## Presheaves and the Yoneda Lemma

#### The Clowder Project Authors

July 29, 2025

- This chapter contains some material about presheaves and the Yoneda lemma. This chapter is under revision. TODO:
  - 1. Subsection properties of categories of copresheaves
  - 2. Adjointness of tensor product of functors
  - 3. Limit of category of elements (instead of colimit)
  - 4. Category of elements where objects are natural transformations  $\mathcal{F} \Rightarrow b_X$  instead of the other way around. Is this related to Isbell duality?
  - 5. Motivate the proof of the Yoneda lemma as in Martin's comment here: https://mathoverflow.net/questions/130883/are-there-proofs-that-you-feel-you-did-not-understand-for-a-long-time#comment360113\_131050
  - 6. Add discussion of universal properties
  - 7. Add  $h_{g \circ f} = h_g \circ h_f$  to properties of representable natural transformations

12.1.1 Foundations

**Definition 12.1.1.1.4.** The **category of presheaves on** C is the category  $PSh(C)^{I}$  defined by

$$PSh(C) \stackrel{\text{def}}{=} Fun(C^{op}, Sets).$$

- **Remark 12.1.1.1.5.** In detail, the **category of presheaves on** C is the category PSh(C) where
  - Objects. The objects of PSh(C) are presheaves on C as in Definition 12.1.1.1.1.
  - *Morphisms*. The morphisms of PSh(C) are morphisms of presheaves as in Definition 12.1.1.1.3, i.e. we have

$$\operatorname{Hom}_{\mathsf{PSh}(C)}(\mathcal{F},\mathcal{G}) \stackrel{\text{def}}{=} \operatorname{Nat}(\mathcal{F},\mathcal{G})$$

for each  $\mathcal{F}$ ,  $\mathcal{G} \in \text{Obj}(\mathsf{PSh}(\mathcal{C}))$ .

• *Identities.* For each  $\mathcal{F} \in \text{Obj}(\mathsf{PSh}(C))$ , the unit map

$$\mathbb{1}^{\mathsf{PSh}(\mathcal{C})}_{\mathcal{F}} \colon \mathsf{pt} \to \mathsf{Nat}(\mathcal{F}, \mathcal{F})$$

of PSh(C) at  $\mathcal{F}$  is defined by

$$id_{\mathcal{F}}^{\mathsf{PSh}(C)} \stackrel{\text{def}}{=} id_{\mathcal{F}},$$

where  $id_{\mathcal{F}} \colon \mathcal{F} \Rightarrow \mathcal{F}$  is the identity natural transformation of Categories, Definition II.9.3.I.I.

• Composition. For each  $\mathcal{F},\mathcal{G},\mathcal{H}\in \mathrm{Obj}(\mathrm{PSh}(\mathcal{C})),$  the composition map

$$\circ^{\mathsf{PSh}(C)}_{\mathcal{F},G,\mathcal{H}} \colon \operatorname{Nat}(\mathcal{G},\mathcal{H}) \times \operatorname{Nat}(\mathcal{F},\mathcal{G}) \to \operatorname{Nat}(\mathcal{F},\mathcal{H})$$

of PSh(C) at  $(\mathcal{F}, \mathcal{G}, \mathcal{H})$  is defined by

$$\beta \circ_{\mathcal{F},G,\mathcal{H}}^{\mathsf{PSh}(C)} \alpha \stackrel{\text{def}}{=} \beta \circ \alpha,$$

where  $\beta \circ \alpha \colon \mathcal{F} \Rightarrow \mathcal{H}$  is the vertical composition of  $\alpha$  and  $\beta$  of Categories, Definition II.9.4.I.I.

<sup>&</sup>lt;sup>1</sup>Further Notation: Also written  $\widehat{C}$  in some parts of the literature.

## 02HB 12.1.2 Representable Presheaves

Let *C* be a category.

**O2HC** Definition 12.1.2.1.1. Let  $A \in Obj(C)$ .

02HD I. The representable presheaf associated to A is the presheaf

$$h_A \colon C^{\mathsf{op}} \to \mathsf{Sets}$$

where

• *Action on Objects.* For each  $X \in \text{Obj}(C)$ , we have

$$h_A(X) \stackrel{\text{def}}{=} \text{Hom}_C(X, A).$$

• *Action on Morphisms.* For each  $X, Y \in \mathrm{Obj}(C)$ , the action on morphisms

$$h_{A|X,Y}$$
:  $\operatorname{Hom}_{\mathcal{C}}(X,Y) \to \operatorname{Hom}_{\mathsf{Sets}}(h_A(Y),h_A(X))$ 

of  $h_A$  at (X, Y) is given by sending a morphism

$$f \colon X \to Y$$

of C to the map of sets

$$h_A(f): \underbrace{h_A(Y)}_{\stackrel{\text{def}}{=} \operatorname{Hom}_C(Y,A)} \to \underbrace{h_A(X)}_{\stackrel{\text{def}}{=} \operatorname{Hom}_C(X,A)}$$

defined by

$$b_A(f) \stackrel{\text{def}}{=} f^*$$
,

where  $f^*$  is the precomposition by f morphism of Categories, Item 1 of Definition 11.1.4.1.1.

02HE 2. A **representing object** for a presheaf  $\mathcal{F}: C^{\mathrm{op}} \to \mathsf{Sets}$  on C is an object A of C such that we have  $\mathcal{F} \cong h_A$ .

02HF 3. A presheaf  $\mathcal{F}: C^{\text{op}} \to \text{Sets on } C$  is **representable** if  $\mathcal{F}$  admits a representing object.

- **Example 12.1.2.1.2.** The representable presheaf on the delooping BA of a monoid A associated to the unique object  $\bullet$  of BA is the left regular representation of A of Monoid Actions, ??.
- **Proposition 12.1.2.1.3.** Let  $\mathcal{F}: C^{\text{op}} \to \text{Sets}$  be a presheaf. If there exist  $A, B \in \text{Obj}(C)$  such that we have natural isomorphisms

$$b_A \cong \mathcal{F},$$
  
 $b_B \cong \mathcal{F},$ 

then  $A \cong B$ .

*Proof.* By composing the isomorphisms  $h_A \cong \mathcal{F} \cong h_B$ , we get a natural isomorphism  $h_A \cong h_B$ . By Item 2 of Definition 12.1.4.1.3, we have  $A \cong B$ .

#### 02HJ 12.1.3 Representable Natural Transformations

Let C be a category, let  $A, B \in \text{Obj}(C)$ , and let  $f: A \to B$  be a morphism of C.

