therefore we have

$$\rho_X^{\mathbf{Sets}, \amalg} \circ \rho_X^{\mathbf{Sets}, \amalg, -1} = \text{id}_X.$$

Therefore $\rho_X^{\mathbf{Sets}, \amalg}$ is indeed an isomorphism.

Naturality

We need to show that, given a function $f: X \rightarrow Y$, the diagram

$$\begin{array}{ccc} X \amalg \emptyset & \xrightarrow{f \amalg \text{id}_{\emptyset}} & Y \amalg \emptyset \\ \rho_X^{\mathbf{Sets}, \amalg} \downarrow & & \downarrow \rho_Y^{\mathbf{Sets}, \amalg} \\ X & \xrightarrow{f} & Y \end{array}$$

commutes. Indeed, this diagram acts on elements as

$$\begin{array}{ccc}
 (0, x) & & (0, x) \mapsto (1, f(x)) \\
 \downarrow & & \downarrow \\
 x & \xrightarrow{\quad} & f(x)
 \end{array}$$

and hence indeed commutes. Therefore $\rho^{\mathbf{Sets}, \amalg}$ is a natural transformation.

Being a Natural Isomorphism

Since $\rho^{\mathbf{Sets}, \amalg}$ is natural and $\rho^{\mathbf{Sets}, -1}$ is a componentwise inverse to $\rho^{\mathbf{Sets}, \amalg}$, it follows from [Categories, Item 2](#) of [Proposition 11.9.7.1.2](#) that $\rho^{\mathbf{Sets}, -1}$ is also natural. Thus $\rho^{\mathbf{Sets}, \amalg}$ is a natural isomorphism. 

5.2.6 The Symmetry

DEFINITION 5.2.6.1.1 ► THE SYMMETRY OF \amalg

The **symmetry of the coproduct of sets** is the natural isomorphism

$$\sigma^{\mathbf{Sets}, \amalg}: \amalg \xrightarrow{\sim} \amalg \circ \sigma_{\mathbf{Sets}, \mathbf{Sets}}^{\mathbf{Cats}_2}, \quad \begin{array}{ccc} \mathbf{Sets} \times \mathbf{Sets} & \xrightarrow{\amalg} & \mathbf{Sets} \\ \sigma_{\mathbf{Sets}, \mathbf{Sets}}^{\mathbf{Cats}_2} \searrow & \downarrow \sigma^{\mathbf{Sets}, \amalg} & \nearrow \amalg \\ & \mathbf{Sets} \times \mathbf{Sets} & \end{array}$$

whose component

$$\sigma_{X,Y}^{\mathbf{Sets}, \amalg}: X \amalg Y \xrightarrow{\sim} Y \amalg X$$

at $X, Y \in \mathbf{Obj}(\mathbf{Sets})$ is defined by

$$\sigma_{X,Y}^{\mathbf{Sets}, \amalg}(x, y) \stackrel{\text{def}}{=} (y, x)$$

for each $(x, y) \in X \times Y$.

PROOF 5.2.6.1.2 ► PROOF OF THE CLAIMS MADE IN DEFINITION 5.2.6.1.1**Unwinding the Definitions of $X \amalg Y$ and $Y \amalg X$**

Firstly, we unwind the expressions for $X \amalg Y$ and $Y \amalg X$. We have

$$X \amalg Y \stackrel{\text{def}}{=} \{(0, x) \in S \mid x \in X\} \cup \{(1, y) \in S \mid y \in Y\},$$

where $S = \{0, 1\} \times (X \cup Y)$ and

$$Y \amalg X \stackrel{\text{def}}{=} \{(0, y) \in S' \mid y \in Y\} \cup \{(1, x) \in S' \mid x \in X\},$$

where $S' = \{0, 1\} \times (Y \cup X) = \{0, 1\} \times (X \cup Y) = S$.

Invertibility

The inverse of $\sigma_{X,Y}^{\text{Sets}, \amalg}$ is the map

$$\sigma_{X,Y}^{\text{Sets}, \amalg, -1}: Y \amalg X \rightarrow X \amalg Y$$

defined by

$$\sigma_{X,Y}^{\text{Sets}, \amalg, -1} \stackrel{\text{def}}{=} \sigma_{Y,X}^{\text{Sets}, \amalg}$$

and hence given by

$$\sigma_{X,Y}^{\text{Sets}, \amalg, -1}(z) \stackrel{\text{def}}{=} \begin{cases} (0, x) & \text{if } z = (1, x), \\ (1, y) & \text{if } z = (0, y) \end{cases}$$

for each $z \in Y \amalg X$. Indeed:

- *Invertibility I.* We have

$$\begin{aligned} \left[\sigma_{X,Y}^{\text{Sets}, \amalg, -1} \circ \sigma_{X,Y}^{\text{Sets}, \amalg} \right](0, x) &= \sigma_X^{\text{Sets}, \amalg, -1} \left(\sigma_X^{\text{Sets}, \amalg}(0, x) \right) \\ &= \sigma_X^{\text{Sets}, \amalg, -1}(1, x) \\ &= (0, x) \\ &= [\text{id}_{X \amalg Y}](0, x) \end{aligned}$$

for each $(0, x) \in X \amalg Y$ and

$$\left[\sigma_{X,Y}^{\text{Sets}, \amalg, -1} \circ \sigma_{X,Y}^{\text{Sets}, \amalg} \right](1, y) = \sigma_X^{\text{Sets}, \amalg, -1} \left(\sigma_X^{\text{Sets}, \amalg}(1, y) \right)$$

$$\begin{aligned}
&= \sigma_X^{\mathbf{Sets}, \amalg, -1}(0, y) \\
&= (1, y) \\
&= [\mathrm{id}_X \amalg_Y](1, y)
\end{aligned}$$

for each $(1, y) \in X \amalg Y$, and therefore we have

$$\sigma_{X,Y}^{\mathbf{Sets}, \amalg, -1} \circ \sigma_{X,Y}^{\mathbf{Sets}, \amalg} = \mathrm{id}_{X \amalg Y}.$$

