01UG **13.1 Moduli Categories of Monoidal Structures**

01UH **13.1.1 The Moduli Category of Monoidal Structures on a Category**

Let  $C$  be a category.

**01UJ Definition 13.1.1.1.1.** The **moduli category of monoidal structures on  $C$**  is the category  $\mathcal{M}_{\mathbb{B}_1}(C)$  defined by

$$\mathcal{M}_{\mathbb{B}_1}(C) \stackrel{\text{def}}{=} \text{pt} \times_{\text{Cats}} \text{MonCats}, \quad \begin{array}{ccc} \mathcal{M}_{\mathbb{B}_1}(C) & \longrightarrow & \text{MonCats} \\ \downarrow & \lrcorner & \downarrow \text{忘} \\ \text{pt} & \xrightarrow{[C]} & \text{Cats.} \end{array}$$

**01UK Remark 13.1.1.1.2.** In detail, **the moduli category of monoidal structures on  $C$**  is the category  $\mathcal{M}_{\mathbb{B}_1}(C)$  where:

- *Objects.* The objects of  $\mathcal{M}_{\mathbb{B}_1}(C)$  are monoidal categories  $(C, \otimes_C, \mathbb{1}_C, \alpha^C, \lambda^C, \rho^C)$  whose underlying category is  $C$ .
- *Morphisms.* A morphism from  $(C, \otimes_C, \mathbb{1}_C, \alpha^C, \lambda^C, \rho^C)$  to  $(C, \boxtimes_C, \mathbb{1}'_C, \alpha^{C'}, \lambda^{C'}, \rho^{C'})$  is a strong monoidal functor structure

$$\begin{aligned} \text{id}_C^\otimes : A \boxtimes_C B &\xrightarrow{\sim} A \otimes_C B, \\ \text{id}_{\mathbb{1}|C}^\otimes : \mathbb{1}'_C &\xrightarrow{\sim} \mathbb{1}_C \end{aligned}$$

on the identity functor  $\text{id}_C : C \rightarrow C$  of  $C$ .

- *Identities.* For each  $M \stackrel{\text{def}}{=} (C, \otimes_C, \mathbb{1}_C, \alpha^C, \lambda^C, \rho^C) \in \text{Obj}(\mathcal{M}_{\mathbb{B}_1}(C))$ , the unit map

$$\mathbb{1}_{M,M}^{\mathcal{M}_{\mathbb{B}_1}(C)} : \text{pt} \rightarrow \text{Hom}_{\mathcal{M}_{\mathbb{B}_1}(C)}(M, M)$$

of  $\mathcal{M}_{\mathbb{B}_1}(C)$  at  $M$  is defined by

$$\text{id}_M^{\mathcal{M}_{\mathbb{B}_1}(C)} \stackrel{\text{def}}{=} (\text{id}_C^\otimes, \text{id}_{\mathbb{1}|C}^\otimes),$$

where  $(\text{id}_C^\otimes, \text{id}_{\mathbb{1}|C}^\otimes)$  is the identity monoidal functor of  $C$  of ??.

- *Composition.* For each  $M, N, P \in \text{Obj}(\mathcal{M}_{\mathbb{B}_1}(C))$ , the composition map

$$\circ_{M,N,P}^{\mathcal{M}_{\mathbb{B}_1}(C)} : \text{Hom}_{\mathcal{M}_{\mathbb{B}_1}(C)}(N, P) \times \text{Hom}_{\mathcal{M}_{\mathbb{B}_1}(C)}(M, N) \rightarrow \text{Hom}_{\mathcal{M}_{\mathbb{B}_1}(C)}(M, P)$$

of  $\mathcal{M}_{\mathbb{B}_1}(C)$  at  $(M, N, P)$  is defined by

$$\left( \text{id}_C^{\otimes'}, \text{id}_{\mathbb{1}|C}^{\otimes'} \right) \circ_{M,N,P}^{\mathcal{M}_{\mathbb{B}_1}(C)} \left( \text{id}_C^\otimes, \text{id}_{\mathbb{1}|C}^\otimes \right) \stackrel{\text{def}}{=} \left( \text{id}_C^{\otimes'} \circ \text{id}_C^\otimes, \text{id}_{\mathbb{1}|C}^{\otimes'} \circ \text{id}_{\mathbb{1}|C}^\otimes \right).$$