**Definition 12.1.3.1.1.** The representable natural transformation associated **to** *f* is the natural transformation

$$h_f \colon h_A \Rightarrow h_B$$

consisting of the collection

$$\left\{ b_{f|X} \colon \underbrace{b_{\mathcal{A}}(X)}_{\overset{\text{def.}}{=} \operatorname{Hom}_{\mathcal{C}}(X,\mathcal{A})} \to \underbrace{b_{\mathcal{B}}(X)}_{\overset{\text{def.}}{=} \operatorname{Hom}_{\mathcal{C}}(X,\mathcal{B})} \right\}_{X \in \operatorname{Obj}(\mathcal{C})}$$

with

$$b_{f|X} \stackrel{\text{def}}{=} f_*,$$

where  $f_*$  is the postcomposition by f morphism of Categories, Item 2 of Definition II.I.4.I.I.

#### 02HL 12.1.4 The Yoneda Embedding

**Definition 12.1.4.1.1.** The **Yoneda embedding of**  $C^2$  is the functor<sup>3</sup>

$$\sharp_C \colon C \to \mathsf{PSh}(C)$$

where

• *Action on Objects.* For each  $A \in \text{Obj}(C)$ , we have

$$\sharp_{\mathcal{C}}(A) \stackrel{\text{def}}{=} b_A.$$

• Action on Morphisms. For each  $A, B \in \text{Obj}(C)$ , the action on morphisms

$$\sharp_{C|A,B} \colon \operatorname{Hom}_{C}(A,B) \to \operatorname{Nat}(h_{A},h_{B})$$

of  $\downarrow_C$  at (A, B) is given by

$$\sharp_{C|A,B}(f) \stackrel{\text{def}}{=} h_f$$

for each  $f \in \text{Hom}_{\mathcal{C}}(A, B)$ , where  $b_f$  is the representable natural transformation associated to f of Definition 12.1.3.1.1.

02HN **Remark 12.1.4.1.2.** The notation よ for the Yoneda embedding was first introduced in [JS17]. The symbol よ is the hiragana for *yo*, and comes from "Yoneda" in Nobuo Yoneda (米田信夫).

It is pronounced *yo* but without letting the "o" in *yo* sound like an o-u diphthong:

- See here.
- IPA transcription: [jo].

**O2HP** Proposition 12.1.4.1.3. Let C be a category.

02HQ I. Fully Faithfulness. The Yoneda embedding

$$\sharp_{\mathcal{C}} \colon \mathcal{C} \to \mathsf{PSh}(\mathcal{C})$$

is fully faithful.

<sup>&</sup>lt;sup>2</sup> Further Terminology: Also called the **covariant Yoneda embedding** to distinguish it from the contravariant Yoneda embedding of Definition 12.2.5.1.1.

<sup>&</sup>lt;sup>3</sup>Further Notation: Also written  $h_{(-)}$ , or simply &.

**O2HR** 2. Preservation and Reflection of Isomorphisms. The Yoneda embedding

$$\sharp_C \colon C \to \mathsf{PSh}(C)$$

preserves and reflects isomorphisms, i.e. given  $A, B \in \text{Obj}(C)$ , the following conditions are equivalent:

**02HS** (a) We have  $A \cong B$ .

**02HT** (b) We have  $h_A \cong h_B$ .

**02HU** 3. *Density*. The Yoneda embedding

$$\sharp_C \colon C \to \mathsf{PSh}(C)$$

is dense.

**02HV** 4. Interaction With Density Comonads. We have

$$\operatorname{Lan}_{\mathcal{L}}(\mathcal{L}) \cong \operatorname{id}_{\operatorname{PSh}(C)}, \qquad \begin{array}{c|c} & & & \\ & \downarrow_{C} & & \\ & \downarrow_{\operatorname{Lan}_{\mathcal{L}}}(\mathcal{L}) \\ & & \downarrow_{C} \\ & & \downarrow_{C} \\ & & & \downarrow_{\operatorname{PSh}(C)}. \end{array}$$

**O2HW** 5. Interaction With Codensity Monads. We have

$$\operatorname{Ran}_{\mathcal{L}}(\mathcal{L}) \cong \operatorname{Spec} \circ O$$
,

where Spec and O are the functors of ??.

*Proof. Item 1*, *Fully Faithfulness*: Let  $A, B \in \text{Obj}(C)$ . Applying the Yoneda lemma (Definition 12.1.5.1.1) to the functor  $h_B$  (i.e. in the case  $\mathcal{F} = h_B$ ), we have

$$\operatorname{Hom}_{\mathcal{C}}(A, B) \cong \operatorname{Nat}(h_A, h_B),$$

and the natural isomorphism

$$\xi_{A,B} \colon h_B(A) \Rightarrow \operatorname{Nat}(h_A, h_B)$$

witnessing this bijection is given by

$$\xi_{A,B}(g)_X \stackrel{\text{def}}{=} h_g^X$$

$$\stackrel{\text{def}}{=} g_*$$

for each  $X \in \text{Obj}(C)$  and each  $g \in h_B^X$ , i.e. we have  $\xi_{A,B} = \sharp_{C|A,B}$ . Thus  $\sharp_C$  is fully faithful.

*Item 2, Preservation and Reflection of Isomorphisms*: This follows from Categories, Item 1 of Definition 11.5.1.1.6 and Item 3 of Definition 11.6.3.1.2.

Item 3, Density: Omitted.

Item 4, Interaction With Density Comonads: Omitted.

Item 5, Interaction With Codensity Monads: Omitted.

#### 02HX 12.1.5 The Yoneda Lemma

Let  $\mathcal{G}: C^{op} \to \mathsf{Sets}$  be a presheaf on C.

**O2HY** Theorem 12.1.5.1.1. We have a bijection

$$\operatorname{Nat}(h_A, \mathcal{F}) \cong \mathcal{F}(A),$$

natural in  $A \in \text{Obj}(C)$ , determining a natural isomorphism of functors

$$\operatorname{Nat}(h_{(-)}, \mathcal{F}) \cong \mathcal{F}.$$

*Proof.* The Transformation ev: Nat $(h_{(-)}, \mathcal{F}) \Rightarrow \mathcal{F}$ : Let

ev: Nat
$$(h_{(-)}, \mathcal{F}) \Rightarrow \mathcal{F}$$

be the transformation consisting of the collection

$$\{\operatorname{ev}_A\colon\operatorname{Nat}(h_A,\mathcal{F})\to\mathcal{F}(A)\}_{A\in\operatorname{Obj}(C)}$$

with

$$ev_A(\alpha) = \alpha_A(id_A)$$

for each  $\alpha \in \text{Nat}(h_A, \mathcal{F})$ , where  $\alpha_A$  is the component

$$\alpha_A \colon \operatorname{Hom}_{\mathcal{C}}(A, A) \to \mathcal{F}(A)$$

of  $\alpha$  at A.