- *Invertibility II.* We have

$$\begin{aligned}
\left[\sigma_{X,Y}^{\mathbf{Sets}, \amalg} \circ \sigma_{X,Y}^{\mathbf{Sets}, \amalg, -1} \right](0, y) &= \sigma_X^{\mathbf{Sets}, \amalg} \left(\sigma_X^{\mathbf{Sets}, \amalg, -1}(0, y) \right) \\
&= \sigma_X^{\mathbf{Sets}, \amalg, -1}(1, y) \\
&= (0, y) \\
&= [\mathrm{id}_Y \amalg_X](0, y)
\end{aligned}$$

for each $(0, y) \in Y \amalg X$ and

$$\begin{aligned}
\left[\sigma_{X,Y}^{\mathbf{Sets}, \amalg} \circ \sigma_{X,Y}^{\mathbf{Sets}, \amalg, -1} \right](1, x) &= \sigma_X^{\mathbf{Sets}, \amalg} \left(\sigma_X^{\mathbf{Sets}, \amalg, -1}(1, x) \right) \\
&= \sigma_X^{\mathbf{Sets}, \amalg, -1}(0, x) \\
&= (1, x) \\
&= [\mathrm{id}_Y \amalg_X](1, x)
\end{aligned}$$

for each $(1, x) \in Y \amalg X$, and therefore we have

$$\sigma_X^{\mathbf{Sets}, \amalg} \circ \sigma_X^{\mathbf{Sets}, \amalg, -1} = \mathrm{id}_{Y \amalg X}.$$

Therefore $\sigma_{X,Y}^{\mathbf{Sets}, \amalg}$ is indeed an isomorphism.

Naturality

We need to show that, given functions $f: A \rightarrow X$ and $g: B \rightarrow Y$, the

diagram

$$\begin{array}{ccc}
 A \amalg B & \xrightarrow{f \amalg g} & X \amalg Y \\
 \downarrow \sigma_{A,B}^{\mathbf{Sets}, \amalg} & & \downarrow \sigma_{X,Y}^{\mathbf{Sets}, \amalg} \\
 B \amalg A & \xrightarrow{g \amalg f} & Y \amalg X
 \end{array}$$

commutes. Indeed, this diagram acts on elements as

$$\begin{array}{ccc}
 (0, a) & \xrightarrow{\quad} & (0, f(a)) \\
 \downarrow & & \downarrow \\
 (1, a) & \xrightarrow{\quad} & (1, f(a)) \\
 \\
 (1, b) & \xrightarrow{\quad} & (1, g(b)) \\
 \downarrow & & \downarrow \\
 (0, b) & \xrightarrow{\quad} & (0, g(b))
 \end{array}$$

and hence indeed commutes. Therefore $\sigma^{\mathbf{Sets}, \amalg}$ is a natural transformation.

Being a Natural Isomorphism

Since $\sigma^{\mathbf{Sets}, \amalg}$ is natural and $\sigma^{\mathbf{Sets}, -1}$ is a componentwise inverse to $\sigma^{\mathbf{Sets}, \amalg}$, it follows from [Categories, Item 2](#) of [Proposition 11.9.7.1.2](#) that $\sigma^{\mathbf{Sets}, -1}$ is also natural. Thus $\sigma^{\mathbf{Sets}, \amalg}$ is a natural isomorphism. 

5.2.7 The Monoidal Category of Sets and Coproducts

PROPOSITION 5.2.7.1.1 ► THE MONOIDAL STRUCTURE ON SETS ASSOCIATED TO \amalg

The category **Sets** admits a closed symmetric monoidal category structure consisting of:

- *The Underlying Category.* The category **Sets** of pointed sets.

- *The Monoidal Product.* The coproduct functor

$$\amalg: \mathbf{Sets} \times \mathbf{Sets} \rightarrow \mathbf{Sets}$$

of [Constructions With Sets, Item 1](#) of [Proposition 4.2.3.1.4](#).

- *The Monoidal Unit.* The functor

$$\mathbb{0}^{\mathbf{Sets}}: \mathbf{pt} \rightarrow \mathbf{Sets}$$

of [Definition 5.2.2.1.1](#).

- *The Associators.* The natural isomorphism

$$\alpha^{\mathbf{Sets}, \amalg}: \amalg \circ (\amalg \times \mathrm{id}_{\mathbf{Sets}}) \xrightarrow{\sim} \amalg \circ (\mathrm{id}_{\mathbf{Sets}} \times \amalg) \circ \alpha_{\mathbf{Sets}, \mathbf{Sets}, \mathbf{Sets}}^{\mathbf{Cats}}$$

of [Definition 5.2.3.1.1](#).

- *The Left Unitors.* The natural isomorphism

$$\lambda^{\mathbf{Sets}, \amalg}: \amalg \circ (\mathbb{0}^{\mathbf{Sets}} \times \mathrm{id}_{\mathbf{Sets}}) \xrightarrow{\sim} \lambda_{\mathbf{Sets}}^{\mathbf{Cats}_2}$$

of [Definition 5.2.4.1.1](#).