**01UL Remark 13.1.1.1.3.** In particular, a morphism in  $\mathcal{M}_{\mathbb{B}_1}(C)$  from  $(C, \otimes_C, \mathbb{1}_C, \alpha^C, \lambda^C, \rho^C)$  to  $(C, \boxtimes_C, \mathbb{1}'_C, \alpha^{C'}, \lambda^{C'}, \rho^{C'})$  satisfies the following conditions:

- 01UM 1. *Naturality*. For each pair  $f: A \rightarrow X$  and  $g: B \rightarrow Y$  of morphisms of  $C$ , the diagram

$$\begin{array}{ccc} A \boxtimes_C B & \xrightarrow{f \boxtimes_C g} & X \boxtimes_C Y \\ \text{id}_{A,B}^\otimes \downarrow & & \downarrow \text{id}_{X,Y}^\otimes \\ A \otimes_C B & \xrightarrow{f \otimes_C g} & X \otimes_C Y \end{array}$$

commutes.

- 01UN 2. *Monoidality*. For each  $A, B, C \in \text{Obj}(C)$ , the diagram

$$\begin{array}{ccc} & (A \boxtimes_C B) \boxtimes_C C & \\ \text{id}_{A,B}^\otimes \boxtimes \text{id}_C \swarrow & & \searrow \alpha_{A,B,C}^{C'} \\ (A \otimes_C B) \boxtimes_C C & & A \boxtimes_C (B \boxtimes_C C) \\ \text{id}_{A \otimes_C B, C}^\otimes \downarrow & & \downarrow \text{id}_A \boxtimes \text{id}_{B,C}^\otimes \\ (A \otimes_C B) \otimes_C C & & A \boxtimes_C (B \otimes_C C) \\ \alpha_{A,B,C}^C \searrow & & \swarrow \text{id}_{A,B \otimes_C C}^\otimes \\ & A \otimes_C (B \otimes_C C) & \end{array}$$

commutes.

- 01UP 3. *Left Monoidal Unity*. For each  $A \in \text{Obj}(C)$ , the diagram

$$\begin{array}{ccc} & \mathbb{1}_C \boxtimes_C A & \xrightarrow{\text{id}_{\mathbb{1}_C, A}^\otimes} \mathbb{1}_C \otimes_C A \\ \text{id}_{\mathbb{1}_C}^\otimes \boxtimes \text{id}_A \nearrow & & \searrow \lambda_A^C \\ \mathbb{1}'_C \boxtimes_C A & \xrightarrow{\lambda_A^{C'}} & A \end{array}$$

commutes.

- 01UQ 4. *Right Monoidal Unity*. For each  $A \in \text{Obj}(C)$ , the diagram

$$\begin{array}{ccc} & A \boxtimes_C \mathbb{1}_C & \xrightarrow{\text{id}_{A, \mathbb{1}_C}^\otimes} A \otimes_C \mathbb{1}_C \\ \text{id}_A \boxtimes \text{id}_{\mathbb{1}_C}^\otimes \nearrow & & \searrow \rho_A^C \\ A \boxtimes_C \mathbb{1}'_C & \xrightarrow{\rho_A^{C'}} & A \end{array}$$

commutes.

**01UR Proposition 13.1.1.1.4.** Let  $C$  be a category.

**01US** 1. *Extra Monoidality Conditions.* Let  $(\text{id}_C^\otimes, \text{id}_{1|C}^\otimes)$  be a morphism of  $\mathcal{M}_{\mathbb{B}_1}(C)$  from  $(C, \otimes_C, 1_C, \alpha^C, \lambda^C, \rho^C)$  to  $(C, \boxtimes_C, 1'_C, \alpha^{C'}, \lambda^{C'}, \rho^{C'})$ .

