Constructions With Sets

The Clowder Project Authors

July 29, 2025

000J	This chapter develops some material relating to constructions with sets with an eye towards its categorical and higher-categorical counterparts to be introduced later in this work. Of particular interest are perhaps the following:
01YT	1. Explicit descriptions of the major types of co/limits in Sets, including in particular explicit descriptions of pushouts and coequalisers (see Definitions 4.2.4.1.1 and 4.2.5.1.1 and Remarks 4.2.4.1.4 and 4.2.5.1.4).
01YU	 A discussion of powersets as decategorifications of categories of presheaves, including in particular results such as:
01YV	(a) A discussion of the internal Hom of a powerset (Section 4.4.7).
01YW	(b) A o-categorical version of the Yoneda lemma (Presheaves and the Yoneda Lemma, Theorem 12.1.5.1.1), which we term the Yoneda lemma for sets (Proposition 4.5.5.1.1).
01YX	(c) A characterisation of powersets as free cocompletions (Section 4.4.5), mimicking the corresponding statement for categories of presheaves (??).
01YY	 (d) A characterisation of powersets as free completions (Section 4.4.6), mimicking the corresponding statement for categories of copresheaves (??).
01YZ	(e) A (-1) -categorical version of un/straightening (Item 2 of Proposition 4.5.1.1.4 and Remark 4.5.1.1.6).
01Z0	(f) A o-categorical form of Isbell duality internal to powersets (Section 4.4.8).

Contents

01Z1 3. A lengthy discussion of the adjoint triple

$$f_! \dashv f^{-1} \dashv f_* \colon \mathcal{P}(A) \xrightarrow{\rightleftarrows} \mathcal{P}(B)$$

of functors (i.e. morphisms of posets) between $\mathcal{P}(A)$ and $\mathcal{P}(B)$ induced by a map of sets $f: A \to B$, including in particular:

- 01Z2 (a) How f^{-1} can be described as a precomposition while $f_!$ and f_* can be described as Kan extensions (Remarks 4.6.1.1.4, 4.6.2.1.2 and 4.6.3.1.4).
- 01Z3 (b) An extensive list of the properties of $f_!$, f^{-1} , and f_* (Propositions 4.6.1.1.5, 4.6.1.1.7, 4.6.2.1.3, 4.6.2.1.5, 4.6.3.1.7 and 4.6.3.1.9).
- 01Z4 (c) How the functors f_1 , f^{-1} , f_* , along with the functors

$$-_{1} \cap -_{2} \colon \mathcal{P}(X) \times \mathcal{P}(X) \to \mathcal{P}(X),$$
$$[-_{1}, -_{2}]_{X} \colon \mathcal{P}(X)^{\mathsf{op}} \times \mathcal{P}(X) \to \mathcal{P}(X)$$

may be viewed as a six-functor formalism with the empty set \emptyset as the dualising object (Section 4.6.4).

000L	4.1.1 The Terminal Set
000M	DEFINITION 4.1.1.1.1 ► THE TERMINAL SET
	The terminal set is the terminal object of Sets as in Limits and Colimits, ??.
01DB	CONSTRUCTION 4.1.1.1.2 ► CONSTRUCTION OF THE TERMINAL SET
	Concretely, the terminal set is the pair (pt, $\{!_A\}_{A \in \text{Obj}(Sets)}$) consisting of:
01DC	1. The Limit. The punctual set pt $\stackrel{\mathrm{def}}{=} \{ \star \}$.
01DD	2. The Cone. The collection of maps
	$\{!_A \colon A \to pt\}_{A \in Obi(Sets)}$

PROOF 4.1.1.1.3 ► PROOF OF CONSTRUCTION 4.1.1.1.2

for each $a \in A$ and each $A \in Obj(Sets)$.

defined by

We claim that pt is the terminal object of Sets. Indeed, suppose we have a diagram of the form

 $!_A(a) \stackrel{\text{def}}{=} \star$

A pt

in Sets. Then there exists a unique map $\phi \colon A \to \operatorname{pt}$ making the diagram

$$A - \frac{\phi}{\exists !} \rightarrow pt$$

commute, namely $!_A$.