- *The Right Unitors.* The natural isomorphism

$$\rho^{\mathbf{Sets}, \amalg}: \amalg \circ (\mathrm{id} \times \mathbb{0}^{\mathbf{Sets}}) \xrightarrow{\sim} \rho_{\mathbf{Sets}}^{\mathbf{Cats}_2}$$

of [Definition 5.2.5.1.1](#).

- *The Symmetry.* The natural isomorphism

$$\sigma^{\mathbf{Sets}, \amalg}: \times \xrightarrow{\sim} \times \circ \sigma_{\mathbf{Sets}, \mathbf{Sets}}^{\mathbf{Cats}_2}$$

of [Definition 5.2.6.1.1](#).

PROOF 5.2.7.1.2 ► PROOF OF PROPOSITION 5.2.7.1.1

The Pentagon Identity

Let W , X , Y and Z be sets. We have to show that the diagram

$$\begin{array}{ccc}
 & (W \amalg (X \amalg Y)) \amalg Z & \\
 \alpha_{W,X,Y}^{\text{Sets}, \amalg} \amalg \text{id}_Z \nearrow & & \searrow \alpha_{W,X}^{\text{Sets}, \amalg} \amalg \amalg_{Y,Z} \\
 ((W \amalg X) \amalg Y) \amalg Z & & W \amalg ((X \amalg Y) \amalg Z) \\
 \alpha_W^{\text{Sets}, \amalg} \amalg \amalg_{X,Y,Z} \searrow & & \searrow \text{id}_W \amalg \alpha_{X,Y,Z}^{\text{Sets}, \amalg} \\
 (W \amalg X) \amalg (Y \amalg Z) & \xrightarrow{\alpha_{W,X,Y}^{\text{Sets}, \amalg} \amalg \amalg_Z} & W \amalg (X \amalg (Y \amalg Z))
 \end{array}$$

commutes. Indeed, this diagram acts on elements as

$$\begin{array}{ccccc}
 & & (0, (0, w)) & & \\
 & \swarrow & & \searrow & \\
 (0, (0, (0, w))) & & (0, (0, (0, w))) & & (0, w) \\
 \searrow & & & & \searrow \\
 (0, (0, w)) & \longmapsto & (0, w) & & (0, w)
 \end{array}$$

and therefore the pentagon identity is satisfied.

The Triangle Identity

Let X and Y be sets. We have to show that the diagram

$$\begin{array}{ccc}
 (X \amalg \emptyset) \amalg Y & \xrightarrow{\alpha_{X,\emptyset,Y}^{\text{Sets}, \amalg}} & X \amalg (\emptyset \amalg Y) \\
 \searrow \rho_X^{\text{Sets}, \amalg} \amalg \text{id}_Y & & \swarrow \text{id}_X \amalg \lambda_Y^{\text{Sets}, \amalg} \\
 & X \amalg Y &
 \end{array}$$

commutes. Indeed, this diagram acts on elements as

$$\begin{array}{ccccc}
 (0, (1, x)) & & (1, (0, x)) & \xrightarrow{\quad} & (0, x) \\
 \searrow & & \searrow & & \swarrow \\
 & (0, x) & & & (0, x) \\
 (1, y) & & (1, y) & \xrightarrow{\quad} & (1, (1, y)) \\
 \searrow & & \searrow & & \swarrow \\
 & (1, y) & & & (1, y)
 \end{array}$$

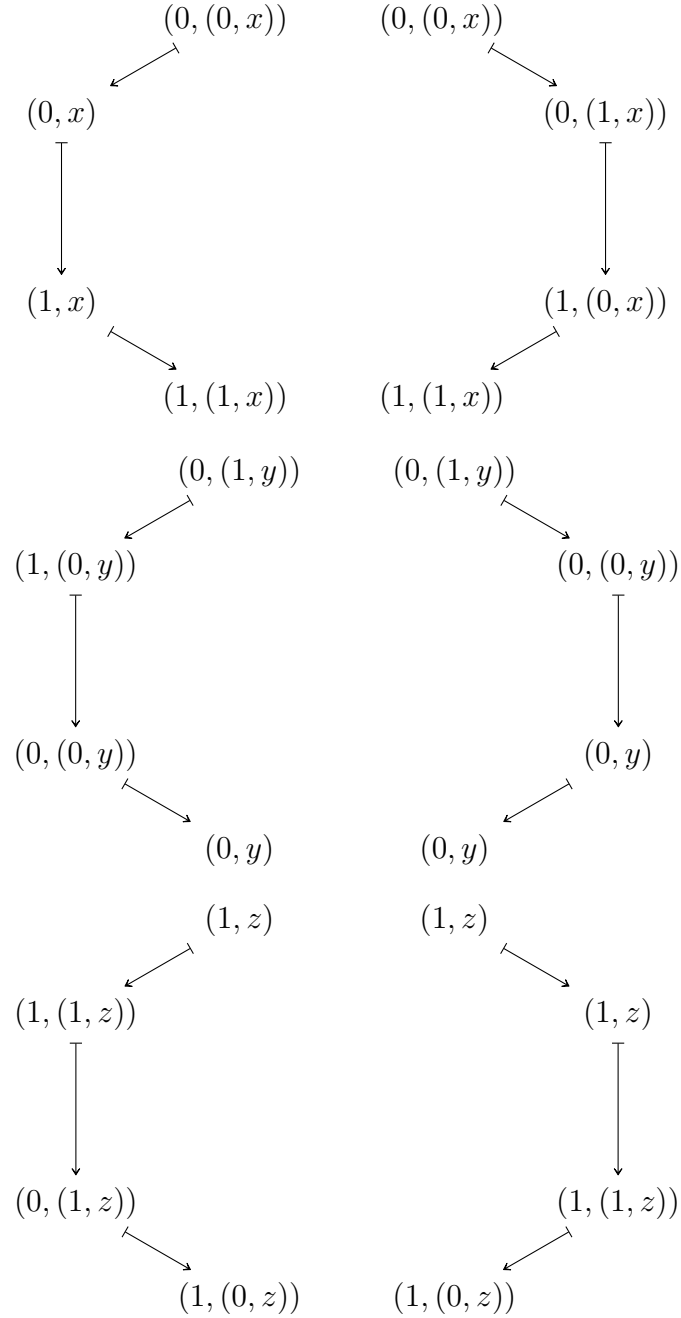

and therefore the triangle identity is satisfied.