The Transformation  $\xi \colon \mathcal{F} \Rightarrow \operatorname{Nat}(h_{(-)},\mathcal{F})$ : Let

$$\xi \colon \mathcal{F} \Rightarrow \operatorname{Nat}(h_{(-)}, \mathcal{F})$$

be the transformation consisting of the collection

$$\{\xi_A \colon \mathcal{F}(A) \to \operatorname{Nat}(b_A, \mathcal{F})\}_{A \in \operatorname{Obi}(C)}$$

where  $\xi_A$  is the map sending an element  $\phi \in \mathcal{F}(A)$  to the transformation

$$\xi_A(\phi) \colon h_A \Rightarrow \mathcal{F}$$

(which we will show is natural in a bit) consisting of the collection

$$\{\xi_A(\phi)_X \colon h_A(X) \to \mathcal{F}(X)\}_{X \in \mathrm{Obj}(C)}$$

with

$$\xi_A(\phi)_X(f) \stackrel{\text{def}}{=} [\mathcal{F}(f)](\phi)$$

for each  $f \in h_A(X)$ , where

$$\mathcal{F}(f) \colon \mathcal{F}(A) \to \mathcal{F}(X)$$

is the image of f by  $\mathcal{F}$ .

*Naturality of*  $\xi_A(\phi)$ :  $h_A \Rightarrow \mathcal{F}$ : The transformation

$$\xi_A(\phi) \colon h_A \Rightarrow \mathcal{F}$$

is indeed natural, as the diagram

$$b_{A}^{Y} \xrightarrow{f^{*}} b_{A}^{X}$$

$$\xi_{A}(\phi)_{Y} \downarrow \qquad \qquad \downarrow \xi_{A}(\phi)_{X}$$

$$\mathcal{F}(Y) \xrightarrow{\mathcal{F}(f)} \mathcal{F}(X)$$

commutes for each morphism  $f\colon X\to Y$  of C , acting on elements as

where we have

$$[\mathcal{F}(f)]([\mathcal{F}(h)](\phi)) = [\mathcal{F}(h \circ f)(\phi)]$$

by the functoriality of  $\mathcal{F}$ .

*Naturality of* ev: Nat $(h_{(-)}, \mathcal{F}) \Rightarrow \mathcal{F}$ : Let  $f: X \to Y$  be a morphism of C. We claim the naturality diagram

$$Nat(h_Y, \mathcal{F}) \xrightarrow{(h_f)^*} Nat(h_X, \mathcal{F}) \\
\downarrow^{ev_Y} \qquad \qquad \downarrow^{ev_X} \\
\mathcal{F}(Y) \xrightarrow{\mathcal{F}(f)} \mathcal{F}(X)$$

for ev at f, acting on elements as

$$\begin{array}{ccc}
\alpha & & \alpha \circ h_f \\
\downarrow & & \downarrow \\
\alpha_Y(\mathrm{id}_Y) & \longmapsto [\mathcal{F}(f)](\alpha_Y(\mathrm{id}_Y)) & & [\alpha \circ h_f]_X(\mathrm{id}_X),
\end{array}$$

commutes. Indeed:

• We have

$$[\alpha \circ h_f]_X(\mathrm{id}_X) \stackrel{\mathrm{def}}{=} [\alpha_X \circ h_{f|X}](\mathrm{id}_X)$$

$$\stackrel{\mathrm{def}}{=} [\alpha_X \circ f_*](\mathrm{id}_X)$$

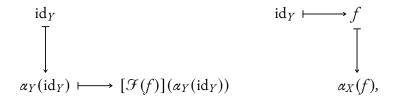

$$\stackrel{\mathrm{def}}{=} \alpha_X(f_*(\mathrm{id}_X))$$

$$\stackrel{\mathrm{def}}{=} \alpha_X(f).$$

Applying the naturality diagram

$$\begin{array}{ccc} b_Y^Y & \xrightarrow{f^*} & b_Y^X \\ & & \downarrow & & \downarrow \\ \alpha_Y & & \downarrow & \alpha_X \\ & \mathcal{F}(Y) & \xrightarrow{\mathcal{F}(f)} & \mathcal{F}(X) \end{array}$$

of  $\alpha: h_Y \Rightarrow \mathcal{F}$  at  $f: X \to Y$  to the element  $\mathrm{id}_Y$  of  $h_Y^Y$ , we have

showing that we have

$$[\mathcal{F}(f)](\alpha_Y(\mathrm{id}_Y)) = \alpha_X(f).$$

Thus the naturality diagram for ev at f commutes, and ev is natural. Naturality of  $\xi \colon \mathcal{F} \Rightarrow \operatorname{Nat}(h_{(-)}, \mathcal{F})$ : Let  $f \colon X \to Y$  be a morphism of C. We claim the naturality diagram

$$\begin{array}{ccc}
\mathcal{F}(Y) & \xrightarrow{\mathcal{F}(f)} & \mathcal{F}(X) \\
& & \downarrow & & \downarrow & \\
\xi_{Y} & & & \downarrow & \xi_{X} \\
\operatorname{Nat}(h_{Y}, \mathcal{F}) & \xrightarrow{(h_{f})^{*}} & \operatorname{Nat}(h_{X}, \mathcal{F})
\end{array}$$

for  $\xi$  at f, acting on elements as

$$\phi \qquad \phi \longmapsto [\mathcal{F}(f)](\phi)$$

$$\downarrow \qquad \qquad \qquad \downarrow$$

$$\xi_Y(\phi) \longmapsto \xi_Y(\phi) \circ h_f \qquad \xi_X([\mathcal{F}(f)](\phi))$$

commutes. Indeed, for each  $X \in \mathrm{Obj}(C)$  and each  $g \in \mathcal{V}_X^A$ , we have

$$\begin{aligned} [\xi_Y(\phi) \circ h_f]_X(g) &\stackrel{\text{def}}{=} [\xi_Y(\phi)_X \circ h_{f|X}](g) \\ &\stackrel{\text{def}}{=} [\xi_Y(\phi)_X \circ f_*](g) \\ &\stackrel{\text{def}}{=} \xi_Y(\phi)_X(f_*(g)) \\ &\stackrel{\text{def}}{=} \xi_Y(\phi)_X(f \circ g) \\ &\stackrel{\text{def}}{=} [\mathcal{F}(f \circ g)](\phi) \end{aligned}$$

and

$$\begin{aligned} [\xi_X([\mathcal{F}(f)](\phi))]_X(g) &\stackrel{\text{def}}{=} \mathcal{F}(g)([\mathcal{F}(f)](\phi)) \\ &= [\mathcal{F}(f \circ g)](\phi), \end{aligned}$$

where we have used the functoriality of  $\mathcal{F}$ . Thus  $\xi_Y(\phi) \circ h_f$  and  $\xi_X([\mathcal{F}(f)](\phi))$  are equal, and the naturality diagram for  $\xi$  at f above commutes, showing  $\xi$  to be natural.

