# Presheaves and the Yoneda Lemma

# The Clowder Project Authors

# July 29, 2025

O2H3 This chapter contains some material about presheaves and the Yoneda lemma.

This chapter is under revision. TODO:

- 1. Subsection properties of categories of copresheaves
- 2. Adjointness of tensor product of functors
- 3. Limit of category of elements (instead of colimit)
- 4. Category of elements where objects are natural transformations  $\mathcal{F} \Rightarrow h_X$  instead of the other way around. Is this related to Isbell duality?
- 5. Motivate the proof of the Yoneda lemma as in Martin's comment here: https://mathoverflow.net/questions/130883/are-there-proof s-that-you-feel-you-did-not-understand-for-a-long-time#co mment360113\_131050
- 6. Add discussion of universal properties
- 7. Add  $h_{g \circ f} = h_g \circ h_f$  to properties of representable natural transformations

# **O2H6 DEFINITION 12.1.1.1.1 ▶** Presheaves on a Category

A presheaf on C is a functor  $\mathcal{F} \colon C^{\mathsf{op}} \to \mathsf{Sets}$ .

# **O2H7** EXAMPLE 12.1.1.1.2 ▶ Presheaves on One-Object Categories

Presheaves on the delooping  $\mathsf{B} A$  of a monoid A are precisely the left A-sets; see Monoid Actions,  $\ref{eq:A}$ .

# 02H8 DEFINITION 12.1.1.1.3 ➤ MORPHISMS OF PRESHEAVES

A morphism of presheaves on C from  $\mathcal{F}$  to  $\mathcal{G}$  is a natural transformation  $\alpha \colon \mathcal{F} \Rightarrow \mathcal{G}$ .

# 02H9 DEFINITION 12.1.1.1.4 ► THE CATEGORY OF PRESHEAVES ON A CATEGORY

The category of presheaves on C is the category  $PSh(C)^1$  defined by

$$\mathsf{PSh}(C) \stackrel{\text{def}}{=} \mathsf{Fun}(C^{\mathsf{op}},\mathsf{Sets}).$$

<sup>1</sup>Further Notation: Also written  $\hat{C}$  in some parts of the literature.

# 02HA REMARK 12.1.1.1.5 ➤ UNWINDING DEFINITION 12.1.1.1.4

In detail, the **category of presheaves on** C is the category  $\mathsf{PSh}(C)$  where

- Objects. The objects of PSh(C) are presheaves on C as in Definition 12.1.1.1.1.
- Morphisms. The morphisms of PSh(C) are morphisms of presheaves as in Definition 12.1.1.1.3, i.e. we have

$$\operatorname{Hom}_{\mathsf{PSh}(\mathcal{C})}(\mathcal{F},\mathcal{G}) \stackrel{\text{def}}{=} \operatorname{Nat}(\mathcal{F},\mathcal{G})$$

for each  $\mathcal{F}, \mathcal{G} \in \mathrm{Obj}(\mathsf{PSh}(\mathcal{C}))$ .

• *Identities*. For each  $\mathcal{F} \in \mathrm{Obj}(\mathsf{PSh}(\mathcal{C}))$ , the unit map

$$\mathbb{1}^{\mathsf{PSh}(\mathcal{C})}_{\mathcal{F}} \colon \mathsf{pt} \to \mathsf{Nat}(\mathcal{F}, \mathcal{F})$$

of  $\mathsf{PSh}(\mathcal{C})$  at  $\mathcal{F}$  is defined by

$$\mathrm{id}_{\mathcal{F}}^{\mathsf{PSh}(\mathcal{C})} \stackrel{\scriptscriptstyle\mathrm{def}}{=} \mathrm{id}_{\mathcal{F}},$$

where  $id_{\mathcal{F}} \colon \mathcal{F} \Rightarrow \mathcal{F}$  is the identity natural transformation of Categories, Example 11.9.3.1.1.

• Composition. For each  $\mathcal{F},\mathcal{G},\mathcal{H}\in \mathrm{Obj}(\mathsf{PSh}(\mathcal{C})),$  the composition map

$$\circ^{\mathsf{PSh}(\mathcal{C})}_{\mathcal{F},\mathcal{G},\mathcal{H}} \colon \operatorname{Nat}(\mathcal{G},\mathcal{H}) \times \operatorname{Nat}(\mathcal{F},\mathcal{G}) \to \operatorname{Nat}(\mathcal{F},\mathcal{H})$$

of  $\mathsf{PSh}(\mathcal{C})$  at  $(\mathcal{F}, \mathcal{G}, \mathcal{H})$  is defined by

$$\beta \circ_{\mathcal{F},\mathcal{C},\mathcal{H}}^{\mathsf{PSh}(\mathcal{C})} \alpha \stackrel{\text{def}}{=} \beta \circ \alpha,$$

where  $\beta \circ \alpha \colon \mathcal{F} \Rightarrow \mathcal{H}$  is the vertical composition of  $\alpha$  and  $\beta$  of Categories, Definition 11.9.4.1.1.

# **02HB** 12.1.2 Representable Presheaves

Let C be a category.

# **02HC DEFINITION 12.1.2.1.1** ▶ REPRESENTABLE PRESHEAVES

Let  $A \in \mathrm{Obj}(\mathcal{C})$ .

02HD

1. The representable presheaf associated to A is the presheaf

$$h_A \colon C^{\mathsf{op}} \to \mathsf{Sets}$$

where

• Action on Objects. For each  $X \in \mathrm{Obj}(\mathcal{C})$ , we have

$$h_A(X) \stackrel{\text{def}}{=} \text{Hom}_{\mathcal{C}}(X, A).$$

• Action on Morphisms. For each  $X, Y \in \text{Obj}(C)$ , the action on morphisms

 $h_{A|X,Y} \colon \operatorname{Hom}_{\mathcal{C}}(X,Y) \to \operatorname{Hom}_{\mathsf{Sets}}(h_A(Y),h_A(X))$ 

of  $h_A$  at (X,Y) is given by sending a morphism

$$f \colon X \to Y$$

of C to the map of sets

$$h_A(f) \colon \underbrace{h_A(Y)}_{\stackrel{\text{def}}{=} \operatorname{Hom}_{\mathcal{C}}(Y,A)} \to \underbrace{h_A(X)}_{\stackrel{\text{def}}{=} \operatorname{Hom}_{\mathcal{C}}(X,A)}$$

defined by

$$h_A(f) \stackrel{\text{def}}{=} f^*,$$

where  $f^*$  is the precomposition by f morphism of Categories, Item 1 of Definition 11.1.4.1.1.