000N 4.1.2 Products of Families of Sets

Let $\{A_i\}_{i\in I}$ be a family of sets.

000P DEFINITION 4.1.2.1.1 ► THE PRODUCT OF A FAMILY OF SETS

The **product**¹ of $\{A_i\}_{i\in I}$ is the product of $\{A_i\}_{i\in I}$ in Sets as in Limits and Colimits, ??.

¹Further Terminology: Also called the **Cartesian product of** $\{A_i\}_{i\in I}$.

01DE CONSTRUCTION 4.1.2.1.2 ➤ CONSTRUCTION OF THE PRODUCT OF A FAMILY OF SETS

Concretely, the product of $\{A_i\}_{i\in I}$ is the pair $(\prod_{i\in I} A_i, \{\operatorname{pr}_i\}_{i\in I})$ consisting of:

01DF 1. The Limit. The set $\prod_{i \in I} A_i$ defined by

$$\prod_{i \in I} A_i \stackrel{\text{def}}{=} \left\{ f \in \operatorname{Sets} \left(I, \bigcup_{i \in I} A_i \right) \middle| \begin{array}{l} \text{for each } i \in I, \text{we} \\ \text{have } f(i) \in A_i \end{array} \right\}.$$

2. The Cone. The collection

01DG

$$\left\{\operatorname{pr}_i\colon \prod_{i\in I} A_i \to A_i\right\}_{i\in I}$$

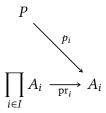

of maps given by

$$\operatorname{pr}_i(f) \stackrel{\text{def}}{=} f(i)$$

for each $f \in \prod_{i \in I} A_i$ and each $i \in I$.

PROOF 4.1.2.1.3 ► PROOF OF CONSTRUCTION 4.1.2.1.2

We claim that $\prod_{i \in I} A_i$ is the categorical product of $\{A_i\}_{i \in I}$ in Sets. Indeed, suppose we have, for each $i \in I$, a diagram of the form

in Sets. Then there exists a unique map $\phi\colon P\to \prod_{i\in I}A_i$ making the diagram

$$P$$

$$\phi \mid \exists ! \qquad p_i$$

$$\prod_{i \in I} A_i \xrightarrow{\operatorname{pr}_i} A_i$$

commute, being uniquely determined by the condition $\operatorname{pr}_i \circ \phi = p_i$ for each $i \in I$ via

$$\phi(x) = (p_i(x))_{i \in I}$$

for each $x \in P$.

01DJ

01DK

01DH REMARK 4.1.2.1.4 ► UNWINDING CONSTRUCTION 4.1.2.1.2

Less formally, we may think of Cartesian products and projection maps as follows:

- 1. We think of $\prod_{i \in I} A_i$ as the set whose elements are I-indexed collections $(a_i)_{i \in I}$ with $a_i \in A_i$ for each $i \in I$.
- 2. We view the projection maps

$$\left\{ \operatorname{pr}_i \colon \prod_{i \in I} A_i \to A_i \right\}_{i \in I}$$

as being given by

$$\operatorname{pr}_i((a_j)_{j\in I})\stackrel{\text{def}}{=} a_i$$

for each $(a_j)_{j\in I} \in \prod_{i\in I} A_i$ and each $i\in I$.

000Q PROPOSITION 4.1.2.1.5 ➤ PROPERTIES OF PRODUCTS OF FAMILIES OF SETS

Let $\{A_i\}_{i\in I}$ be a family of sets.