*Invertibility I:* ev  $\circ \xi = id_{\mathcal{F}}$ : We claim that ev  $\circ \xi = id_{\mathcal{F}}$ , i.e. that we have

$$(\text{ev} \circ \xi)_A = \text{id}_{\mathcal{F}(A)}$$

for each  $A \in \text{Obj}(C)$ . Indeed, we have

$$[\operatorname{ev} \circ \xi]_{A}(\phi) \stackrel{\text{def}}{=} [\operatorname{ev}_{A} \circ \xi_{A}](\phi)$$

$$\stackrel{\text{def}}{=} \operatorname{ev}_{A}(\xi_{A}(\phi))$$

$$\stackrel{\text{def}}{=} \xi_{A}(\phi)_{A}(\operatorname{id}_{A})$$

$$\stackrel{\text{def}}{=} [\mathcal{F}(\operatorname{id}_{A})](\phi)$$

$$= [\operatorname{id}_{\mathcal{F}(A)}](\phi)$$

for each  $\phi \in \mathcal{F}(A)$ .

*Invertibility II:*  $\xi \circ \text{ev} = \text{id}_{\text{Nat}(h_{(-)},\mathcal{F})}$ : We claim that  $\xi \circ \text{ev} = \text{id}_{\text{Nat}(h_{(-)},\mathcal{F})}$ , i.e. that we have

$$(\xi \circ \text{ev})_A = \text{id}_{\text{Nat}(h_A,\mathcal{F})}$$

for each  $A \in \text{Obj}(C)$ . Indeed:

• We have

$$[\xi \circ \text{ev}]_A(\alpha) \stackrel{\text{def}}{=} [\xi_A \circ \text{ev}_A](\alpha)$$
$$\stackrel{\text{def}}{=} \xi_A(\text{ev}_A(\alpha))$$
$$\stackrel{\text{def}}{=} \xi_A(\alpha_A(\text{id}_A))$$

for each  $\alpha \in \text{Nat}(b_A, \mathcal{F})$ .

• For each  $X \in \text{Obj}(C)$ , we have

$$\xi_A(\alpha_A(\mathrm{id}_A))_X = \alpha_X,$$

since we have

$$\xi_{A}(\alpha_{A}(\mathrm{id}_{A}))_{X}(f) \stackrel{\mathrm{def}}{=} [\mathcal{F}(f)](\alpha_{A}(\mathrm{id}_{A}))$$
$$\stackrel{\scriptscriptstyle{(\dagger)}}{=} \alpha_{X}(f)$$

for each  $f \in b_A(X)$ , where the equality marked with (†) follows from the commutativity of the naturality diagram

$$\begin{array}{ccc}
h_A^A & \xrightarrow{f_*} & h_X^A \\
 & & \downarrow^{\alpha_X} \\
\mathcal{F}(A) & \xrightarrow{\mathcal{F}(f)} & \mathcal{F}(X)
\end{array}$$

of  $\alpha$  at  $f: A \to X$ , which acts on id<sub>A</sub> as

$$id_{A} \longmapsto f$$

$$\downarrow$$

$$\alpha_{A}(id_{A}) \longmapsto [\mathcal{F}(f)](\alpha_{A}(id_{A})) = \alpha_{X}(f).$$

This finishes the proof.

## 02HZ 12.1.6 Properties of Categories of Presheaves

**O2JO Proposition 12.1.6.1.1.** Let C be a category.

02J1 I. Functoriality. The assignment  $C \mapsto \mathsf{PSh}(C)$  defines a functor

$$PSh: Cats \rightarrow Cats$$

up to some set-theoretic considerations.4

- The Cats in the source of PSh could be small categories, and then the Cats in the right would be locally small categories.
- The Cats in the source of PSh could be locally small categories, and then the Cats on

<sup>&</sup>lt;sup>4</sup>For instance:

02J2 2. *Interaction With Slice Categories.* Let  $X \in \text{Obj}(C)$ . We have an equivalence of categories

$$\mathsf{PSh}(C_{/X}) \stackrel{\mathsf{eq.}}{\cong} \mathsf{PSh}(C)_{/b_X}.$$

02J3 3. Interaction With Categories of Elements. Let  $\mathcal{F} \in \mathrm{Obj}(\mathsf{PSh}(C))$ . We have an equivalence of categories

$$\mathsf{PSh}(\int_{\mathcal{C}} \mathcal{F}) \stackrel{\mathrm{eq.}}{\cong} \mathsf{PSh}(\mathcal{C})_{/\mathcal{F}}.$$

Proof. Item 1, Functoriality: Omitted.

Item 2, Interaction With Slice Categories: Omitted.

*Item 3, Interaction With Categories of Elements*: Omitted.

## 02J4 12.2 Copresheaves

#### 02J5 12.2.1 Foundations

Let *C* be a category.

- **O2J6 Definition 12.2.1.1.1.** A copresheaf on C is a functor  $F: C \to \mathsf{Sets}$ .
- **Example 12.2.1.1.2.** Copresheaves on the delooping BA of a monoid A are precisely the right A-sets; see Monoid Actions, ??.
- **Definition 12.2.1.1.3.** A morphism of copresheaves on C from F to G is a natural transformation  $\alpha: F \Rightarrow G$ .
- **Definition 12.2.1.1.4.** The category of copresheaves on C is the category CoPSh(C) defined by

$$CoPSh(C) \stackrel{\text{def}}{=} Fun(C, Sets).$$

**O2JA** Remark 12.2.1.1.5. In detail, the category of copresheaves on C is the category CoPSh(C) where

In general, one can systematise and formalise this using Grothendieck universes.

the right would be large categories.

- *Objects.* The objects of CoPSh(C) are copresheaves on C as in Definition 12.2.1.1.1.
- *Morphisms*. The morphisms of CoPSh(C) are morphisms of copresheaves as in Definition 12.2.1.1.3, i.e. we have

$$\operatorname{Hom}_{\mathsf{CoPSh}(C)}(F, G) \stackrel{\text{def}}{=} \operatorname{Nat}(F, G)$$

for each  $F, G \in \text{Obj}(\mathsf{CoPSh}(C))$ .

• *Identities.* For each  $F \in \text{Obj}(\mathsf{CoPSh}(C))$ , the unit map

$$\mathbb{1}_F^{\mathsf{CoPSh}(C)} \colon \mathsf{pt} \to \mathsf{Nat}(F,F)$$

of CoPSh(C) at F is defined by

$$id_F^{\mathsf{CoPSh}(C)} \stackrel{\text{def}}{=} id_F$$

where  $id_F: F \Rightarrow F$  is the identity natural transformation of Categories, Definition II.9.3.I.I.