02HE

2. A representing object for a presheaf  $\mathcal{F}: C^{\mathsf{op}} \to \mathsf{Sets}$  on C is an object A of C such that we have  $\mathcal{F} \cong h_A$ .

02HF

3. A presheaf  $\mathcal{F} \colon C^{op} \to \mathsf{Sets}$  on C is **representable** if  $\mathcal{F}$  admits a representing object.

02HG

#### **EXAMPLE 12.1.2.1.2** ▶ Representable Presheaves on One-Object Categories

The representable presheaf on the delooping  $\mathsf{B}A$  of a monoid A associated to the unique object  $\bullet$  of  $\mathsf{B}A$  is the left regular representation of A of Monoid Actions,  $\ref{eq:A}$ .

02HH

# PROPOSITION 12.1.2.1.3 ► UNIQUENESS OF REPRESENTING OBJECTS UP TO ISOMORPHISM

Let  $\mathcal{F}: \mathbb{C}^{op} \to \mathsf{Sets}$  be a presheaf. If there exist  $A, B \in \mathsf{Obj}(\mathbb{C})$  such that we have natural isomorphisms

$$h_A \cong \mathcal{F},$$
  
 $h_B \cong \mathcal{F},$ 

then  $A \cong B$ .

# PROOF 12.1.2.1.4 ▶ PROOF OF PROPOSITION 12.1.2.1.3

By composing the isomorphisms  $h_A \cong \mathcal{F} \cong h_B$ , we get a natural isomorphism  $h_A \cong h_B$ . By Item 2 of Proposition 12.1.4.1.3, we have  $A \cong B$ .

# 02HJ 12.1.3 Representable Natural Transformations

Let C be a category, let  $A, B \in \mathrm{Obj}(C)$ , and let  $f: A \to B$  be a morphism of C.

02HK

#### **DEFINITION 12.1.3.1.1** ► REPRESENTABLE NATURAL TRANSFORMATIONS

The representable natural transformation associated to f is the natural transformation

$$h_f \colon h_A \Rightarrow h_B$$

consisting of the collection

$$\left\{h_{f|X}: \underbrace{h_A(X)}_{\overset{\text{def}}{=} \operatorname{Hom}_{\mathcal{C}}(X,A)} \to \underbrace{h_B(X)}_{\overset{\text{def}}{=} \operatorname{Hom}_{\mathcal{C}}(X,B)}\right\}_{X \in \operatorname{Obj}(\mathcal{C})}$$

with

$$h_{f|X} \stackrel{\text{def}}{=} f_*,$$

where  $f_*$  is the postcomposition by f morphism of Categories, Item 2 of Definition 11.1.4.1.1.

# **02HL** 12.1.4 The Yoneda Embedding

# 02HM DEFINITION 12.1.4.1.1 ► THE YONEDA EMBEDDING

The Yoneda embedding of  $C^1$  is the functor<sup>2</sup>

$$\sharp_{\mathcal{C}} \colon \mathcal{C} \hookrightarrow \mathsf{PSh}(\mathcal{C})$$

where

• Action on Objects. For each  $A \in \text{Obj}(C)$ , we have

$$\sharp_{\mathcal{C}}(A) \stackrel{\text{def}}{=} h_A.$$

• Action on Morphisms. For each  $A, B \in \mathrm{Obj}(\mathcal{C})$ , the action on morphisms

$$\sharp_{C|A,B} \colon \operatorname{Hom}_{\mathcal{C}}(A,B) \to \operatorname{Nat}(h_A,h_B)$$

of  $\mathcal{L}_C$  at (A, B) is given by

$$\sharp_{C|A,B}(f) \stackrel{\text{def}}{=} h_f$$

for each  $f \in \text{Hom}_{\mathcal{C}}(A, B)$ , where  $h_f$  is the representable natural transformation associated to f of Definition 12.1.3.1.1.

<sup>&</sup>lt;sup>1</sup>Further Terminology: Also called the **covariant Yoneda embedding** to distinguish it from the contravariant Yoneda embedding of Theorem 12.2.5.1.1.

<sup>&</sup>lt;sup>2</sup>Further Notation: Also written  $h_{(-)}$ , or simply  $\xi$ .

# 02HN REMARK 12.1.4.1.2 ➤ ON THE USAGE OF ₺ TO DENOTE THE YONEDA EMBEDDING

The notation  $\sharp$  for the Yoneda embedding was first introduced in [JS17]. The symbol  $\sharp$  is the hiragana for yo, and comes from "Yoneda" in Nobuo Yoneda (米田信夫).

It is pronounced yo but without letting the "o" in yo sound like an o-u diphthong:

- See here.
- IPA transcription: [jo].

# 02HP PROPOSITION 12.1.4.1.3 ▶ PROPERTIES OF THE YONEDA EMBEDDING

Let C be a category.

02HQ

02HR

**02HS** 

02HT

02HV

1. Fully Faithfulness. The Yoneda embedding

$$\sharp_{\mathcal{C}} \colon \mathcal{C} \hookrightarrow \mathsf{PSh}(\mathcal{C})$$

is fully faithful.

2. Preservation and Reflection of Isomorphisms. The Yoneda embedding

$$\sharp_{\mathcal{C}}\colon \mathcal{C}\hookrightarrow \mathsf{PSh}(\mathcal{C})$$

preserves and reflects isomorphisms, i.e. given  $A, B \in \mathrm{Obj}(\mathcal{C})$ , the following conditions are equivalent:

- (a) We have  $A \cong B$ .
- (b) We have  $h_A \cong h_B$ .
- **02HU** 3. Density. The Yoneda embedding

$${\sharp_{\mathit{C}}}\colon {\mathit{C}} \hookrightarrow \mathsf{PSh}({\mathit{C}})$$

is dense.

4. Interaction With Density Comonads. We have

$$\operatorname{Lan}_{{\boldsymbol{\xi}}}({\boldsymbol{\xi}})\cong\operatorname{id}_{\mathsf{PSh}(C)}, \qquad \qquad \stackrel{{\boldsymbol{\xi}_{\mathcal{C}}}}{\downarrow} \bigvee_{\operatorname{Lan}_{{\boldsymbol{\xi}}}({\boldsymbol{\xi}})} C \xrightarrow{{\boldsymbol{\xi}_{\mathcal{C}}}} \mathsf{PSh}(C).$$

02HW

5. Interaction With Codensity Monads. We have

$$\operatorname{Ran}_{\sharp}(\sharp) \cong \operatorname{Spec} \circ O$$
,

where Spec and O are the functors of ??.