The Left Hexagon Identity

Let X , Y , and Z be sets. We have to show that the diagram

$$\begin{array}{ccc}
 & (X \amalg Y) \amalg Z & \\
 \alpha_{X,Y,Z}^{\text{Sets}} \swarrow & & \searrow \sigma_{X,Y}^{\text{Sets}} \amalg \text{id}_Z \\
 X \amalg (Y \amalg Z) & & (Y \amalg X) \amalg Z \\
 \downarrow \sigma_{X,Y}^{\text{Sets}} \amalg \text{id}_Z & & \downarrow \alpha_{Y,X,Z}^{\text{Sets}} \\
 (Y \amalg Z) \amalg X & & Y \amalg (X \amalg Z) \\
 \alpha_{Y,Z,X}^{\text{Sets}} \swarrow & & \swarrow \text{id}_Y \amalg \sigma_{X,Z}^{\text{Sets}} \\
 & Y \amalg (Z \amalg X) &
 \end{array}$$

commutes. Indeed, this diagram acts on elements as

and thus the left hexagon identity is satisfied.

The Right Hexagon Identity

Let X , Y , and Z be sets. We have to show that the diagram

$$\begin{array}{ccc}
 & X \amalg (Y \amalg Z) & \\
 (\alpha_{X,Y,Z}^{\text{Sets}})^{-1} \swarrow & & \searrow \text{id}_X \amalg \sigma_{Y,Z}^{\text{Sets}} \\
 (X \amalg Y) \amalg Z & & X \amalg (Z \amalg Y) \\
 \downarrow \sigma_{X \amalg Y, Z}^{\text{Sets}} & & \downarrow (\alpha_{X,Z,Y}^{\text{Sets}})^{-1} \\
 Z \amalg (X \amalg Y) & & (X \amalg Z) \amalg Y \\
 \searrow (\alpha_{Z,X,Y}^{\text{Sets}})^{-1} & & \swarrow \sigma_{X,Z}^{\text{Sets}} \amalg \text{id}_Y \\
 & (Z \amalg X) \amalg Y &
 \end{array}$$

commutes. Indeed, this diagram acts on elements as

$$\begin{array}{ccc}
 & (0, x) & \\
 \swarrow & & \searrow \\
 (0, (0, x)) & & (0, x) \\
 \downarrow & & \downarrow \\
 (1, (0, x)) & & (0, (0, x)) \\
 \searrow & & \swarrow \\
 & (0, (1, x)) &
 \end{array}$$

5.3 The Bimonoidal Category of Sets, Products, and Coproducts

5.3.1 The Left Distributor

DEFINITION 5.3.1.1.1 ► THE LEFT DISTRIBUTOR OF \times OVER \amalg

The **left distributor of the product of sets over the coproduct of sets** is the natural isomorphism

$$\delta_\ell^{\text{Sets}}: \times \circ (\text{id}_{\text{Sets}} \times \amalg) \xrightarrow{\sim} \amalg \circ ((\times) \times (\times)) \circ \mu_{4|\text{Sets}, \text{Sets}, \text{Sets}, \text{Sets}}^{\text{Cats}_2} \circ (\Delta_{\text{Sets}} \times (\text{id}_{\text{Sets}} \times \text{id}_{\text{Sets}}))$$

as in the diagram

whose component

$$\delta_{\ell|X,Y,Z}^{\text{Sets}}: X \times (Y \amalg Z) \xrightarrow{\sim} (X \times Y) \amalg (X \times Z)$$

at (X, Y, Z) is defined by

$$\delta_{\ell|X,Y,Z}^{\text{Sets}}(x, a) \stackrel{\text{def}}{=} \begin{cases} (0, (x, y)) & \text{if } a = (0, y), \\ (1, (x, z)) & \text{if } a = (1, z) \end{cases}$$

for each $(x, a) \in X \times (Y \amalg Z)$.

PROOF 5.3.1.1.2 ► PROOF OF THE CLAIMS MADE IN DEFINITION 5.3.1.1.1

Invertibility

The inverse of $\delta_{\ell|X,Y,Z}^{\text{Sets}}$ is the map

$$\delta_{\ell|X,Y,Z}^{\text{Sets},-1}: (X \times Y) \amalg (X \times Z) \xrightarrow{\sim} X \times (Y \amalg Z)$$

given by

$$\delta_{\ell|X,Y,Z}^{\text{Sets},-1}(a) \stackrel{\text{def}}{=} \begin{cases} (x, (0, y)) & \text{if } a = (0, (x, y)), \\ (x, (1, z)) & \text{if } a = (1, (x, z)) \end{cases}$$

for $a \in (X \times Y) \amalg (X \times Z)$. Indeed:

- *Invertibility I.* The map $\delta_{\ell|X,Y,Z}^{\text{Sets},-1} \circ \delta_{\ell|X,Y,Z}^{\text{Sets}}$ acts on elements as

$$\begin{aligned} (x, (0, y)) &\mapsto (0, (x, y)) \mapsto (x, (0, y)), \\ (x, (1, z)) &\mapsto (1, (x, z)) \mapsto (x, (1, z)), \end{aligned}$$

but these are the two possible cases for elements of $X \times (Y \amalg Z)$. Hence the map is equal to the identity.