**01UT** (a) The diagram

$$\begin{array}{ccc} (A \boxtimes_C B) \boxtimes_C C & \xrightarrow{\text{id}_{A,B}^\otimes \boxtimes \text{id}_C} & (A \otimes_C B) \boxtimes_C C \\ \text{id}_{A \boxtimes_C B, C}^\otimes \downarrow & & \downarrow \text{id}_{A \otimes_C B, C}^\otimes \\ (A \boxtimes_C B) \otimes_C C & \xrightarrow{\text{id}_{A,B}^\otimes \otimes \text{id}_C} & (A \otimes_C B) \otimes_C C \end{array}$$

commutes.

**01UU** (b) The diagram

$$\begin{array}{ccc} A \boxtimes_C (B \boxtimes_C C) & \xrightarrow{\text{id}_A \boxtimes \text{id}_{B,C}^\otimes} & A \boxtimes_C (B \otimes_C C) \\ \text{id}_{A, B \boxtimes_C C}^\otimes \downarrow & & \downarrow \text{id}_{A, B \otimes_C C}^\otimes \\ A \otimes_C (B \boxtimes_C C) & \xrightarrow{\text{id}_A \otimes \text{id}_{B,C}^\otimes} & A \otimes_C (B \otimes_C C) \end{array}$$

commutes.

**01WB** 2. *Extra Monoidal Unity Constraints.* Let  $(\text{id}_C^\otimes, \text{id}_{1|C}^\otimes)$  be a morphism of  $\mathcal{M}_{\mathbb{B}_1}(C)$  from  $(C, \otimes_C, 1_C, \alpha^C, \lambda^C, \rho^C)$  to  $(C, \boxtimes_C, 1'_C, \alpha^{C'}, \lambda^{C'}, \rho^{C'})$ .

**01WC** (a) The diagram

$$\begin{array}{ccc} 1_C \otimes_C 1'_C & \xrightarrow{\text{id}_{1_C, 1'_C}^{\otimes, -1}} & 1_C \boxtimes_C 1'_C \\ \lambda_{1'_C}^C \downarrow & & \downarrow \rho_{1_C}^{C'} \\ 1'_C & \xrightarrow{\text{id}_{1_C}^\otimes} & 1_C \end{array}$$

commutes.

01WD (b) The diagram

$$\begin{array}{ccc}
 \mathbb{1}'_C \otimes_C \mathbb{1}_C & \xrightarrow{\text{id}_{\mathbb{1}_C, \mathbb{1}'_C}^{\otimes, -1}} & \mathbb{1}'_C \boxtimes_C \mathbb{1}_C \\
 \rho_{\mathbb{1}'_C}^C \downarrow & & \downarrow \lambda_{\mathbb{1}_C}^{C, ' } \\
 \mathbb{1}'_C & \xrightarrow{\text{id}_{\mathbb{1}}^{\otimes}} & \mathbb{1}_C
 \end{array}$$

commutes.

01WE (c) The diagram

$$\begin{array}{ccc}
 \mathbb{1}'_C \boxtimes_C \mathbb{1}_C & \xrightarrow{\text{id}_{\mathbb{1}_C, \mathbb{1}'_C}^{\otimes}} & \mathbb{1}'_C \otimes_C \mathbb{1}_C \\
 \lambda_{\mathbb{1}_C}^{C, ' } \downarrow & & \downarrow \rho_{\mathbb{1}'_C}^C \\
 \mathbb{1}_C & \xrightarrow{\text{id}_{\mathbb{1}}^{\otimes, -1}} & \mathbb{1}'_C
 \end{array}$$

commutes.