• *Composition.* For each  $F, G, H \in Obj(CoPSh(C))$ , the composition map

$$\circ_{F,G,H}^{\mathsf{CoPSh}(C)} \colon \mathsf{Nat}(G,H) \times \mathsf{Nat}(F,G) \to \mathsf{Nat}(F,H)$$

of CoPSh(C) at (F, G, H) is defined by

$$\beta \circ_{FGH}^{\mathsf{CoPSh}(C)} \alpha \stackrel{\mathsf{def}}{=} \beta \circ \alpha,$$

where  $\beta \circ \alpha \colon F \Rightarrow H$  is the vertical composition of  $\alpha$  and  $\beta$  of Categories, Definition II.9.4.I.I.

### 02JB 12.2.2 Corepresentable Copresheaves

Let *C* be a category.

- **O2JC** Definition 12.2.2.1.1. Let  $A \in Obj(C)$ .
- 02JD I. The corepresentable copresheaf associated to A is the copresheaf

$$b^A \colon C \to \mathsf{Sets}$$

where

• *Action on Objects.* For each  $X \in \text{Obj}(C)$ , we have

$$b^A(X) \stackrel{\text{def}}{=} \text{Hom}_C(A, X).$$

• Action on Morphisms. For each  $X, Y \in \mathrm{Obj}(C)$ , the action on morphisms

$$b_{X,Y}^A \colon \operatorname{Hom}_{\mathcal{C}}(X,Y) \to \operatorname{Hom}_{\operatorname{Sets}}(b^A(X),b^A(Y))$$

of  $b^A$  at (X, Y) is given by sending a morphism

$$f: X \to Y$$

of *C* to the map of sets

$$b^A(f) \colon \underbrace{b^A(X)}_{\stackrel{\text{def}}{=} \operatorname{Hom}_C(A,X)} \to \underbrace{b^A(Y)}_{\stackrel{\text{def}}{=} \operatorname{Hom}_C(A,Y)}$$

defined by

$$b^A(f) \stackrel{\text{def}}{=} f_*,$$

where  $f_*$  is the postcomposition by f morphism of Categories, Item 2 of Definition II.I.4.I.I.

- 02JE 2. A **corepresenting object** for a copresheaf  $F: C \to \mathsf{Sets}$  on C is an object A of C such that we have  $F \cong b^A$ .
- 02JF 3. A copresheaf  $F \colon C^{\text{op}} \to \text{Sets on } C$  is **corepresentable** if F admits a corepresenting object.
- **Example 12.2.2.1.2.** The corepresentable copresheaf on the delooping BA of a monoid A associated to the unique object  $\bullet$  of BA is the right regular representation of A of Monoid Actions,  $\ref{A}$ ?
- **Proposition 12.2.2.1.3.** Let  $F: C \to \mathsf{Sets}$  be a copresheaf. If there exist  $A, B \in \mathsf{Obj}(C)$  such that we have natural isomorphisms

$$b^A \cong F$$
,

$$h^B \cong F$$
,

then  $A \cong B$ .

*Proof.* By composing the isomorphisms  $b^A \cong F \cong b^B$ , we get a natural isomorphism  $b^A \cong b^B$ . By Item 2 of Definition 12.2.4.1.2, we have  $A \cong B$ .

#### 02JJ 12.2.3 Corepresentable Natural Transformations

Let *C* be a category, let  $A, B \in \text{Obj}(C)$ , and let  $f: A \to B$  be a morphism of *C*.

02JK Definition 12.2.3.1.1. The corepresentable natural transformation associated to f is the natural transformation

$$b^f \cdot b^B \Rightarrow b^A$$

consisting of the collection

$$\left\{b_{X}^{f} \colon \underbrace{b^{B}(X)}_{\text{def}Hom_{C}(B,X)} \to \underbrace{b^{A}(X)}_{\text{def}Hom_{C}(A,X)}\right\}_{X \in Obj(C)}$$

with

$$b_X^f \stackrel{\text{def}}{=} f^*,$$

where  $f_*$  is the precomposition by f morphism of Categories, Item 1 of Definition 11.1.4.1.1.

## 02JL 12.2.4 The Contravariant Yoneda Embedding

**Definition 12.2.4.1.1.** The **contravariant Yoneda embedding of** C is the functor<sup>5</sup>

$$\mathcal{F}_C \colon C^{\mathsf{op}} \to \mathsf{CoPSh}(C)$$

where

• *Action on Objects.* For each  $A \in \text{Obj}(C)$ , we have

$$\Upsilon_C(A) \stackrel{\text{def}}{=} b^A$$
.

• Action on Morphisms. For each  $A, B \in \text{Obj}(C)$ , the action on morphisms

$$\Upsilon_{C|A,B} \colon \operatorname{Hom}_{C}(A,B) \to \operatorname{Nat}(b^{B},b^{A})$$

of  $\Upsilon_C$  at (A, B) is given by

$$\Upsilon_{C|A,B}(f) \stackrel{\text{def}}{=} h^f$$

for each  $f \in \text{Hom}_{\mathcal{C}}(A, B)$ , where  $b^f$  is the corepresentable natural transformation associated to f of Definition 12.2.3.1.1.

<sup>&</sup>lt;sup>5</sup>Further Notation: Also written  $h^{(-)}$ , or simply  $\mathfrak{P}$ .

- **O2JN** Proposition 12.2.4.1.2. Let C be a category.
- 02JP 1. Fully Faithfulness. The contravariant Yoneda embedding

$$\mathcal{F}_C \colon C^{\mathsf{op}} \to \mathsf{CoPSh}(C)$$

is fully faithful.

**O2JQ** 2. *Preservation and Reflection of Isomorphisms*. The contravariant Yoneda embedding

$$\mathcal{C}: C^{\mathsf{op}} \to \mathsf{CoPSh}(C)$$

preserves and reflects isomorphisms, i.e. given  $A, B \in \mathrm{Obj}(C)$ , the following conditions are equivalent:

- **02JR** (a) We have  $A \cong B$ .
- **02JS** (b) We have  $h^A \cong h^B$ .

*Proof. Item 1, Fully Faithfulness*: The proof is dual to that of Item 1 of Definition 12.1.4.1.3, and is therefore omitted.

Item 2, Preservation and Reflection of Isomorphisms: This follows from Categories, Item 1 of Definition 11.5.1.1.6 and Item 3 of Definition 11.6.3.1.2.

02JT 12.2.5 The Contravariant Yoneda Lemma

Let  $F \colon C \to \mathsf{Sets}$  be a copresheaf on C.