- *Invertibility II.* The map $\delta_{\ell|X,Y,Z}^{\text{Sets}} \circ \delta_{\ell|X,Y,Z}^{\text{Sets},-1}$ acts on elements as

$$\begin{aligned} (0, (x, y)) &\mapsto (x, (0, y)) \mapsto (0, (x, y)), \\ (1, (x, z)) &\mapsto (x, (1, z)) \mapsto (1, (x, z)), \end{aligned}$$

but these are the two possible cases for elements of $(X \times Y) \amalg (X \times Z)$. Hence the map is equal to the identity.

Thus $\delta_{\ell|X,Y,Z}^{\text{Sets}}$ is an isomorphism for all X, Y, Z .

Naturality

We need to show that, given functions

$$\begin{aligned} f: X &\rightarrow X', \\ g: Y &\rightarrow Y', \\ h: Z &\rightarrow Z' \end{aligned}$$

the diagram

$$\begin{array}{ccc}
 X \times (Y \amalg Z) & \xrightarrow{f \times (g \amalg h)} & X' \times (Y' \amalg Z') \\
 \delta_{\ell|X,Y,Z}^{\mathbf{Sets}} \downarrow & & \downarrow \delta_{\ell|X',Y',Z'}^{\mathbf{Sets}} \\
 (X \times Y) \amalg (X \times Z) & \xrightarrow{(f \times g) \amalg (f \times h)} & (X' \times Y') \amalg (X' \times Z')
 \end{array}$$

commutes. Indeed, this diagram acts on elements as

$$\begin{array}{ccc}
 (x, (0, y)) & \xmapsto{\quad} & (f(x), (0, f(y))) \\
 \downarrow & & \downarrow \\
 (0, (x, y)) \xmapsto{\quad} (0, (f(x), g(y))) & & (0, (f(x), g(y))) \\
 \\
 (x, (1, z)) & \xmapsto{\quad} & (f(x), (1, h(z))) \\
 \downarrow & & \downarrow \\
 (1, (x, z)) \xmapsto{\quad} (1, (f(x), h(z))) & & (1, (f(x), h(z))),
 \end{array}$$

so it commutes, showing $\delta_{\ell}^{\mathbf{Sets}}$ to be a natural transformation.

Being a Natural Isomorphism

Since $\delta_{\ell}^{\mathbf{Sets}}$ is natural and $\delta_{\ell}^{\mathbf{Sets}, -1}$ is a componentwise inverse to $\delta_{\ell}^{\mathbf{Sets}}$, it follows from [Categories, Item 2](#) of [Proposition 11.9.7.1.2](#) that $\delta_{\ell}^{\mathbf{Sets}, -1}$ is also natural. Thus $\delta_{\ell}^{\mathbf{Sets}}$ is a natural isomorphism. 

5.3.2 The Right Distributor

DEFINITION 5.3.2.1.1 ► THE RIGHT DISTRIBUTOR OF \times OVER \amalg

The **right distributor of the product of sets over the coproduct of sets** is the natural isomorphism

$$\delta_r^{\mathbf{Sets}}: \times \circ (\amalg \times \text{id}_{\mathbf{Sets}}) \xrightarrow{\sim} \amalg \circ ((\times) \times (\times)) \circ \mu_{4|\mathbf{Sets}, \mathbf{Sets}, \mathbf{Sets}, \mathbf{Sets}}^{\mathbf{Cats}_2} \circ ((\text{id}_{\mathbf{Sets}} \times \text{id}_{\mathbf{Sets}}) \times \Delta_{\mathbf{Sets}})$$

as in the diagram

whose component

$$\delta_{r|X,Y,Z}^{\text{Sets}}: (X \amalg Y) \times Z \xrightarrow{\sim} (X \times Z) \amalg (Y \times Z)$$

at (X, Y, Z) is defined by

$$\delta_{r|X,Y,Z}^{\text{Sets}}(a, z) \stackrel{\text{def}}{=} \begin{cases} (0, (x, z)) & \text{if } a = (0, x), \\ (1, (y, z)) & \text{if } a = (1, y) \end{cases}$$

for each $(a, z) \in (X \amalg Y) \times Z$.

PROOF 5.3.2.1.2 ► PROOF OF THE CLAIMS MADE IN DEFINITION 5.3.2.1.1

Invertibility

The inverse of $\delta_{r|X,Y,Z}^{\text{Sets}}$ is the map

$$\delta_{r|X,Y,Z}^{\text{Sets},-1}: (X \times Z) \amalg (Y \times Z) \xrightarrow{\sim} (X \amalg Y) \times Z$$

given by

$$\delta_{r|X,Y,Z}^{\text{Sets},-1}(a) \stackrel{\text{def}}{=} \begin{cases} ((0, x), z) & \text{if } a = (0, (x, z)), \\ ((1, y), z) & \text{if } a = (1, (y, z)) \end{cases}$$

for $a \in (X \times Z) \amalg (Y \times Z)$. Indeed:

- *Invertibility I.* The map $\delta_{r|X,Y,Z}^{\text{Sets},-1} \circ \delta_{r|X,Y,Z}^{\text{Sets}}$ acts on elements as

$$\begin{aligned} ((0, x), z) &\mapsto (0, (x, z)) \mapsto (0, (x, z)), \\ ((1, y), z) &\mapsto (1, (y, z)) \mapsto (1, (y, z)), \end{aligned}$$

but these are the two possible cases for elements of $(X \amalg Y) \times Z$. Hence the map is equal to the identity.