01WF (d) The diagram

$$\begin{array}{ccc}
 \mathbb{1}_C \boxtimes_C \mathbb{1}'_C & \xrightarrow{\text{id}_{\mathbb{1}_C, \mathbb{1}'_C}^{\otimes}} & \mathbb{1}_C \otimes_C \mathbb{1}'_C \\
 \rho_{\mathbb{1}_C}^{C, ' } \downarrow & & \downarrow \lambda_{\mathbb{1}'_C}^C \\
 \mathbb{1}_C & \xrightarrow{\text{id}_{\mathbb{1}}^{\otimes, -1}} & \mathbb{1}'_C
 \end{array}$$

commutes.

01UV 3. *Mixed Associators.* Let  $(C, \otimes_C, \mathbb{1}_C, \alpha^C, \lambda^C, \rho^C)$  and  $(C, \boxtimes_C, \mathbb{1}'_C, \alpha^{C, ' }, \lambda^{C, ' }, \rho^{C, ' })$  be monoidal structures on  $C$  and let

$$\text{id}_{-1, -2}^{\otimes} : -1 \boxtimes_C -2 \rightarrow -1 \otimes_C -2$$

be a natural transformation.

01UW (a) If there exists a natural transformation

$$\alpha_{A, B, C}^{\otimes} : (A \otimes_C B) \boxtimes_C C \rightarrow A \otimes_C (B \boxtimes_C C)$$

making the diagrams

$$\begin{array}{ccc}
 (A \otimes_C B) \boxtimes_C C & \xrightarrow{\alpha_{A,B,C}^\otimes} & A \otimes_C (B \boxtimes_C C) \\
 \text{id}_{A \otimes_C B, C}^\otimes \downarrow & & \downarrow \text{id}_A \otimes_C \text{id}_{B, C}^\otimes \\
 (A \otimes_C B) \otimes_C C & \xrightarrow{\alpha_{A,B,C}^C} & A \otimes_C (B \otimes_C C)
 \end{array}$$

and

$$\begin{array}{ccc}
 (A \boxtimes_C B) \boxtimes_C C & \xrightarrow{\alpha_{A,B,C}^{C, \prime}} & A \boxtimes_C (B \boxtimes_C C) \\
 \text{id}_{A, B}^\otimes \boxtimes_C \text{id}_C \downarrow & & \downarrow \text{id}_{A, B \boxtimes_C C} \\
 (A \otimes_C B) \boxtimes_C C & \xrightarrow{\alpha_{A,B,C}^\otimes} & A \otimes_C (B \boxtimes_C C)
 \end{array}$$

commute, then the natural transformation  $\text{id}^\otimes$  satisfies the monoidality condition of **Item 2** of **Definition 13.1.1.1.3**.

01UX

(b) If there exists a natural transformation

$$\alpha_{A,B,C}^\boxtimes: (A \boxtimes_C B) \otimes_C C \rightarrow A \boxtimes_C (B \otimes_C C)$$

making the diagrams

$$\begin{array}{ccc}
 (A \boxtimes_C B) \otimes_C C & \xrightarrow{\alpha_{A,B,C}^\boxtimes} & A \boxtimes_C (B \otimes_C C) \\
 \text{id}_{A, B}^\otimes \otimes_C \text{id}_C \downarrow & & \downarrow \text{id}_{A, B \otimes_C C}^\otimes \\
 (A \otimes_C B) \otimes_C C & \xrightarrow{\alpha_{A,B,C}^C} & A \otimes_C (B \otimes_C C)
 \end{array}$$

and

$$\begin{array}{ccc}
 (A \boxtimes_C B) \boxtimes_C C & \xrightarrow{\alpha_{A,B,C}^{C, \prime}} & A \boxtimes_C (B \boxtimes_C C) \\
 \text{id}_{A \boxtimes_C B, C}^\otimes \downarrow & & \downarrow \text{id}_A \boxtimes_C \text{id}_{B, C}^\otimes \\
 (A \boxtimes_C B) \otimes_C C & \xrightarrow{\alpha_{A,B,C}^\boxtimes} & A \boxtimes_C (B \otimes_C C)
 \end{array}$$

commute, then the natural transformation  $\text{id}^\otimes$  satisfies the monoidality condition of **Item 2** of **Definition 13.1.1.1.3**.