1. Functoriality. The assignment $\{A_i\}_{i\in I} \mapsto \prod_{i\in I} A_i$ defines a functor

$$\prod_{i \in I} : \mathsf{Fun}(I_{\mathsf{disc}}, \mathsf{Sets}) \to \mathsf{Sets}$$

where

000R

• Action on Objects. For each $(A_i)_{i \in I} \in \mathsf{Obj}(\mathsf{Fun}(I_{\mathsf{disc}},\mathsf{Sets})),$ we have

$$\left[\prod_{i\in I}\right]((A_i)_{i\in I})\stackrel{\text{def}}{=}\prod_{i\in I}A_i$$

• Action on Morphisms. For each $(A_i)_{i \in I}, (B_i)_{i \in I} \in Obj(Fun(I_{disc}, Sets))$, the action on Hom-sets

$$\left(\prod_{i\in I}\right)_{(A_i)_{i\in I},(B_i)_{i\in I}}: \operatorname{Nat}((A_i)_{i\in I},(B_i)_{i\in I}) \to \operatorname{Sets}\left(\prod_{i\in I}A_i,\prod_{i\in I}B_i\right)$$

of $\prod_{i\in I}$ at $((A_i)_{i\in I},(B_i)_{i\in I})$ is defined by sending a map

$$\{f_i\colon A_i\to B_i\}_{i\in I}$$

in Nat $((A_i)_{i \in I}, (B_i)_{i \in I})$ to the map of sets

$$\prod_{i\in I} f_i \colon \prod_{i\in I} A_i \to \prod_{i\in I} B_i$$

defined by

$$\left[\prod_{i\in I} f_i\right] ((a_i)_{i\in I}) \stackrel{\text{def}}{=} (f_i(a_i))_{i\in I}$$

for each $(a_i)_{i\in I}\in\prod_{i\in I}A_i$.

Item 1: Functoriality

This follows from Limits and Colimits, ?? of ??.

000S 4.1.3 Binary Products of Sets

Let A and B be sets.

ODES DEFINITION 4.1.3.1.1 ► BINARY PRODUCTS OF SETS

The **product of** A **and** B^1 is the product of A and B in Sets as in Limits and Colimits, ??.

¹Further Terminology: Also called the **Cartesian product of** A **and** B.

O1DL CONSTRUCTION 4.1.3.1.2 ► CONSTRUCTION OF BINARY PRODUCTS OF SETS

Concretely, the product of A and B is the pair $(A \times B, \{pr_1, pr_2\})$ consisting of:

01DM 1. *The Limit*. The set $A \times B$ defined by

$$A \times B \stackrel{\mathrm{def}}{=} \prod_{z \in \{A,B\}} z$$

$$\stackrel{\mathrm{def}}{=} \{ f \in \mathsf{Sets}(\{0,1\}, A \cup B) \mid \mathsf{we have } f(0) \in A \; \mathsf{and} \; f(1) \in B \}$$

$$\cong \{ \{ \{a\}, \{a,b\} \} \in \mathcal{P}(\mathcal{P}(A \cup B)) \mid \mathsf{we have} \; a \in A \; \mathsf{and} \; b \in B \}$$

$$\cong \begin{cases} \mathsf{ordered pairs} \; (a,b) \; \mathsf{with} \\ a \in A \; \mathsf{and} \; b \in B \end{cases}.$$

01DN 2. *The Cone*. The maps

$$\operatorname{pr}_1 : A \times B \to A,$$

 $\operatorname{pr}_2 : A \times B \to B$

defined by

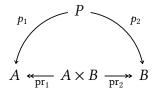

$$\operatorname{pr}_1(a,b) \stackrel{\text{def}}{=} a,$$

$$\operatorname{pr}_2(a,b) \stackrel{\text{def}}{=} b$$

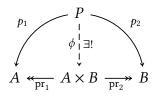

for each $(a, b) \in A \times B$.

PROOF 4.1.3.1.3 ► PROOF OF CONSTRUCTION 4.1.3.1.2

We claim that $A \times B$ is the categorical product of A and B in the category of sets. Indeed, suppose we have a diagram of the form

in Sets. Then there exists a unique map $\phi\colon P \to A\times B$ making the diagram

commute, being uniquely determined by the conditions

$$\operatorname{pr}_1 \circ \phi = p_1,$$

 $\operatorname{pr}_2 \circ \phi = p_2$

via

$$\phi(x) = (p_1(x), p_2(x))$$

for each $x \in P$.