**O2JU** Theorem 12.2.5.1.1. We have a bijection

$$\operatorname{Nat}(b^A, F) \cong F(A),$$

natural in  $A \in \text{Obj}(C)$ , determining a natural isomorphism of functors

$$\operatorname{Nat}(h^{(-)}, F) \cong F.$$

*Proof.* The proof is dual to that of Definition 12.1.5.1.1, and is therefore omitted.

# **Restricted Yoneda Embeddings and Yoneda Extensions**

#### 02JW 12.3.1 Foundations

let  $F \colon C \to \mathcal{D}$  be a functor.

**Definition 12.3.1.1.1.** The **restricted Yoneda embedding associated to** *F* is the functor

$$\sharp_F \colon \mathcal{D} \to \mathsf{PSh}(C)$$

defined as the composition

$$\mathcal{D} \xrightarrow{\ \mathcal{L}_{\mathcal{D}}\ } \mathsf{PSh}(\mathcal{D}) \xrightarrow{F^{\mathsf{op},*}} \mathsf{PSh}(\mathcal{C}).$$

**Remark 12.3.1.1.2.** In detail, the **restricted Yoneda embedding associated to** *F* is the functor

$$\sharp_F \colon \mathcal{D} \to \mathsf{PSh}(C)$$

where

• *Action on Objects.* For each  $A \in \text{Obj}(\mathcal{D})$ , we have

$$\sharp_F(A) \stackrel{\text{def}}{=} h_A \circ F^{\text{op}} \\
\stackrel{\text{def}}{=} h_A^{F(-)}.$$

• Action on Morphisms. For each  $A, B \in \text{Obj}(\mathcal{D})$ , the action on morphisms

$$\label{eq:definition} \protect\ensuremath{\mathcal{L}}_{F|A,B}\colon\operatorname{Hom}_{\mathcal{D}}(A,B)\to\operatorname{Nat}(b_A^{F(-)},b_B^{F(-)})$$

of  $\downarrow_F$  at (A, B) is given by

$$\sharp_{F|A,B}(f) \stackrel{\text{def}}{=} h_f^{F(-)} \\
\stackrel{\text{def}}{=} h_f \star \mathrm{id}_{F^{\mathrm{op}}}$$

for each  $f \in \text{Hom}_{\mathcal{D}}(A, B)$ , where  $h_f$  is the representable natural transformation associated to f of Definition 12.1.3.1.1.

**O2JZ** Example 12.3.1.1.3. Here are some examples of restricted Yoneda embeddings.

02K0 I. *The Nerve Functor*. Let

$$\iota \colon \mathbb{A} \to \mathsf{Cats}$$

be the functor given by  $[n] \rightarrow \mathbb{n}$ . Then the restricted Yoneda embedding

$$\mbox{$\sharp$}_{\mbox{${}_{\ell}$: Cats}} \to \underbrace{\mbox{PSh}(\mbox{$\mathbb{\Delta}$})}_{\mbox{$\frac{def}{=}sSets}}$$

of  $\iota$  is given by the nerve functor N<sub>•</sub> of ??, ??.

02K1 2. The Singular Simplicial Set Associated to a Topological Space. Let

$$\iota \colon \mathbb{A} \to \mathbb{T}$$

be the functor given by  $[n] \rightarrow |\Delta^n|$ . Then the restricted Yoneda embedding

$$\sharp_{\iota} \colon \pi \to \underbrace{\mathsf{PSh}(\mathbb{A})}_{\stackrel{\text{def}}{=} \mathsf{sSets}}$$

of  $\iota$  is given by the singular simplicial set functor Sing. of ??, ??.

**02K2** 3. *The Coherent Nerve Functor*. Let

$$\iota \colon \mathbb{A} \to \mathsf{sCats}$$

be the functor given by  $[n] \to \mathsf{Path}(\Delta^n)$ , where  $\mathsf{Path}(\Delta^n)$  is the simplicial category of  $\ref{eq:partial}$ ??. Then the restricted Yoneda embedding

$$\mbox{$\sharp$}_{\it i}\colon {\sf sCats} \to \underbrace{{\sf PSh}({\mathbb A})}_{\stackrel{\rm def}{=} {\sf sSets}}$$

of  $\iota$  is given by the coherent nerve functor  $N^{hc}_{\bullet}$  of  $\ref{eq:local_property}$ ??.

**02K3** 4. *Kan's* Ex *Functor*. Let

$$sd: \mathbb{A} \rightarrow sSets$$

be the functor given by  $[n] \to \operatorname{Sd}(\Delta^n)$ , where  $\operatorname{Sd}(\Delta^n)$  is the barycentric subdivision of  $\Delta^n$  of  $\ref{eq:subdivision}$ . Then the restricted Yoneda embedding

$$\label{eq:sdef} \protect\ensuremath{\boldsymbol{\xi}}_{sd}\colon s\mathsf{Sets} \to \underbrace{\mathsf{PSh}(\mathbb{\Delta})}_{\substack{\underline{\mathsf{def}}, \mathsf{Sets}}}$$

of sd is given by Kan's Ex functor of ??.

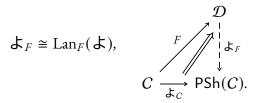

**O2K4** Proposition 12.3.1.1.4. let  $F: C \to \mathcal{D}$  be a functor.

02K5 1. Interaction With Fully Faithfulness. The following conditions are equivalent:

02K6 (a) The restricted Yoneda embedding  $\mathcal{L}_F$  is fully faithful.

02K7 (b) The functor F is dense (Limits and Colimits, ??).

2. As a Left Kan Extension. We have a natural isomorphism of functors

Proof. Item 1, Interaction With Fully Faithfulness: Omitted. Item 2, As a Left Kan Extension: Omitted.

#### 02K9 12.3.2 The Yoneda Extension Functor

Let  $F: \mathcal{C} \to \mathcal{D}$  be a functor with  $\mathcal{C}$  small and  $\mathcal{D}$  cocomplete.

**O2KA Definition 12.3.2.1.1.** The **Yoneda extension functor associated to** *F* is the left Kan extension

$$\operatorname{Lan}_{\sharp}(F) \colon \mathsf{PSh}(C) \to \mathcal{D}, \qquad \begin{array}{c} \mathsf{PSh}(C) \\ \downarrow_{\operatorname{Lan}_{\sharp}(F)} \\ C \xrightarrow{F} \mathcal{D}. \end{array}$$

- **Example 12.3.2.1.2.** Here are some examples of Yoneda extensions.
- **02KC** 1. The Homotopy Category Functor. Let

$$\iota \colon \mathbb{A} \to \mathsf{Cats}$$

be the functor given by  $[n] \rightarrow m$ . Then the Yoneda extension

$$\operatorname{Lan}_{\, \boldsymbol{\xi}} \left( \iota \right) \colon \underbrace{\operatorname{\mathsf{PSh}} ( \boldsymbol{\mathbb{\Delta}} )}_{\stackrel{\text{def}}{=} \mathsf{sSets}} \to \operatorname{\mathsf{Cats}}$$

of  $\iota$  is given by the homotopy category functor Ho of ??, ??.