# PROOF 12.1.4.1.4 ▶ PROOF OF PROPOSITION 12.1.4.1.3

# Item 1: Fully Faithfulness

Let  $A, B \in \text{Obj}(\mathcal{C})$ . Applying the Yoneda lemma (Theorem 12.1.5.1.1) to the functor  $h_B$  (i.e. in the case  $\mathcal{F} = h_B$ ), we have

$$\operatorname{Hom}_{\mathcal{C}}(A,B) \cong \operatorname{Nat}(h_A,h_B),$$

and the natural isomorphism

$$\xi_{A,B} \colon h_B(A) \Rightarrow \operatorname{Nat}(h_A, h_B)$$

witnessing this bijection is given by

$$\xi_{A,B}(g)_X \stackrel{\text{def}}{=} h_g^X$$
$$\stackrel{\text{def}}{=} g_*$$

for each  $X \in \text{Obj}(\mathcal{C})$  and each  $g \in h_B^X$ , i.e. we have  $\xi_{A,B} = \sharp_{\mathcal{C}|A,B}$ . Thus  $\sharp_{\mathcal{C}}$  is fully faithful.

# Item 2: Preservation and Reflection of Isomorphisms

This follows from Categories, Item 1 of Proposition 11.5.1.1.8 and Item 3 of Proposition 11.6.3.1.2.

# Item 3: Density

Omitted.

Item 4: Interaction With Density Comonads

Omitted.

Item 5: Interaction With Codensity Monads

Omitted.

# 02HX 12.1.5 The Yoneda Lemma

Let  $\mathcal{F} \colon C^{\mathsf{op}} \to \mathsf{Sets}$  be a presheaf on C.

# 02HY THEOREM 12.1.5.1.1 ► THE YONEDA LEMMA

We have a bijection

$$\operatorname{Nat}(h_A, \mathcal{F}) \cong \mathcal{F}(A),$$

natural in  $A \in \text{Obj}(C)$ , determining a natural isomorphism of functors

$$\operatorname{Nat}(h_{(-)},\mathcal{F}) \cong \mathcal{F}.$$

# PROOF 12.1.5.1.2 ► PROOF OF THEOREM 12.1.5.1.1

The Transformation ev:  $\operatorname{Nat}(h_{(-)}, \mathcal{F}) \Rightarrow \mathcal{F}$ 

Let

ev: 
$$\operatorname{Nat}(h_{(-)}, \mathcal{F}) \Rightarrow \mathcal{F}$$

be the transformation consisting of the collection

$$\{\operatorname{ev}_A\colon\operatorname{Nat}(h_A,\mathcal{F})\to\mathcal{F}(A)\}_{A\in\operatorname{Obj}(C)}$$

with

$$\operatorname{ev}_A(\alpha) = \alpha_A(\operatorname{id}_A)$$

for each  $\alpha \in \text{Nat}(h_A, \mathcal{F})$ , where  $\alpha_A$  is the component

$$\alpha_A \colon \operatorname{Hom}_{\mathcal{C}}(A,A) \to \mathcal{F}(A)$$

of  $\alpha$  at A.

The Transformation  $\xi \colon \mathcal{F} \Rightarrow \operatorname{Nat}(h_{(-)}, \mathcal{F})$ 

Let

$$\xi \colon \mathcal{F} \Rightarrow \operatorname{Nat}(h_{(-)}, \mathcal{F})$$

be the transformation consisting of the collection

$$\{\xi_A \colon \mathcal{F}(A) \to \operatorname{Nat}(h_A, \mathcal{F})\}_{A \in \operatorname{Obj}(C)},$$

where  $\xi_A$  is the map sending an element  $\phi \in \mathcal{F}(A)$  to the transformation

$$\xi_A(\phi) \colon h_A \Rightarrow \mathcal{F}$$

(which we will show is natural in a bit) consisting of the collection

$$\{\xi_A(\phi)_X \colon h_A(X) \to \mathcal{F}(X)\}_{X \in \mathrm{Obj}(C)},$$

with

$$\xi_A(\phi)_X(f) \stackrel{\text{def}}{=} [\mathcal{F}(f)](\phi)$$

for each  $f \in h_A(X)$ , where

$$\mathcal{F}(f) \colon \mathcal{F}(A) \to \mathcal{F}(X)$$

is the image of f by  $\mathcal{F}$ .

# Naturality of $\xi_A(\phi) \colon h_A \Rightarrow \mathcal{F}$

The transformation

$$\xi_A(\phi) \colon h_A \Rightarrow \mathcal{F}$$

is indeed natural, as the diagram

$$h_A^Y \xrightarrow{f^*} h_A^X$$

$$\xi_A(\phi)_Y \downarrow \qquad \qquad \qquad \downarrow \xi_A(\phi)_X$$

$$\mathcal{F}(Y) \xrightarrow{\mathcal{F}(f)} \mathcal{F}(X)$$

commutes for each morphism  $f \colon X \to Y$  of  $\mathcal{C}$ , acting on elements as

$$\begin{array}{cccc} h & & & h \longmapsto h \circ f \\ & & & & & \downarrow \\ & & & & & \downarrow \\ [\mathcal{F}(h)](\phi) & \longmapsto & [\mathcal{F}(f)]([\mathcal{F}(h)](\phi)) & & [\mathcal{F}(h \circ f)(\phi)], \end{array}$$

where we have

$$[\mathcal{F}(f)]([\mathcal{F}(h)](\phi)) = [\mathcal{F}(h \circ f)(\phi)]$$

by the functoriality of  $\mathcal{F}$ .

# Naturality of ev: Nat $(h_{(-)}, \mathcal{F}) \Rightarrow \mathcal{F}$

Let  $f: X \to Y$  be a morphism of C. We claim the naturality diagram

for ev at f, acting on elements as

$$\begin{array}{ccc}
\alpha & & & & & & & & & & & \\
\downarrow & & & & & & & & \downarrow \\
\alpha_Y(\mathrm{id}_Y) & & & & & & & \downarrow \\
\alpha_Y(\mathrm{id}_Y) & & & & & & & & [\alpha \circ h_f]_X(\mathrm{id}_X), & & & & & \\
\end{array}$$

commutes. Indeed:

• We have

$$[\alpha \circ h_f]_X(\mathrm{id}_X) \stackrel{\mathrm{def}}{=} [\alpha_X \circ h_{f|X}](\mathrm{id}_X)$$

$$\stackrel{\mathrm{def}}{=} [\alpha_X \circ f_*](\mathrm{id}_X)$$

$$\stackrel{\mathrm{def}}{=} \alpha_X(f_*(\mathrm{id}_X))$$

$$\stackrel{\mathrm{def}}{=} \alpha_X(f).$$

• Applying the naturality diagram

$$h_Y^Y \xrightarrow{f^*} h_Y^X$$

$$\alpha_Y \downarrow \qquad \qquad \downarrow \alpha_X$$

$$\mathcal{F}(Y) \xrightarrow{\mathcal{F}(f)} \mathcal{F}(X)$$

of  $\alpha: h_Y \Rightarrow \mathcal{F}$  at  $f: X \to Y$  to the element  $\mathrm{id}_Y$  of  $h_Y^Y$ , we have

$$id_{Y} \longmapsto f$$

$$\downarrow$$

$$\alpha_{Y}(id_{Y}) \longmapsto [\mathcal{F}(f)](\alpha_{Y}(id_{Y})) \qquad \alpha_{X}(f),$$

showing that we have

$$[\mathcal{F}(f)](\alpha_Y(\mathrm{id}_Y)) = \alpha_X(f).$$

Thus the naturality diagram for ev at f commutes, and ev is natural.

Naturality of 
$$\xi \colon \mathcal{F} \Rightarrow \operatorname{Nat}(h_{(-)}, \mathcal{F})$$

Let  $f: X \to Y$  be a morphism of C. We claim the naturality diagram

$$\begin{array}{ccc}
\mathcal{F}(Y) & \xrightarrow{\mathcal{F}(f)} & \mathcal{F}(X) \\
\downarrow^{\xi_Y} & & \downarrow^{\xi_X} \\
\operatorname{Nat}(h_Y, \mathcal{F}) & \xrightarrow[\left(h_f\right)^*]{} \operatorname{Nat}(h_X, \mathcal{F})
\end{array}$$

for  $\xi$  at f, acting on elements as

$$\phi \qquad \phi \longmapsto [\mathcal{F}(f)](\phi)$$

$$\downarrow \qquad \qquad \qquad \downarrow$$

$$\xi_Y(\phi) \longmapsto \xi_Y(\phi) \circ h_f \qquad \qquad \xi_X([\mathcal{F}(f)](\phi))$$

commutes. Indeed, for each  $X \in \mathrm{Obj}(\mathcal{C})$  and each  $g \in h_X^A$ , we have

$$[\xi_Y(\phi) \circ h_f]_X(g) \stackrel{\text{def}}{=} [\xi_Y(\phi)_X \circ h_{f|X}](g)$$

$$\stackrel{\text{def}}{=} [\xi_Y(\phi)_X \circ f_*](g)$$

$$\stackrel{\text{def}}{=} \xi_Y(\phi)_X (f_*(g))$$

$$\stackrel{\text{def}}{=} \xi_Y(\phi)_X(f \circ g)$$

$$\stackrel{\text{def}}{=} [\mathcal{F}(f \circ g)](\phi)$$

and

$$\begin{aligned} [\xi_X([\mathcal{F}(f)](\phi))]_X(g) &\stackrel{\text{def}}{=} \mathcal{F}(g)([\mathcal{F}(f)](\phi)) \\ &= [\mathcal{F}(f \circ g)](\phi), \end{aligned}$$

where we have used the functoriality of  $\mathcal{F}$ . Thus  $\xi_Y(\phi) \circ h_f$  and  $\xi_X([\mathcal{F}(f)](\phi))$  are equal, and the naturality diagram for  $\xi$  at f above commutes, showing  $\xi$  to be natural.

# Invertibility I: $\operatorname{ev} \circ \xi = \operatorname{id}_{\mathcal{F}}$

We claim that  $\operatorname{ev} \circ \xi = \operatorname{id}_{\mathcal{F}}$ , i.e. that we have

$$(\operatorname{ev} \circ \xi)_A = \operatorname{id}_{\mathcal{F}(A)}$$

for each  $A \in \text{Obj}(\mathcal{C})$ . Indeed, we have

$$[\operatorname{ev} \circ \xi]_{A}(\phi) \stackrel{\text{def}}{=} [\operatorname{ev}_{A} \circ \xi_{A}](\phi)$$

$$\stackrel{\text{def}}{=} \operatorname{ev}_{A}(\xi_{A}(\phi))$$

$$\stackrel{\text{def}}{=} \xi_{A}(\phi)_{A}(\operatorname{id}_{A})$$

$$\stackrel{\text{def}}{=} [\mathcal{F}(\operatorname{id}_{A})](\phi)$$

$$= [\operatorname{id}_{\mathcal{F}(A)}](\phi)$$

for each  $\phi \in \mathcal{F}(A)$ .

# Invertibility II: $\xi \circ \text{ev} = \text{id}_{\text{Nat}(h_{(-)},\mathcal{F})}$

We claim that  $\xi \circ \text{ev} = \text{id}_{\text{Nat}(h_{(-)},\mathcal{F})}$ , i.e. that we have

$$(\xi \circ \operatorname{ev})_A = \operatorname{id}_{\operatorname{Nat}(h_A, \mathcal{F})}$$

for each  $A \in \text{Obj}(\mathcal{C})$ . Indeed:

• We have

$$[\xi \circ \operatorname{ev}]_A(\alpha) \stackrel{\text{def}}{=} [\xi_A \circ \operatorname{ev}_A](\alpha)$$

$$\stackrel{\text{def}}{=} \xi_A(\text{ev}_A(\alpha))$$

$$\stackrel{\text{def}}{=} \xi_A(\alpha_A(\text{id}_A))$$

for each  $\alpha \in \text{Nat}(h_A, \mathcal{F})$ .

• For each  $X \in \text{Obj}(\mathcal{C})$ , we have

$$\xi_A(\alpha_A(\mathrm{id}_A))_X = \alpha_X,$$

since we have

$$\xi_A(\alpha_A(\mathrm{id}_A))_X(f) \stackrel{\text{def}}{=} [\mathcal{F}(f)](\alpha_A(\mathrm{id}_A))$$

$$\stackrel{(\dagger)}{=} \alpha_X(f)$$

for each  $f \in h_A(X)$ , where the equality marked with (†) follows from the commutativity of the naturality diagram

$$h_A^A \xrightarrow{f_*} h_X^A$$

$$\downarrow^{\alpha_A} \qquad \downarrow^{\alpha_X}$$

$$\mathcal{F}(A) \xrightarrow{\mathcal{F}(f)} \mathcal{F}(X)$$

of  $\alpha$  at  $f \colon A \to X$ , which acts on  $\mathrm{id}_A$  as

$$id_{A} \longmapsto f$$

$$\downarrow$$

$$\alpha_{A}(id_{A}) \longmapsto [\mathcal{F}(f)](\alpha_{A}(id_{A})) = \alpha_{X}(f).$$

This finishes the proof.