01UY

(c) If there exists a natural transformation

$$\alpha_{A,B,C}^{\boxtimes, \otimes}: (A \boxtimes_C B) \otimes_C C \rightarrow A \otimes_C (B \boxtimes_C C)$$

making the diagrams

$$\begin{array}{ccc} (A \boxtimes_C B) \otimes_C C & \xrightarrow{\alpha_{A,B,C}^{\boxtimes, \otimes}} & A \otimes_C (B \boxtimes_C C) \\ \text{id}_{A,B}^{\otimes} \otimes_C \text{id}_C \downarrow & & \downarrow \text{id}_A \otimes_C \text{id}_{B,C}^{\otimes} \\ (A \otimes_C B) \otimes_C C & \xrightarrow{\alpha_{A,B,C}^C} & A \otimes_C (B \otimes_C C) \end{array}$$

and

$$\begin{array}{ccc} (A \boxtimes_C B) \boxtimes_C C & \xrightarrow{\alpha_{A,B,C}^{C, \boxtimes}} & A \boxtimes_C (B \boxtimes_C C) \\ \text{id}_{A \boxtimes_C B, C}^{\otimes} \downarrow & & \downarrow \text{id}_{A, B \boxtimes_C C}^{\otimes} \\ (A \boxtimes_C B) \otimes_C C & \xrightarrow{\alpha_{A,B,C}^{\boxtimes, \otimes}} & A \otimes_C (B \boxtimes_C C) \end{array}$$

commute, then the natural transformation  $\text{id}^{\otimes}$  satisfies the monoidality condition of **Item 2** of **Definition 13.1.1.1.3**.

*Proof.* **Item 1, Extra Monoidality Conditions:** We claim that **Items 1a** and **1b** are indeed true:

1. *Proof of Item 1a:* This follows from the naturality of  $\text{id}^{\otimes}$  with respect to the morphisms  $\text{id}_{A,B}^{\otimes}$  and  $\text{id}_C$ .
2. *Proof of Item 1b:* This follows from the naturality of  $\text{id}^{\otimes}$  with respect to the morphisms  $\text{id}_A$  and  $\text{id}_{B,C}^{\otimes}$ .

This finishes the proof.

**Item 2, Extra Monoidal Unity Constraints:** We claim that **Items 2a** and **2b** are indeed true:

1. *Proof of Item 1a:* Indeed, consider the diagram

whose boundary diagram is the diagram whose commutativity we wish to prove. Since:

- Subdiagram (1) commutes by the naturality of  $\text{id}_C^{\otimes, -1}$ ;
- Subdiagram (2) commutes trivially;
- Subdiagram (3) commutes by the naturality of  $\lambda^C$ , where the equality  $\rho_{1_C}^C = \lambda_{1_C}^C$  comes from ??;
- Subdiagram (4) commutes by the right monoidal unity of  $(\text{id}_C, \text{id}_C^{\otimes}, \text{id}_{C|1}^{\otimes})$ ;

2. *Proof of Item 1b*: Indeed, consider the diagram

- Subdiagram (1) commutes by the naturality of  $\text{id}_C^{\otimes, -1}$ ;
- Subdiagram (2) commutes trivially;
- Subdiagram (3) commutes by the naturality of  $\rho^C$ , where the equality  $\rho_{\mathbb{1}_C}^C = \lambda_{\mathbb{1}_C}^C$  comes from ??;

- Subdiagram (4) commutes by the left monoidal unity of  $(\mathrm{id}_C, \mathrm{id}_C^\otimes, \mathrm{id}_{C|1}^\otimes)$ ;

so does the boundary diagram, and we are done.