- *Invertibility II.* The map $\delta_{r|X,Y,Z}^{\text{Sets}} \circ \delta_{r|X,Y,Z}^{\text{Sets},-1}$ acts on elements as

$$\begin{aligned} (0, (x, z)) &\mapsto ((0, x), z) \mapsto (0, (x, z)), \\ (1, (y, z)) &\mapsto ((1, y), z) \mapsto (1, (y, z)), \end{aligned}$$

but these are the two possible cases for elements of $(X \times Z) \amalg (Y \times Z)$. Hence the map is equal to the identity.

So $\delta_{r|X,Y,Z}^{\text{Sets}}$ is an isomorphism for all X, Y, Z .

Naturality

We need to show that, given functions

$$\begin{aligned} f: X &\rightarrow X', \\ g: Y &\rightarrow Y', \\ h: Z &\rightarrow Z' \end{aligned}$$

the diagram

$$\begin{array}{ccc}
 (X \amalg Y) \times Z' & \xrightarrow{(f \amalg g) \times h} & (X' \amalg Y') \times Z' \\
 \delta_{r|X,Y,Z}^{\text{Sets}} \downarrow & & \downarrow \delta_{r|X',Y',Z'}^{\text{Sets}} \\
 (X \times Z) \amalg (Y \times Z) & \xrightarrow{(f \times h) \amalg (g \times h)} & (X' \times Z') \amalg (Y' \times Z')
 \end{array}$$

commutes. Indeed, this diagram acts on elements as

$$\begin{array}{ccc}
 ((0, x), z) & \xmapsto{\quad} & ((0, f(x)), h(z)) \\
 \downarrow & & \downarrow \\
 (0, (x, z)) \xmapsto{\quad} (0, (f(x), h(z))) & & (0, (f(x), h(z))) \\
 \\
 ((1, y), z) & \xmapsto{\quad} & ((1, g(y)), h(z)) \\
 \downarrow & & \downarrow \\
 (1, (y, z)) \xmapsto{\quad} (1, (g(y), h(z))) & & (1, (g(y), h(z)))
 \end{array}$$

so it commutes and δ_r^{Sets} is a natural transformation.

Being a Natural Isomorphism

Since δ_r^{Sets} is natural and $\delta_r^{\text{Sets}, -1}$ is a componentwise inverse to δ_r^{Sets} , it follows from **Categories, Item 2** of **Proposition 11.9.7.1.2** that $\delta_r^{\text{Sets}, -1}$ is also natural. Thus δ_r^{Sets} is a natural isomorphism. 

5.3.3 The Left Annihilator

DEFINITION 5.3.3.1.1 ► THE LEFT ANNIHILATOR OF \times

The **left annihilator of the product of sets** is the natural isomorphism

$$\zeta_\ell^{\text{Sets}} : \mathbb{0}^{\text{Sets}} \circ \mu_{4|\text{Sets}, \text{Sets}, \text{Sets}, \text{Sets}}^{\text{Cats}_2} \circ (\text{id}_{\text{pt}} \times \epsilon_{\text{Sets}}^{\text{Cats}_2}) \xRightarrow{\sim} \times \circ (\mathbb{0}^{\text{Sets}} \times \text{id}_{\text{Sets}})$$

as in the diagram

with components

$$\zeta_{\ell|A}^{\text{Sets}} : \emptyset \times A \dashrightarrow \emptyset$$

given by $\zeta_{\ell|A}^{\text{Sets}} \stackrel{\text{def}}{=} \text{pr}_1$.

PROOF 5.3.3.1.2 ► PROOF OF THE CLAIMS MADE IN DEFINITION 5.3.3.1.1

Invertibility

The inverse of $\zeta_{\ell|A}^{\text{Sets}}$ is the map

$$\zeta_{\ell|A}^{\text{Sets}, -1} : \emptyset \dashrightarrow \emptyset \times A$$

given by

$$\zeta_{\ell|A}^{\text{Sets}, -1} \stackrel{\text{def}}{=} \iota_A,$$

where ι_A is as defined in [Constructions With Sets, Construction 4.2.1.1.2](#):

- *Invertibility I.* The map $\zeta_{\ell|A}^{\text{Sets}} \circ \iota_A : \emptyset \rightarrow \emptyset$ is equal to id_{\emptyset} , as \emptyset is the initial object of **Sets**.
- *Invertibility II.* The map $\iota_A \circ \zeta_{\ell|A}^{\text{Sets}}$ is equal to the identity on every $(x, a) \in \emptyset \times A$, of which there are none.

Hence $\zeta_{\ell|A}^{\text{Sets}}$ is an isomorphism.

Naturality

We need to show that given a function $f: A \rightarrow B$, the diagram

$$\begin{array}{ccc} \emptyset \times A & \xrightarrow{\text{id}_{\emptyset} \times f} & \emptyset \times B \\ \zeta_{\ell|A}^{\text{Sets}} \downarrow & & \downarrow \zeta_{\ell|B}^{\text{Sets}} \\ \emptyset & \xrightarrow{\text{id}_{\emptyset}} & \emptyset \end{array}$$

commutes. But since $\emptyset \times A$ has no elements, this is trivially true.