# 02HZ 12.1.6 Properties of Categories of Presheaves

# 02J0 PROPOSITION 12.1.6.1.1 ▶ PROPERTIES OF CATEGORIES OF PRESHEAVES

Let C be a category.

02J1

02J2

02J3

1. Functoriality. The assignment  $C \mapsto \mathsf{PSh}(C)$  defines a functor

$$\mathsf{PSh}\colon \mathsf{Cats} \to \mathsf{Cats}$$

up to some set-theoretic considerations.<sup>1</sup>

2. Interaction With Slice Categories. Let  $X \in \mathrm{Obj}(\mathcal{C})$ . We have an equivalence of categories

$$\mathsf{PSh}ig(C_{/X}ig)\stackrel{ ext{ iny eq.}}{\cong} \mathsf{PSh}(C)_{/h_X}.$$

3. Interaction With Categories of Elements. Let  $\mathcal{F} \in \mathrm{Obj}(\mathsf{PSh}(\mathcal{C}))$ . We have an equivalence of categories

$$\mathsf{PSh}(\int_{\mathcal{C}} \mathcal{F}) \stackrel{\text{\tiny eq.}}{\cong} \mathsf{PSh}(\mathcal{C})_{/\mathcal{F}}.$$

<sup>1</sup>For instance:

- The Cats in the source of PSh could be small categories, and then the Cats in the right would be locally small categories.
- The Cats in the source of PSh could be locally small categories, and then the Cats on the right would be large categories.

In general, one can systematise and formalise this using Grothendieck universes.

PROOF 12.1.6.1.2 ▶ PROOF OF PROPOSITION 12.1.6.1.1

# Item 1: Functoriality

Omitted.

A morphism of copresheaves on C from F to G is a natural transformation  $\alpha \colon F \Rightarrow G$ .

# 02J9 DEFINITION 12.2.1.1.4 ► THE CATEGORY OF COPRESHEAVES ON A CATEGORY

The category of copresheaves on C is the category  $\mathsf{CoPSh}(C)$  defined by

 $\mathsf{CoPSh}(\mathcal{C}) \stackrel{\scriptscriptstyle\mathrm{def}}{=} \mathsf{Fun}(\mathcal{C},\mathsf{Sets}).$ 

# 02JA REMARK 12.2.1.1.5 ► UNWINDING DEFINITION 12.2.1.1.4

In detail, the **category of copresheaves on** C is the category  $\mathsf{CoPSh}(C)$  where

- Objects. The objects of  $\mathsf{CoPSh}(\mathcal{C})$  are copresheaves on  $\mathcal{C}$  as in Definition 12.2.1.1.1.
- *Morphisms*. The morphisms of CoPSh(C) are morphisms of copresheaves as in Definition 12.2.1.1.3, i.e. we have

$$\operatorname{Hom}_{\mathsf{CoPSh}(C)}(F,G) \stackrel{\text{def}}{=} \operatorname{Nat}(F,G)$$

for each  $F, G \in \text{Obj}(\mathsf{CoPSh}(\mathcal{C}))$ .

• Identities. For each  $F \in \text{Obj}(\mathsf{CoPSh}(C))$ , the unit map

$$\mathbb{1}_F^{\mathsf{CoPSh}(C)} \colon \mathsf{pt} \to \mathsf{Nat}(F,F)$$

of CoPSh(C) at F is defined by

$$\mathrm{id}_F^{\mathsf{CoPSh}(C)} \stackrel{\mathrm{def}}{=} \mathrm{id}_F,$$

where  $id_F: F \Rightarrow F$  is the identity natural transformation of Categories, Example 11.9.3.1.1.

• Composition. For each  $F, G, H \in \text{Obj}(\mathsf{CoPSh}(\mathcal{C}))$ , the composition map

$$\circ_{F,G,H}^{\mathsf{CoPSh}(C)} \colon \operatorname{Nat}(G,H) \times \operatorname{Nat}(F,G) \to \operatorname{Nat}(F,H)$$

of CoPSh(C) at (F, G, H) is defined by

$$\beta \circ^{\mathsf{CoPSh}(\mathcal{C})}_{F,G,H} \alpha \stackrel{\scriptscriptstyle \mathrm{def}}{=} \beta \circ \alpha,$$

where  $\beta \circ \alpha \colon F \Rightarrow H$  is the vertical composition of  $\alpha$  and  $\beta$  of Categories, Definition 11.9.4.1.1.

# 02JB 12.2.2 Corepresentable Copresheaves

Let C be a category.

# 02JC DEFINITION 12.2.2.1.1 ➤ COREPRESENTABLE COPRESHEAVES

Let  $A \in \mathrm{Obj}(\mathcal{C})$ .

02JD

1. The **corepresentable copresheaf associated to** A is the copresheaf

$$h^A \colon \mathcal{C} \to \mathsf{Sets}$$

where

• Action on Objects. For each  $X \in \text{Obj}(\mathcal{C})$ , we have

$$h^A(X) \stackrel{\text{def}}{=} \text{Hom}_{\mathcal{C}}(A, X).$$

• Action on Morphisms. For each  $X,Y\in \mathrm{Obj}(\mathcal{C}),$  the action on morphisms

$$h_{X,Y}^A \colon \operatorname{Hom}_{\mathcal{C}}(X,Y) \to \operatorname{Hom}_{\mathsf{Sets}}(h^A(X),h^A(Y))$$

of  $h^A$  at (X,Y) is given by sending a morphism

$$f: X \to Y$$

of C to the map of sets

$$h^A(f): \underbrace{h^A(X)}_{\stackrel{\text{def}}{=} \operatorname{Hom}_{\mathcal{C}}(A,X)} \to \underbrace{h^A(Y)}_{\stackrel{\text{def}}{=} \operatorname{Hom}_{\mathcal{C}}(A,Y)}$$

defined by

$$h^A(f) \stackrel{\text{def}}{=} f_*,$$

where  $f_*$  is the postcomposition by f morphism of Categories, Item 2 of Definition 11.1.4.1.1.

- 2. A **corepresenting object** for a copresheaf  $F: \mathbb{C} \to \mathsf{Sets}$  on  $\mathbb{C}$  is an object A of  $\mathbb{C}$  such that we have  $F \cong h^A$ .
- 3. A copresheaf  $F: \mathbb{C}^{op} \to \mathsf{Sets}$  on  $\mathbb{C}$  is **corepresentable** if F admits a corepresenting object.