3. *Proof of Item 2c:* Indeed, consider the diagram

$$\begin{array}{ccccc}
 1'_C \otimes_C 1_C & \xrightarrow{\mathrm{id}_{1_C, 1'_C}^{\otimes, -1}} & 1'_C \boxtimes_C 1_C & \xrightarrow{\mathrm{id}_{1_C, 1'_C}^\otimes} & 1'_C \otimes_C 1_C \\
 \rho_{1'_C}^C \downarrow & & \downarrow \lambda_{1_C}^{C, '}& & \downarrow \rho_{1'_C}^C \\
 1'_C & \xrightarrow{\mathrm{id}_1^\otimes} & 1_C & \xrightarrow{\mathrm{id}_1^{\otimes, -1}} & 1'_C.
 \end{array}
 \quad \begin{array}{c} (1) \qquad \qquad (\dagger) \end{array}$$

Since:

- The boundary diagram commutes trivially;
- Subdiagram (1) commutes by **Item 1b**;

it follows that the diagram

$$\begin{array}{ccccc}
 1'_C \otimes_C 1_C & \xrightarrow{\mathrm{id}_{1_C, 1'_C}^{\otimes, -1}} & 1'_C \boxtimes_C 1_C & \xrightarrow{\mathrm{id}_{1_C, 1'_C}^\otimes} & 1'_C \otimes_C 1_C \\
 & & \downarrow \lambda_{1_C}^{C, '}& & \downarrow \rho_{1'_C}^C \\
 & & 1_C & \xrightarrow{\mathrm{id}_1^{\otimes, -1}} & 1'_C
 \end{array}
 \quad (\dagger)$$

commutes. But since  $\mathrm{id}_{1_C, 1'_C}^{\otimes, -1}$  is an isomorphism, it follows that the diagram  $(\dagger)$  also commutes, and we are done.

4. *Proof of Item 2d:* Indeed, consider the diagram

$$\begin{array}{ccccc}
 1_C \otimes_C 1'_C & \xrightarrow{\mathrm{id}_{1_C, 1'_C}^{\otimes, -1}} & 1_C \boxtimes_C 1'_C & \xrightarrow{\mathrm{id}_{1_C, 1'_C}^{\otimes, -1}} & 1_C \otimes_C 1'_C \\
 \lambda_{1'_C}^C \downarrow & & \downarrow \rho_{1_C}^{C, '}& & \downarrow \lambda_{1'_C}^C \\
 1'_C & \xrightarrow{\mathrm{id}_1^\otimes} & 1_C & \xrightarrow{\mathrm{id}_1^{\otimes, -1}} & 1_C
 \end{array}
 \quad \begin{array}{c} (1) \qquad \qquad (\dagger) \end{array}$$

Since:

- The boundary diagram commutes trivially;
- Subdiagram (1) commutes by **Item 1a**;

it follows that the diagram

$$\begin{array}{ccccc}
 \mathbb{1}_C \otimes_C \mathbb{1}'_C & \xrightarrow{\text{id}_{\mathbb{1}_C, \mathbb{1}'_C}^{\otimes, -1}} & \mathbb{1}_C \boxtimes_C \mathbb{1}'_C & \xrightarrow{\text{id}_{\mathbb{1}_C, \mathbb{1}'_C}^{\otimes, -1}} & \mathbb{1}_C \otimes_C \mathbb{1}'_C \\
 & & \downarrow \rho_{\mathbb{1}_C}^{C, \prime} & (\dagger) & \downarrow \lambda_{\mathbb{1}'_C}^C \\
 & & \mathbb{1}_C & \xrightarrow{\text{id}_{\mathbb{1}}^{\otimes, -1}} & \mathbb{1}_C
 \end{array}$$

commutes. But since  $\text{id}_{\mathbb{1}}^{\otimes, -1}$  is an isomorphism, it follows that the diagram  $(\dagger)$  also commutes, and we are done.

This finishes the proof.