000U PROPOSITION 4.1.3.1.4 ► PROPERTIES OF PRODUCTS OF SETS

Let A, B, C, and X be sets.

000V

1. Functoriality. The assignments $A, B, (A, B) \mapsto A \times B$ define functors

$$A \times -:$$
 Sets \rightarrow Sets,
 $- \times B:$ Sets \rightarrow Sets,
 $-_1 \times -_2:$ Sets \times Sets \rightarrow Sets,

where -1×-2 is the functor where

• *Action on Objects.* For each $(A, B) \in \mathsf{Obj}(\mathsf{Sets} \times \mathsf{Sets})$, we have

$$[-_1 \times -_2](A, B) \stackrel{\text{def}}{=} A \times B.$$

• *Action on Morphisms*. For each $(A, B), (X, Y) \in \mathsf{Obj}(\mathsf{Sets})$, the action on Hom-sets

$$\times_{(A,B),(X,Y)}$$
: Sets $(A,X) \times$ Sets $(B,Y) \rightarrow$ Sets $(A \times B, X \times Y)$

of \times at ((A, B), (X, Y)) is defined by sending (f, g) to the function

$$f \times g \colon A \times B \to X \times Y$$

defined by

$$[f \times g](a,b) \stackrel{\text{def}}{=} (f(a),g(b))$$

for each $(a, b) \in A \times B$.

and where $A \times -$ and $- \times B$ are the partial functors of $-_1 \times -_2$ at $A, B \in \text{Obj}(\mathsf{Sets})$.

000W

2. Adjointness I. We have adjunctions

$$(A \times - \exists \operatorname{Sets}(A, -))$$
: Sets $\underbrace{\bot}_{\operatorname{Sets}(A, -)}$ Sets, $\underbrace{-\times B}_{\operatorname{Sets}(B, -)}$ Sets, Sets, $\underbrace{\bot}_{\operatorname{Sets}(B, -)}$

witnessed by bijections

$$Sets(A \times B, C) \cong Sets(A, Sets(B, C)),$$

$$Sets(A \times B, C) \cong Sets(B, Sets(A, C)),$$

natural in $A, B, C \in Obj(Sets)$.

3. Adjointness II. We have an adjunction

$$(\Delta_{\mathsf{Sets}} \dashv -_1 \times -_2)$$
: Sets $\underbrace{\Delta_{\mathsf{Sets}}}_{-_1 \times -_2}$ Sets \times Sets,

witnessed by a bijection

$$\text{Hom}_{\text{Sets}\times\text{Sets}}((A, A), (B, C)) \cong \text{Sets}(A, B \times C),$$

natural in $A \in Obj(Sets)$ and in $(B, C) \in Obj(Sets \times Sets)$.

4. Associativity. We have an isomorphism of sets

$$\alpha_{ABC}^{\mathsf{Sets}} \colon (A \times B) \times C \xrightarrow{\sim} A \times (B \times C),$$

natural in $A, B, C \in Obj(Sets)$.

5. Unitality. We have isomorphisms of sets

$$\lambda_A^{\mathsf{Sets}} \colon \mathsf{pt} \times A \xrightarrow{\sim} A,$$

$$\rho_A^{\mathsf{Sets}} \colon A \times \mathsf{pt} \xrightarrow{\sim} A,$$

natural in $A \in Obj(Sets)$.

6. Commutativity. We have an isomorphism of sets

$$\sigma_{AB}^{\mathsf{Sets}} : A \times B \xrightarrow{\sim} B \times A,$$

natural in $A, B \in Obj(Sets)$.