# Ø2JG EXAMPLE 12.2.2.1.2 ➤ COREPRESENTABLE COPRESHEAVES ON ONE-OBJECT CATEGORIES

The corepresentable copresheaf on the delooping  $\mathsf{B} A$  of a monoid A associated to the unique object  $\bullet$  of  $\mathsf{B} A$  is the right regular representation of A of Monoid Actions,  $\ref{A}$ ?

# Ø2JH PROPOSITION 12.2.2.1.3 ➤ UNIQUENESS OF COREPRESENTING OBJECTS UP TO ISOMORPHISM

Let  $F: \mathbb{C} \to \mathsf{Sets}$  be a copresheaf. If there exist  $A, B \in \mathsf{Obj}(\mathbb{C})$  such that we have natural isomorphisms

$$h^A \cong F$$
,  $h^B \cong F$ .

then  $A \cong B$ .

02JE

02JF

By composing the isomorphisms  $h^A \cong F \cong h^B$ , we get a natural isomorphism  $h^A \cong h^B$ . By Item 2 of Proposition 12.2.4.1.2, we have  $A \cong B$ .

# 02JJ 12.2.3 Corepresentable Natural Transformations

Let C be a category, let  $A, B \in \mathrm{Obj}(C)$ , and let  $f: A \to B$  be a morphism of C.

#### 02JK DEFINITION 12.2.3.1.1 ➤ COREPRESENTABLE NATURAL TRANSFORMATIONS

The corepresentable natural transformation associated to f is the natural transformation

$$h^f: h^B \Rightarrow h^A$$

consisting of the collection

$$\left\{h_X^f\colon \underbrace{h^B(X)}_{\overset{\text{def}}{=}\operatorname{Hom}_{\mathcal{C}}(B,X)} \to \underbrace{h^A(X)}_{\overset{\text{def}}{=}\operatorname{Hom}_{\mathcal{C}}(A,X)}\right\}_{X\in\operatorname{Obj}(\mathcal{C})}$$

with

$$h_X^f \stackrel{\text{def}}{=} f^*,$$

where  $f_*$  is the precomposition by f morphism of Categories, Item 1 of Definition 11.1.4.1.1.

# 02JL 12.2.4 The Contravariant Yoneda Embedding

# 02JM DEFINITION 12.2.4.1.1 ➤ THE CONTRAVARIANT YONEDA EMBEDDING

The contravariant Yoneda embedding of C is the functor<sup>1</sup>

where

• Action on Objects. For each  $A \in \text{Obj}(C)$ , we have

$$\mathbf{T}_{\mathcal{C}}(A) \stackrel{\text{def}}{=} h^A.$$

• Action on Morphisms. For each  $A, B \in \mathrm{Obj}(\mathcal{C})$ , the action on morphisms

$$\mathcal{P}_{C|A,B} \colon \operatorname{Hom}_{\mathcal{C}}(A,B) \to \operatorname{Nat}(h^B,h^A)$$

of  $\Upsilon_C$  at (A, B) is given by

$$\Upsilon_{C|A,B}(f) \stackrel{\text{def}}{=} h^f$$

for each  $f \in \text{Hom}_{\mathcal{C}}(A, B)$ , where  $h^f$  is the corepresentable natural transformation associated to f of Definition 12.2.3.1.1.

Further Notation: Also written  $h^{(-)}$ , or simply  $\mathcal{L}$

1. Fully Faithfulness. The contravariant Yoneda embedding

$$\mathcal{F}_C \colon C^{\mathsf{op}} \hookrightarrow \mathsf{CoPSh}(C)$$

is fully faithful.

2. Preservation and Reflection of Isomorphisms. The contravariant Yoneda embedding

preserves and reflects isomorphisms, i.e. given  $A, B \in \mathrm{Obj}(\mathcal{C})$ , the following conditions are equivalent:

- (a) We have  $A \cong B$ .
- (b) We have  $h^A \cong h^B$ .

# PROOF 12.2.4.1.3 ► PROOF OF PROPOSITION 12.2.4.1.2

# Item 1: Fully Faithfulness

The proof is dual to that of Item 1 of Proposition 12.1.4.1.3, and is

therefore omitted.

# Item 2: Preservation and Reflection of Isomorphisms

This follows from Categories, Item 1 of Proposition 11.5.1.1.8 and Item 3 of Proposition 11.6.3.1.2.

# 02JT 12.2.5 The Contravariant Yoneda Lemma

Let  $F: \mathcal{C} \to \mathsf{Sets}$  be a copresheaf on  $\mathcal{C}$ .

# 02JU THEOREM 12.2.5.1.1 ► THE CONTRAVARIANT YONEDA LEMMA

We have a bijection

$$\operatorname{Nat}(h^A, F) \cong F(A),$$

natural in  $A \in \text{Obj}(C)$ , determining a natural isomorphism of functors

$$\operatorname{Nat}(h^{(-)}, F) \cong F.$$

# PROOF 12.2.5.1.2 ▶ PROOF OF THEOREM 12.2.5.1.1

The proof is dual to that of Theorem 12.1.5.1.1, and is therefore omitted.

# 02JV 12.3 Restricted Yoneda Embeddings and Yoneda Extensions

# 02JW 12.3.1 Foundations

let  $F: \mathcal{C} \to \mathcal{D}$  be a functor.

# 02JX DEFINITION 12.3.1.1.1 ▶ THE RESTRICTED YONEDA EMBEDDING ASSOCIATED TO A FUNCTOR

The restricted Yoneda embedding associated to F is the functor

$$\sharp_F \colon \mathcal{D} \hookrightarrow \mathsf{PSh}(\mathcal{C})$$

defined as the composition

$$\mathcal{D} \stackrel{\sharp_{\mathcal{D}}}{\longrightarrow} \mathsf{PSh}(\mathcal{D}) \xrightarrow{F^{\mathsf{op},*}} \mathsf{PSh}(\mathcal{C}).$$

#### 02JY REMARK 12.3.1.1.2 ➤ UNWINDING DEFINITION 12.3.1.1.1

In detail, the **restricted Yoneda embedding associated to** F is the functor

$$\sharp_F \colon \mathcal{D} \hookrightarrow \mathsf{PSh}(\mathcal{C})$$

where

02K0

• Action on Objects. For each  $A \in \text{Obj}(\mathcal{D})$ , we have

$$\sharp_F(A) \stackrel{\text{def}}{=} h_A \circ F^{\mathsf{op}} \\
\stackrel{\text{def}}{=} h_A^{F(-)}.$$

• Action on Morphisms. For each  $A, B \in \mathrm{Obj}(\mathcal{D})$ , the action on morphisms

$$\mathsf{L}_{F|A,B} \colon \operatorname{Hom}_{\mathcal{D}}(A,B) \to \operatorname{Nat}\left(h_A^{F(-)}, h_B^{F(-)}\right)$$

of  $\mathbf{L}_F$  at (A, B) is given by

for each  $f \in \text{Hom}_{\mathcal{D}}(A, B)$ , where  $h_f$  is the representable natural transformation associated to f of Definition 12.1.3.1.1.