Being a Natural Isomorphism

Since $\zeta_{\ell}^{\text{Sets}}$ is natural and $\zeta_{\ell}^{\text{Sets}, -1}$ is a componentwise inverse to $\zeta_{\ell}^{\text{Sets}}$, it follows from **Categories, Item 2** of **Proposition 11.9.7.1.2** that $\zeta_{\ell}^{\text{Sets}, -1}$ is also natural. Thus $\zeta_{\ell}^{\text{Sets}}$ is a natural isomorphism. 

5.3.4 The Right Annihilator

DEFINITION 5.3.4.1.1 ► THE RIGHT ANNIHILATOR OF \times

The **right annihilator of the product of sets** is the natural isomorphism

$$\zeta_r^{\text{Sets}} : \emptyset^{\text{Sets}} \circ \mu_{4|\text{Sets}, \text{Sets}, \text{Sets}, \text{Sets}}^{\text{Cats}_2} \circ (\epsilon_{\text{Sets}}^{\text{Cats}_2} \times \text{id}_{\text{pt}}) \xrightarrow{\sim} \times \circ (\text{id}_{\text{Sets}} \times \emptyset^{\text{Sets}})$$

as in the diagram

$$\begin{array}{ccccc}
 & & \text{pt} \times \text{pt} & & \\
 & \nearrow \epsilon_{\text{Sets}}^{\text{Cats}_2} \times \text{id}_{\text{pt}} & & \nwarrow \mu_{4|\text{Sets}, \text{Sets}, \text{Sets}, \text{Sets}}^{\text{Cats}_2} & \\
 \text{Sets} \times \text{pt} & & & & \text{pt} \\
 \searrow \text{id}_{\text{Sets}} \times \emptyset^{\text{Sets}} & \swarrow \zeta_r^{\text{Sets}} & & \searrow \emptyset^{\text{Sets}} & \\
 \text{Sets} \times \text{Sets} & \xrightarrow{\times} & \text{Sets} & &
 \end{array}$$

with components

$$\zeta_{r|A}^{\text{Sets}} : A \times \emptyset \xrightarrow{\sim} \emptyset$$

given by $\zeta_{r|A}^{\text{Sets}} \stackrel{\text{def}}{=} \text{pr}_2$.

PROOF 5.3.4.1.2 ► PROOF OF THE CLAIMS MADE IN DEFINITION 5.3.4.1.1**Invertibility**

The inverse of $\zeta_{r|A}^{\text{Sets}}$ is the map

$$\zeta_{r|A}^{\text{Sets}, -1} : \emptyset \xrightarrow{\sim} A \times \emptyset$$

given by

$$\zeta_{r|A}^{\text{Sets}, -1} \stackrel{\text{def}}{=} \iota_A,$$

where ι_A is as defined in **Constructions With Sets, Construction 4.2.1.1.2**:

- *Invertibility I.* The map $\zeta_{r|A}^{\text{Sets}} \circ \iota_A : \emptyset \rightarrow \emptyset$ is equal to id_{\emptyset} , as \emptyset is the initial object of **Sets**.
- *Invertibility II.* The map $\iota_A \circ \zeta_{r|A}^{\text{Sets}}$ is equal to the identity on every $(a, x) \in A \times \emptyset$, of which there are none.

Hence $\zeta_{r|A}^{\mathbf{Sets}}$ is an isomorphism.

Naturality

We need to show that given a function $f: A \rightarrow B$, the diagram

$$\begin{array}{ccc} A \times \emptyset & \xrightarrow{f \times \text{id}_{\emptyset}} & B \times \emptyset \\ \zeta_{r|A}^{\mathbf{Sets}} \downarrow & & \downarrow \zeta_{r|B}^{\mathbf{Sets}} \\ \emptyset & \xrightarrow{\text{id}_{\emptyset}} & \emptyset \end{array}$$

commutes. But since $A \times \emptyset$ has no elements, this is trivially true.

Being a Natural Isomorphism

Since $\zeta_r^{\mathbf{Sets}}$ is natural and $\zeta_r^{\mathbf{Sets}, -1}$ is a componentwise inverse to $\zeta_r^{\mathbf{Sets}}$, it follows from [Categories, Item 2](#) of [Proposition 11.9.7.1.2](#) that $\zeta_r^{\mathbf{Sets}, -1}$ is also natural. Thus $\zeta_r^{\mathbf{Sets}}$ is a natural isomorphism. 

5.3.5 The Bimonoidal Category of Sets, Products, and Coproducts

PROPOSITION 5.3.5.1.1 ► THE BIMONOIDAL STRUCTURE ON SETS ASSOCIATED TO \times AND \amalg

The category **Sets** admits a closed symmetric bimonoidal category structure consisting of:

- *The Underlying Category.* The category **Sets** of pointed sets.
- *The Additive Monoidal Product.* The coproduct functor

$$\amalg: \mathbf{Sets} \times \mathbf{Sets} \rightarrow \mathbf{Sets}$$

of [Constructions With Sets, Item 1](#) of [Proposition 4.2.3.1.4](#).

- *The Multiplicative Monoidal Product.* The product functor

$$\times: \mathbf{Sets} \times \mathbf{Sets} \rightarrow \mathbf{Sets}$$

of [Constructions With Sets, Item 1](#) of [Proposition 4.1.3.1.4](#).

- *The Monoidal Unit.* The functor

$$\mathbb{1}^{\text{Sets}} : \text{pt} \rightarrow \text{Sets}$$

of [Definition 5.1.3.1.1](#).

- *The Monoidal Zero.* The functor

$$\mathbb{0}^{\text{Sets}} : \text{pt} \rightarrow \text{Sets}$$

of [Definition 5.1.3.1.1](#).