**Item 3, Mixed Associators:** We claim that **Items 3a to 3c** are indeed true:

- 01UZ 1. *Proof of Item 3a:* We may partition the monoidality diagram for  $\text{id}^{\otimes}$  of **Item 2** of **Definition 13.1.1.1.3** as follows:

$$\begin{array}{ccccc}
 & & (A \boxtimes_C B) \boxtimes_C C & & \\
 & \swarrow \text{id}_{A,B}^{\otimes} \boxtimes \text{id}_C & \downarrow & \searrow \alpha_{A,B,C}^C & \\
 (A \otimes_C B) \boxtimes_C C & & \text{id}_{A \boxtimes_C B, C}^{\otimes} & & A \boxtimes_C (B \boxtimes_C C) \\
 \downarrow \text{id}_{A \otimes_C B, C}^{\otimes} & (1) & \downarrow & (2) & \downarrow \text{id}_A \boxtimes \text{id}_{B,C}^{\otimes} \\
 (A \otimes_C B) \otimes_C C & & (A \boxtimes_C B) \otimes_C C & & A \boxtimes_C (B \otimes_C C) \\
 & \swarrow \text{id}_{A,B}^{\otimes} \otimes \text{id}_C & \downarrow & \searrow \alpha_{A,B,C}^{\otimes} & \\
 & (3) & & & \\
 & \swarrow \alpha_{A,B,C}^{C, \prime} & & \searrow \text{id}_{A, B \otimes_C C}^{\otimes} & \\
 & A \otimes_C (B \otimes_C C) & & & 
 \end{array}$$

Since:

- Subdiagram (1) commutes by **Item 1a** of **Item 1**.
- Subdiagram (2) commutes by assumption.
- Subdiagram (3) commutes by assumption.

it follows that the boundary diagram also commutes, i.e.  $\text{id}^\otimes$  satisfies the monoidality condition of **Item 2** of **Definition 13.1.1.1.3**.

- 01V0 2. *Proof of Item 3b:* We may partition the monoidality diagram for  $\text{id}^\otimes$  of **Item 2** of **Definition 13.1.1.1.3** as follows:

Since:

- Subdiagram (1) commutes by assumption.
- Subdiagram (2) commutes by assumption.
- Subdiagram (3) commutes by **Item 1b** of **Item 1**.

it follows that the boundary diagram also commutes, i.e.  $\text{id}^\otimes$  satisfies the monoidality condition of **Item 2** of **Definition 13.1.1.1.3**.

- 01V1 3. *Proof of Item 3c:* We may partition the monoidality diagram for  $\text{id}^\otimes$  of

Item 2 of Definition 13.1.1.1.3 as follows:

$$\begin{array}{ccccc}
 & (A \boxtimes_C B) \boxtimes_C C & & & \\
 \text{id}_{A,B}^\otimes \boxtimes_C \text{id}_C \swarrow & & \searrow \alpha_{A,B,C}^C & & \\
 (A \otimes_C B) \boxtimes_C C & & & A \boxtimes_C (B \boxtimes_C C) & \\
 \downarrow \text{id}_{A \otimes_C B, C}^\otimes & \searrow \alpha_{A,B,C}^{\boxtimes, \otimes} & (1) & \downarrow \text{id}_A \boxtimes_C \text{id}_{B,C}^\otimes & \\
 (A \otimes_C B) \otimes_C C & & & A \boxtimes_C (B \otimes_C C) & \\
 \downarrow \alpha_{A,B,C}^{C, \vee} & & (2) & \downarrow \text{id}_{A, B \otimes_C C}^\otimes & \\
 & A \otimes_C (B \otimes_C C) & & &
 \end{array}$$

Since subdiagrams (1) and (2) commute by assumption, it follows that the boundary diagram also commutes, i.e.  $\text{id}^\otimes$  satisfies the monoidality condition of Item 2 of Definition 13.1.1.1.3.

This finishes the proof.  $\square$