# 02JZ EXAMPLE 12.3.1.1.3 ► EXAMPLES OF RESTRICTED YONEDA EMBEDDINGS

Here are some examples of restricted Yoneda embeddings.

1. The Nerve Functor. Let

$$\iota \colon \mathbb{A} \hookrightarrow \mathsf{Cats}$$

be the functor given by  $[n] \to \mathbb{n}$ . Then the restricted Yoneda embedding

$$oldsymbol{\sharp}_{\iota} \colon \mathsf{Cats} o \underbrace{\mathsf{PSh}(\mathbb{\Delta})}_{\stackrel{\mathrm{def}}{=} \mathsf{SSets}}$$

of  $\iota$  is given by the nerve functor  $N_{\bullet}$  of ??, ??.

02K1

2. The Singular Simplicial Set Associated to a Topological Space. Let

$$\iota \colon \mathbb{\Delta} \hookrightarrow \mathsf{Top}$$

be the functor given by  $[n] \to |\Delta^n|$ . Then the restricted Yoneda embedding

$$oldsymbol{\sharp}_{\iota} \colon \mathsf{Top} o \underbrace{\mathsf{PSh}(\mathbb{\Delta})}_{\substack{\mathrm{def} \ \mathrm{es}\mathsf{Sets}}}$$

of  $\iota$  is given by the singular simplicial set functor Sing $_{\bullet}$  of ??, ??.

02K2

3. The Coherent Nerve Functor. Let

$$\iota \colon \mathbb{A} \hookrightarrow \mathsf{sCats}$$

be the functor given by  $[n] \to \mathsf{Path}(\Delta^n)$ , where  $\mathsf{Path}(\Delta^n)$  is the simplicial category of  $\ref{eq:path}$ . Then the restricted Yoneda embedding

$${\mathcal J}_\iota\colon \mathsf{sCats} \to \underbrace{\mathsf{PSh}({\mathbb A})}_{\stackrel{\mathrm{def}}{=}\mathsf{sSets}}$$

of  $\iota$  is given by the coherent nerve functor  $N^{hc}_{\bullet}$  of ??, ??.

02K3

4. Kan's Ex Functor. Let

$$\operatorname{sd} : \mathbb{A} \hookrightarrow \mathsf{sSets}$$

be the functor given by  $[n] \to \operatorname{Sd}(\Delta^n)$ , where  $\operatorname{Sd}(\Delta^n)$  is the barycentric subdivision of  $\Delta^n$  of ??. Then the restricted Yoneda embedding

$${\color{blue} {\boldsymbol{\mathcal{L}}_{\mathrm{sd}} \colon \mathsf{sSets} \to \underbrace{\mathsf{PSh}(\underline{\mathbb{A}})}_{\stackrel{\mathrm{def}}{\leftarrow} \mathbf{SSets}}}$$

of sd is given by Kan's Ex functor of ??.

02K4

02KD

02KE

02KF

Here are some examples of Yoneda extensions.

1. The Homotopy Category Functor. Let

$$\iota : \mathbb{A} \hookrightarrow \mathsf{Cats}$$

be the functor given by  $[n] \to \mathbb{n}$ . Then the Yoneda extension

$$\operatorname{Lan}_{\mathcal{L}}(\iota) \colon \underbrace{\mathsf{PSh}(\mathbb{\Delta})}_{\stackrel{\operatorname{def}}{=s}\mathsf{Sets}} \to \mathsf{Cats}$$

of  $\iota$  is given by the homotopy category functor Ho of ??, ??.

2. The Geometric Realisation Functor. Let

$$\iota \colon \mathbb{\Delta} \hookrightarrow \mathsf{Top}$$

be the functor given by  $[n] \to |\Delta^n|$ . Then the Yoneda extension

$$\operatorname{Lan}_{\mathcal{L}}(\iota) \colon \underbrace{\mathsf{PSh}(\mathbb{\Delta})}_{\stackrel{\operatorname{def}}{=} \mathsf{SSets}} \to \mathsf{Top}$$

of  $\iota$  is given by the geometric realisation functor |-| of ??, ??.

3. The Path Simplicial Category Functor. Let

$$\iota \colon \mathbb{A} \hookrightarrow \mathsf{sCats}$$

be the functor given by  $[n] \to \mathsf{Path}(\Delta^n)$ , where  $\mathsf{Path}(\Delta^n)$  is the simplicial category of ??, ??. Then the Yoneda extension

$$\operatorname{Lan}_{\sharp}(\iota) \colon \underbrace{\mathsf{PSh}(\mathbb{\Delta})}_{\stackrel{\operatorname{def}}{=} \mathsf{Sets}} \to \mathsf{sCats}$$

of  $\iota$  is given by the path simplicial category functor Path of ??, ??.

4. The Barycentric Subdivision Functor. Let

$$sd: \triangle \hookrightarrow \mathsf{sSets}$$

be the functor given by  $[n] \to \operatorname{Sd}(\Delta^n)$ , where  $\operatorname{Sd}(\Delta^n)$  is the barycentric subdivision of  $\Delta^n$  of ??. Then the Yoneda extension

$$\operatorname{Lan}_{{\boldsymbol{\mathcal{k}}}}(\operatorname{sd}) \colon \underbrace{\operatorname{\mathsf{PSh}}({\boldsymbol{\mathbb{A}}})}_{\overset{\operatorname{def}}{=} \operatorname{\mathsf{SSets}}} \to \operatorname{\mathsf{sSets}}$$

of sd is given by the barycentric subdivision functor Sd of ??.

# 02KG PROPOSITION 12.3.2.1.3 ▶ PROPERTIES OF YONEDA EXTENSIONS

Let  $F \colon \mathcal{C} \to \mathcal{D}$  be a functor with  $\mathcal{C}$  small and  $\mathcal{D}$  cocomplete.