01Z5

000X

000Y

000Z

01DP

7. Distributivity Over Coproducts. We have isomorphisms of sets

$$\begin{split} & \delta_{\ell}^{\mathsf{Sets}} \colon A \times (B \coprod C) \xrightarrow{\sim} (A \times B) \coprod (A \times C), \\ & \delta_{r}^{\mathsf{Sets}} \colon (A \coprod B) \times C \xrightarrow{\sim} (A \times C) \coprod (B \times C), \end{split}$$

natural in $A, B, C \in Obj(Sets)$.

0010

8. Annihilation With the Empty Set. We have isomorphisms of sets

$$\zeta_{\ell}^{\mathsf{Sets}} \colon \mathscr{O} \times A \xrightarrow{\sim} \mathscr{O},$$

 $\zeta_{r}^{\mathsf{Sets}} \colon A \times \mathscr{O} \xrightarrow{\sim} \mathscr{O},$

natural in $A \in Obj(Sets)$.

0011

9. Distributivity Over Unions. Let X be a set. For each $U,V,W\in\mathcal{P}(X)$, we have equalities

$$U \times (V \cup W) = (U \times V) \cup (U \times W),$$

$$(U \cup V) \times W = (U \times W) \cup (V \times W)$$

of subsets of $\mathcal{P}(X \times X)$.

0012

10. Distributivity Over Intersections. Let X be a set. For each $U, V, W \in \mathcal{P}(X)$, we have equalities

$$U \times (V \cap W) = (U \times V) \cap (U \times W),$$

$$(U \cap V) \times W = (U \times W) \cap (V \times W)$$

of subsets of $\mathcal{P}(X \times X)$.

0014

11. Distributivity Over Differences. Let X be a set. For each $U, V, W \in \mathcal{P}(X)$, we have equalities

$$U \times (V \setminus W) = (U \times V) \setminus (U \times W),$$

$$(U \setminus V) \times W = (U \times W) \setminus (V \times W)$$

of subsets of $\mathcal{P}(X \times X)$.

0015

12. Distributivity Over Symmetric Differences. Let X be a set. For each $U, V, W \in \mathcal{P}(X)$, we have equalities

$$U \times (V \triangle W) = (U \times V) \triangle (U \times W),$$

$$(U \triangle V) \times W = (U \times W) \triangle (V \times W)$$

of subsets of $\mathcal{P}(X \times X)$.

0013

13. Middle-Four Exchange with Respect to Intersections. The diagram

$$(\mathcal{P}(X) \times \mathcal{P}(X)) \times (\mathcal{P}(X) \times \mathcal{P}(X)) \xrightarrow{\cap \times \cap} \mathcal{P}(X) \times \mathcal{P}(X)$$

$$\downarrow^{\mathcal{P}_{X,X}^{\times}} \times \mathcal{P}_{X,X}^{\times} \downarrow \qquad \qquad \downarrow^{\mathcal{P}_{X,X}^{\times}}$$

$$\mathcal{P}(X \times X) \times \mathcal{P}(X \times X) \xrightarrow{\quad \cap \quad } \mathcal{P}(X \times X)$$

commutes, i.e. we have

$$(U \times V) \cap (W \times T) = (U \cap V) \times (W \cap T).$$

for each $U, V, W, T \in \mathcal{P}(X)$.

0016

14. Symmetric Monoidality. The 8-tuple (Sets, \times , pt, Sets(-1, -2), α^{Sets} , λ^{Sets} , ρ^{Sets} , σ^{Sets}) is a closed symmetric monoidal category.

0017

15. Symmetric Bimonoidality. The 18-tuple

$$\begin{split} & \Big(\mathsf{Sets}, \coprod, \times, \emptyset, \mathsf{pt}, \mathsf{Sets}(-_1, -_2), \alpha^{\mathsf{Sets}}, \lambda^{\mathsf{Sets}}, \rho^{\mathsf{Sets}}, \sigma^{\mathsf{Sets}}, \\ & \alpha^{\mathsf{Sets}, \coprod}, \lambda^{\mathsf{Sets}, \coprod}, \rho^{\mathsf{Sets}, \coprod}, \sigma^{\mathsf{Sets}, \coprod}, \delta^{\mathsf{Sets}}_{\ell}, \delta^{\mathsf{Sets}}_{r}, \zeta^{\mathsf{Sets}}_{\ell}, \zeta^{\mathsf{Sets}}_{r} \Big), \end{split}$$