**02KD** 2. The Geometric Realisation Functor. Let

$$\iota \colon \mathbb{A} \to \mathbb{T}$$

be the functor given by  $[n] \rightarrow |\Delta^n|$ . Then the Yoneda extension

$$\operatorname{Lan}_{\mathcal{L}}(\iota) \colon \underbrace{\operatorname{\mathsf{PSh}}(\mathbb{\Delta})}_{\overset{\operatorname{def}}{=} \mathsf{sSets}} \to \Pi$$

of  $\iota$  is given by the geometric realisation functor |-| of  $\ref{eq:local_state}$ ?.

**02KE** 3. *The Path Simplicial Category Functor.* Let

$$\iota \colon \mathbb{A} \to \mathsf{sCats}$$

be the functor given by  $[n] \to \mathsf{Path}(\Delta^n)$ , where  $\mathsf{Path}(\Delta^n)$  is the simplicial category of  $\ref{eq:partial}$ ??. Then the Yoneda extension

$$\operatorname{Lan}_{\mbox{$\sharp$}}(\iota) \colon \underbrace{\operatorname{\mathsf{PSh}}(\mathbb{\Delta})}_{\substack{\text{def} \\ = \mathsf{sSets}}} \to \mathsf{sCats}$$

of  $\iota$  is given by the path simplicial category functor Path of  $\ref{eq:local_path}$ ??.

**02KF** 4. The Barycentric Subdivision Functor. Let

$$sd: \mathbb{A} \rightarrow sSets$$

be the functor given by  $[n] \to \operatorname{Sd}(\Delta^n)$ , where  $\operatorname{Sd}(\Delta^n)$  is the barycentric subdivision of  $\Delta^n$  of  $\ref{eq:subdivision}$ . Then the Yoneda extension

$$\operatorname{Lan}_{\not \Leftarrow}(\operatorname{sd}) \colon \underbrace{\operatorname{\mathsf{PSh}}(\mathbb{\Delta})}_{\stackrel{\operatorname{def}}{=}\operatorname{\mathsf{SSets}}} \to \operatorname{\mathsf{sSets}}$$

of sd is given by the barycentric subdivision functor Sd of ??.

- **Proposition 12.3.2.1.3.** Let  $F \colon C \to \mathcal{D}$  be a functor with C small and  $\mathcal{D}$  cocomplete.
- 02KH 1. Functoriality. The assignment  $F \mapsto \text{Lan}_{\mathcal{L}}(F)$  defines a functor

$$\operatorname{Lan}_{\sharp} : \operatorname{Fun}(C, \mathcal{D}) \to \operatorname{Fun}(\operatorname{PSh}(C), \mathcal{D}).$$

02KJ 2. Adjointness. We have an adjunction<sup>6</sup>

$$(\operatorname{Lan}_{\mathcal{L}}(F) + \mathcal{L}_F)$$
:  $\operatorname{PSh}(C) \underbrace{\downarrow}_{\mathcal{L}_F} \mathcal{D}$ ,

witnessed by a bijection

$$\operatorname{Hom}_{\mathcal{D}}([\operatorname{Lan}_{\mathcal{L}}(F)](\mathcal{F}), D) \cong \operatorname{Nat}(\mathcal{F}, \mathcal{L}_F(D)),$$

natural in  $\mathcal{F} \in \text{Obj}(\mathsf{PSh}(\mathcal{C}))$  and  $D \in \text{Obj}(\mathcal{D})$ .

**O2KK** 3. *Interaction With the Yoneda Embedding.* We have a natural isomorphism of functors

$$\operatorname{Lan}_{\mathsf{L}}(F) \circ \mathsf{L}_{C} \cong F, \qquad \begin{array}{c|c} & & & & \\$$

**02KL** 4. As a Coend. We have

$$[\operatorname{Lan}_{\mathsf{L}}(F)](\mathcal{F}) \cong \int^{A \in C} \operatorname{Nat}(h_A, \mathcal{F}) \odot F(A)$$

$$\cong \int^{A \in C} \mathcal{F}(A) \odot F(A)$$

for each  $\mathcal{F} \in \mathsf{Obj}(\mathsf{PSh}(C))$ .

**O2KM** 5. *Interaction With Tensors of Presheaves With Functors.* We have a natural isomorphism

$$\operatorname{Lan}_{\mathcal{K}}(F) \cong (-) \odot_{\mathcal{C}} F$$

natural in  $F \in \text{Obj}(\text{Fun}(\mathcal{C}, \mathcal{D}))$ .

02KN 6. *Interaction With Finite Limits.* Let  $F: C \to Sets$  be a functor. The following conditions are equivalent:

<sup>&</sup>lt;sup>6</sup>Applying Item 2 of Definition 12.3.1.1.4, we see that this adjunction has the form Lan  $_{\sharp}(F)$   $\dashv$ 

- 02KP (a) The functor F preserves finite limits.
- 02KQ (b) The functor  $Lan_{k}(F)$  preserves finite limits.
- 02KR (c) The category of elements  $\int_C F$  of F is cofiltered.

*Proof. Item 1, Functoriality*: This follows from Kan Extensions, ?? of ??.

Item 2, Adjointness: Omitted.

*Item 3, Interaction With the Yoneda Embedding*: This follows from Kan Extensions, ?? of ??.

*Item 4, As a Coend*: This follows from Kan Extensions, ?? of ?? and Definition 12.1.5.1.1.

Item 5, Interaction With Tensors of Presheaves With Functors: This follows from Item 4.

Item 6, Interaction With Finite Limits: See [coend-calculus].

## **O2LR 12.4 Functor Tensor Products**

### 02LS 12.4.1 The Tensor Product of Presheaves With Copresheaves

Let C be a category, let  $\mathcal{G}: C^{\text{op}} \to \text{Sets}$  be a presheaf on C, and let  $G: C \to \text{Sets}$  be a copresheaf on C.

**Definition 12.4.1.1.1.** The **tensor product** of  $\mathcal{F}$  with G is the set  $\mathcal{F} \boxtimes_C G^7$  defined by

$$\mathcal{F} \boxtimes_{\mathcal{C}} G \stackrel{\mathrm{def}}{=} \int^{A \in \mathcal{C}} \mathcal{F}(A) \times G(A).$$

**Remark 12.4.1.1.2.** In other words, the tensor product of  $\mathcal{F}$  with G is the set  $\mathcal{F} \boxtimes_C G$  defined as the coend of the functor

$$C^{\mathsf{op}} \times C \xrightarrow{\mathcal{G} \times G} \mathsf{Sets} \times \mathsf{Sets} \xrightarrow{\mathsf{x}} \mathsf{Sets},$$

 $Lan_F(\mathcal{L})$ .