02KH 1. Functoriality. The assignment  $F \mapsto \operatorname{Lan}_{\mathbf{k}}(F)$  defines a functor

$$\operatorname{Lan}_{\mathcal{L}} : \operatorname{\mathsf{Fun}}(\mathcal{C}, \mathcal{D}) \to \operatorname{\mathsf{Fun}}(\operatorname{\mathsf{PSh}}(\mathcal{C}), \mathcal{D}).$$

2. Adjointness. We have an adjunction<sup>1</sup>

$$(\operatorname{Lan}_{\sharp}(F)\dashv \sharp_F)$$
:  $\operatorname{\mathsf{PSh}}(C)$   $\stackrel{\operatorname{Lan}_{\sharp}(F)}{\underset{\sharp_F}{\smile}} \mathcal{D}$ ,

witnessed by a bijection

02KJ

02KK

**02KM** 

$$\operatorname{Hom}_{\mathcal{D}}([\operatorname{Lan}_{\sharp}(F)](\mathcal{F}), D) \cong \operatorname{Nat}(\mathcal{F}, \sharp_F(D)),$$

natural in  $\mathcal{F} \in \mathrm{Obj}(\mathsf{PSh}(\mathcal{C}))$  and  $D \in \mathrm{Obj}(\mathcal{D})$ .

3. Interaction With the Yoneda Embedding. We have a natural isomorphism of functors

$$\operatorname{PSh}(C)$$

$$\operatorname{Lan}_{\sharp}(F) \circ \sharp_{C} \cong F, \qquad \sharp_{C} \nearrow \downarrow_{\operatorname{Lan}_{\sharp}(F)}$$

$$C \xrightarrow{F} \mathcal{D}.$$

**02KL** 4. As a Coend. We have

$$[\operatorname{Lan}_{\sharp}(F)](\mathcal{F}) \cong \int_{A \in \mathcal{C}} \operatorname{Nat}(h_A, \mathcal{F}) \odot F(A)$$
$$\cong \int_{A \in \mathcal{C}} \mathcal{F}(A) \odot F(A)$$

for each  $\mathcal{F} \in \mathrm{Obj}(\mathsf{PSh}(\mathcal{C}))$ .

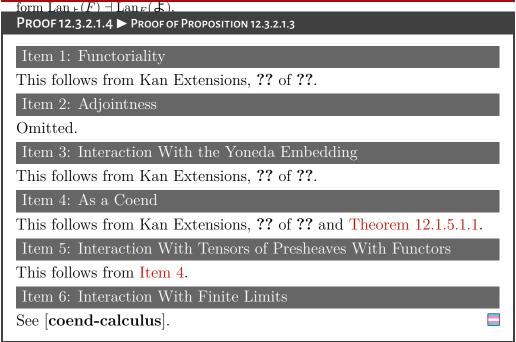

5. Interaction With Tensors of Presheaves With Functors. We have a natural isomorphism

$$\operatorname{Lan}_{\sharp}(F) \cong (-) \odot_{\mathcal{C}} F,$$

natural in  $F \in \text{Obj}(\mathsf{Fun}(\mathcal{C}, \mathcal{D}))$ .

6. Interaction With Finite Limits. Let F: C → Sets be a functor. The following conditions are equivalent:
(a) The functor F preserves finite limits.
(b) The functor Lan<sub>k</sub>(F) preserves finite limits.
(c) The category of elements ∫<sub>C</sub> F of F is cofiltered.

<sup>1</sup>Applying Item 2 of Proposition 12.3.1.1.4, we see that this adjunction has the

Item 3: Interaction With Yoneda Extensions

This is a repetition of Item 5 of Proposition 12.3.2.1.3, and is proved there.

# 02MA 12.4.3 The Tensor of a Copresheaf With a Functor

Let  $\mathcal{C}$  be a category, let  $\mathcal{D}$  be a category with coproducts, let  $F: \mathcal{C} \to \mathsf{Sets}$  be a copresheaf on  $\mathcal{C}$ , and let  $G: \mathcal{C}^{\mathsf{op}} \to \mathcal{D}$  be a functor.

02MB

02MC

# **DEFINITION 12.4.3.1.1** ► THE TENSOR OF A COPRESHEAF WITH A FUNCTOR

The **tensor** of F with G is the set  $F \odot_C G^1$  defined by

$$F \odot_{\mathcal{C}} G \stackrel{\text{def}}{=} \int^{A \in \mathcal{C}} F(A) \odot G(A).$$

<sup>1</sup>Further Notation: Also written simply  $F \odot G$ .

# REMARK 12.4.3.1.2 ► Unwinding Definition 12.4.3.1.1

In other words, the tensor of F with G is the object  $F \odot_{\mathcal{C}} G$  of  $\mathcal{D}$  defined as the coend of the functor

$$C^{\mathsf{op}} \times C \xrightarrow{\sim} C \times C^{\mathsf{op}} \xrightarrow{F \times G} \mathsf{Sets} \times \mathcal{D} \xrightarrow{\odot} \mathcal{D}.$$

#### 02MD PROPOSITION 12.4.3.1.3 ➤ Properties of Tensors of Copresheaves With Functors

Let C be a category.

02ME

02MF

02MG

1. Functoriality. The assignments  $F, G, (F, G) \mapsto F \odot_{\mathcal{C}} G$  define functors

$$\begin{array}{ll} F \odot_{\mathcal{C}} -\colon & \mathsf{CoPSh}(\mathcal{C}) & \to \mathcal{D}, \\ -\odot_{\mathcal{C}} \mathcal{G} \colon & \mathsf{Fun}(\mathcal{C}^\mathsf{op}, \mathcal{D}) & \to \mathcal{D}, \\ -_1 \odot_{\mathcal{C}} -_2 \colon \mathsf{Fun}(\mathcal{C}^\mathsf{op}, \mathcal{D}) \times \mathsf{CoPSh}(\mathcal{C}) \! \to \! \mathcal{D}. \end{array}$$

2. Interaction With Corepresentable Copresheaves. We have an isomorphism

$$h^X \odot_{\mathcal{C}} G \cong G(X),$$

natural in  $X \in \text{Obj}(\mathcal{C})$ , giving a natural isomorphism of functors

$$h^{(-)} \odot_{\mathcal{C}} G \cong G.$$

3. Interaction With Contravariant Yoneda Extensions. We have a natural isomorphism

$$\operatorname{Lan}_{\mathcal{F}}(G) \cong G \odot_{\mathcal{C}} (-),$$

natural in  $G \in \text{Obj}(\mathsf{Fun}(\mathcal{C}^{\mathsf{op}}, \mathcal{D}))$ .