- *The Internal Hom.* The internal Hom functor

$$\text{Sets} : \text{Sets}^{\text{op}} \times \text{Sets} \rightarrow \text{Sets}$$

of [Constructions With Sets](#), ?? of ??.

- *The Additive Associators.* The natural isomorphism

$$\alpha^{\text{Sets}, \mathbb{I}} : \mathbb{I} \circ (\mathbb{I} \times \text{id}_{\text{Sets}}) \xrightarrow{\sim} \mathbb{I} \circ (\text{id}_{\text{Sets}} \times \mathbb{I}) \circ \alpha_{\text{Sets}, \text{Sets}, \text{Sets}}^{\text{Cats}}$$

of [Definition 5.2.3.1.1](#).

- *The Additive Left Unitors.* The natural isomorphism

$$\lambda^{\text{Sets}, \mathbb{I}} : \mathbb{I} \circ (\mathbb{0}^{\text{Sets}} \times \text{id}_{\text{Sets}}) \xrightarrow{\sim} \lambda_{\text{Sets}}^{\text{Cats}_2}$$

of [Definition 5.2.4.1.1](#).

- *The Additive Right Unitors.* The natural isomorphism

$$\rho^{\text{Sets}, \mathbb{I}} : \mathbb{I} \circ (\text{id} \times \mathbb{0}^{\text{Sets}}) \xrightarrow{\sim} \rho_{\text{Sets}}^{\text{Cats}_2}$$

of [Definition 5.2.5.1.1](#).

- *The Additive Symmetry.* The natural isomorphism

$$\sigma^{\text{Sets}, \mathbb{I}} : \mathbb{I} \xrightarrow{\sim} \mathbb{I} \circ \sigma_{\text{Sets}, \text{Sets}}^{\text{Cats}_2}$$

of [Definition 5.2.6.1.1](#).

- *The Multiplicative Associators.* The natural isomorphism

$$\alpha^{\text{Sets}}: \times \circ (\times \times \text{id}_{\text{Sets}}) \xrightarrow{\sim} \times \circ (\text{id}_{\text{Sets}} \times \times) \circ \alpha_{\text{Sets}, \text{Sets}, \text{Sets}}^{\text{Cats}}$$

of Definition 5.1.4.1.1.

- *The Multiplicative Left Unitors.* The natural isomorphism

$$\lambda^{\text{Sets}}: \times \circ (\mathbb{1}^{\text{Sets}} \times \text{id}_{\text{Sets}}) \xrightarrow{\sim} \lambda_{\text{Sets}}^{\text{Cats}_2}$$

of Definition 5.1.5.1.1.

- *The Multiplicative Right Unitors.* The natural isomorphism

$$\rho^{\text{Sets}}: \times \circ (\text{id} \times \mathbb{1}^{\text{Sets}}) \xrightarrow{\sim} \rho_{\text{Sets}}^{\text{Cats}_2}$$

of Definition 5.1.6.1.1.

- *The Multiplicative Symmetry.* The natural isomorphism

$$\sigma^{\text{Sets}}: \times \xrightarrow{\sim} \times \circ \sigma_{\text{Sets}, \text{Sets}}^{\text{Cats}_2}$$

of Definition 5.1.7.1.1.

- *The Left Distributor.* The natural isomorphism

$$\delta_{\ell}^{\text{Sets}}: \times \circ (\text{id}_{\text{Sets}} \times \coprod) \xrightarrow{\sim} \coprod \circ ((\times) \times (\times)) \circ \mu_{4|\text{Sets}, \text{Sets}, \text{Sets}, \text{Sets}}^{\text{Cats}_2} \circ (\Delta_{\text{Sets}} \times (\text{id}_{\text{Sets}} \times \text{id}_{\text{Sets}}))$$

of Definition 5.3.1.1.1.

- *The Right Distributor.* The natural isomorphism

$$\delta_r^{\text{Sets}}: \times \circ (\coprod \times \text{id}_{\text{Sets}}) \xrightarrow{\sim} \coprod \circ ((\times) \times (\times)) \circ \mu_{4|\text{Sets}, \text{Sets}, \text{Sets}, \text{Sets}}^{\text{Cats}_2} \circ ((\text{id}_{\text{Sets}} \times \text{id}_{\text{Sets}}) \times \Delta_{\text{Sets}})$$

of Definition 5.3.2.1.1.

- *The Left Annihilator.* The natural isomorphism

$$\zeta_{\ell}^{\text{Sets}}: \mathbb{0}^{\text{Sets}} \circ \mu_{4|\text{Sets}, \text{Sets}, \text{Sets}, \text{Sets}}^{\text{Cats}_2} \circ (\text{id}_{\text{pt}} \times \epsilon_{\text{Sets}}^{\text{Cats}_2}) \xrightarrow{\sim} \times \circ (\mathbb{0}^{\text{Sets}} \times \text{id}_{\text{Sets}})$$

of Definition 5.3.3.1.1.

- *The Right Annihilator.* The natural isomorphism

$$\zeta_r^{\text{Sets}}: \mathbb{0}^{\text{Sets}} \circ \mu_{4|\text{Sets}, \text{Sets}, \text{Sets}, \text{Sets}}^{\text{Cats}_2} \circ (\epsilon_{\text{Sets}}^{\text{Cats}_2} \times \text{id}_{\text{pt}}) \xrightarrow{\sim} \times \circ (\text{id}_{\text{Sets}} \times \mathbb{0}^{\text{Sets}})$$

of Definition 5.3.4.1.1.