<sup>&</sup>lt;sup>7</sup> Further Notation: Also written simply  $\mathcal{F}$  ⋈ G.

which is equivalently the composition

$$C \xrightarrow{F} \mathsf{pt}$$

$$\times \circ (\mathcal{F} \times G) \cong \mathcal{F} \diamond F,$$

$$\times \circ (\mathcal{F} \times G) \times \mathcal{F}$$

$$C \xrightarrow{F} \mathsf{pt}$$

$$C \xrightarrow{F} \mathsf{pt}$$

$$C \xrightarrow{F} \mathsf{pt}$$

*Item 6, Interaction With Contravariant Yoneda Extensions*: This is a special case of ?? of ??. □

#### 02M3 12.4.2 The Tensor of a Presheaf With a Functor

Let C be a category, let  $\mathcal{D}$  be a category with coproducts, let  $\mathcal{F}: C^{op} \to \mathsf{Sets}$  be a presheaf on C, and let  $G: C \to \mathcal{D}$  be a functor.

**Definition 12.4.2.1.1.** The **tensor** of  $\mathcal{F}$  with G is the object  $\mathcal{F} \odot_C G^8$  of  $\mathcal{D}$  defined by

$$\mathcal{F} \odot_{\mathcal{C}} G \stackrel{\mathrm{def}}{=} \int^{A \in \mathcal{C}} \mathcal{F}(A) \odot G(A).$$

**Remark 12.4.2.1.2.** In other words, the tensor of  $\mathcal{F}$  with G is the object  $\mathcal{F} \odot_C G$  of  $\mathcal{D}$  defined as the coend of the functor

$$C^{\mathsf{op}} \times C \xrightarrow{\mathcal{I} \times G} \mathsf{Sets} \times \mathcal{D} \xrightarrow{\circ} \mathcal{D}.$$

- **O2M6** Proposition 12.4.2.1.3. Let C be a category.
- 02M7 I. Functoriality. The assignments  $\mathcal{F}$ , G,  $(\mathcal{F}, G) \mapsto \mathcal{F} \odot_C G$  define functors

$$\begin{array}{ll} \mathcal{F} \odot_{C} -\colon & \mathsf{PSh}(C) & \to \mathcal{D}, \\ -\odot_{C} G \colon & \mathsf{Fun}(C, \mathcal{D}) & \to \mathcal{D}, \\ -_{1} \odot_{C} -_{2} \colon \mathsf{PSh}(C) \times \mathsf{Fun}(C, \mathcal{D}) \to \mathcal{D}. \end{array}$$

2. Interaction With Corepresentable Copresheaves. We have an isomorphism

$$h_X \odot_C G \cong G(X),$$

natural in  $X \in \text{Obj}(C)$ , giving a natural isomorphism of functors

$$h_{(-)} \odot_C G \cong G.$$

<sup>&</sup>lt;sup>8</sup> *Further Notation:* Also written simply  $\mathcal{F} \odot G$ .

02M9 3. Interaction With Yoneda Extensions. We have a natural isomorphism

$$\operatorname{Lan}_{\mathcal{L}}(G) \cong (-) \odot_{\mathcal{C}} G$$

natural in  $G \in \text{Obj}(\text{Fun}(C, \mathcal{D}))$ .

Proof. Item 1, Functoriality: Omitted.

??, Interaction With Corepresentable Copresheaves: This follows from ??.

Item 3, Interaction With Yoneda Extensions: This is a repetition of Item 5 of
Definition 12.3.2.1.3, and is proved there.

## 02MA 12.4.3 The Tensor of a Copresheaf With a Functor

Let C be a category, let  $\mathcal{D}$  be a category with coproducts, let  $F \colon C \to \mathsf{Sets}$  be a copresheaf on C, and let  $G \colon C^\mathsf{op} \to \mathcal{D}$  be a functor.

**Definition 12.4.3.1.1.** The **tensor** of F with G is the set  $F \odot_C G^9$  defined by

$$F \odot_C G \stackrel{\text{def}}{=} \int^{A \in C} F(A) \odot G(A).$$

**Q2MC** Remark 12.4.3.1.2. In other words, the tensor of F with G is the object  $F \odot_C G$  of  $\mathcal{D}$  defined as the coend of the functor

$$C^{\mathsf{op}} \times C \xrightarrow{\sim} C \times C^{\mathsf{op}} \xrightarrow{F \times G} \mathsf{Sets} \times \mathcal{D} \xrightarrow{\odot} \mathcal{D}.$$

- **O2MD** Proposition 12.4.3.1.3. Let C be a category.
- 02ME 1. Functoriality. The assignments  $F, G, (F, G) \mapsto F \odot_C G$  define functors

$$\begin{array}{ll} F \odot_{\mathcal{C}} -\colon & \mathsf{CoPSh}(\mathcal{C}) & \to \mathcal{D}, \\ -\odot_{\mathcal{C}} \mathcal{G} \colon & \mathsf{Fun}(\mathcal{C}^{\mathsf{op}}, \mathcal{D}) & \to \mathcal{D}, \\ -_1 \odot_{\mathcal{C}} -_2 \colon \mathsf{Fun}(\mathcal{C}^{\mathsf{op}}, \mathcal{D}) \times \mathsf{CoPSh}(\mathcal{C}) \to \mathcal{D}. \end{array}$$

**O2MF** 2. Interaction With Corepresentable Copresheaves. We have an isomorphism

$$b^X \odot_C G \cong G(X),$$

natural in  $X \in \text{Obj}(C)$ , giving a natural isomorphism of functors

$$b^{(-)} \odot_C G \cong G$$
.

 $<sup>^9</sup>$  *Further Notation:* Also written simply F ⊙ G.

02MG

3. Interaction With Contravariant Yoneda Extensions. We have a natural isomorphism

$$\operatorname{Lan}_{\mathcal{L}}(G) \cong G \odot_{\mathcal{C}} (-),$$

natural in  $G \in \text{Obj}(\text{Fun}(C^{\text{op}}, \mathcal{D}))$ .

Proof. Item 1, Functoriality: Omitted.

- ??, Interaction With Representable Presheaves: This follows from ??.
- ??, Interaction With Corepresentable Copresheaves: This follows from ??.
- ??, Interaction With Yoneda Extensions: Omitted.

Item 3, Interaction With Contravariant Yoneda Extensions: Omitted.