is a symmetric closed bimonoidal category, where $\alpha^{\text{Sets},\coprod}$, $\lambda^{\text{Sets},\coprod}$, $\rho^{\text{Sets},\coprod}$, and $\sigma^{\text{Sets},\coprod}$ are the natural transformations from Items 3 to 5 of Proposition 4.2.3.1.4.

PROOF 4.1.3.1.5 ► PROOF OF PROPOSITION 4.1.3.1.4

Item 1: Functoriality

This follows from Limits and Colimits, ?? of ??.

Item 2: Adjointness

We prove only that there's an adjunction $- \times B \dashv \mathsf{Sets}(B, -)$, witnessed by a bijection

$$Sets(A \times B, C) \cong Sets(A, Sets(B, C)),$$

natural in $B, C \in \text{Obj}(\mathsf{Sets})$, as the proof of the existence of the adjunction $A \times - \exists \mathsf{Sets}(A, -)$ follows almost exactly in the same way.

Map I. We define a map

$$\Phi_{BC}$$
: Sets $(A \times B, C) \to \text{Sets}(A, \text{Sets}(B, C))$,

by sending a function

$$\xi: A \times B \to C$$

to the function

$$\xi^{\dagger} : A \longrightarrow \mathsf{Sets}(B, C),$$

 $a \mapsto (\xi_a^{\dagger} : B \to C),$

where we define

$$\xi_a^{\dagger}(b) \stackrel{\text{def}}{=} \xi(a,b)$$

for each $b \in B$. In terms of the $[a \mapsto f(a)]$ notation of Sets, Notation 3.1.1.1.2, we have

$$\xi^{\dagger} \stackrel{\text{\tiny def}}{=} \llbracket a \mapsto \llbracket b \mapsto \xi(a,b) \rrbracket \rrbracket.$$

01Z6

01Z7

• Map II. We define a map

$$\Psi_{B,C}$$
: Sets $(A, \text{Sets}(B, C)), \rightarrow \text{Sets}(A \times B, C)$

given by sending a function

$$\xi \colon A \longrightarrow \mathsf{Sets}(B,C),$$

 $a \mapsto (\xi_a \colon B \to C),$

to the function

$$\xi^{\dagger}: A \times B \to C$$

defined by

$$\xi^{\dagger}(a,b) \stackrel{\text{def}}{=} \operatorname{ev}_{b}(\operatorname{ev}_{a}(\xi))$$

$$\stackrel{\text{def}}{=} \operatorname{ev}_{b}(\xi_{a})$$

$$\stackrel{\text{def}}{=} \xi_{a}(b)$$

for each $(a, b) \in A \times B$.

01Z8

• Invertibility I. We claim that

$$\Psi_{A,B} \circ \Phi_{A,B} = \mathrm{id}_{\mathsf{Sets}(A \times B,C)}$$
.

Indeed, given a function $\xi: A \times B \to C$, we have

$$\begin{split} [\Psi_{A,B} \circ \Phi_{A,B}](\xi) &= \Psi_{A,B}(\Phi_{A,B}(\xi)) \\ &= \Psi_{A,B}(\Phi_{A,B}([\![(a,b) \mapsto \xi(a,b)]\!])) \\ &= \Psi_{A,B}([\![a \mapsto [\![b \mapsto \xi(a,b)]\!]]\!]) \\ &= \Psi_{A,B}([\![a' \mapsto [\![b' \mapsto \xi(a',b')]\!]]\!]) \\ &= [\![(a,b) \mapsto \operatorname{ev}_b(\operatorname{ev}_a([\![a' \mapsto [\![b' \mapsto \xi(a',b')]\!]]\!]))]\!] \\ &= [\![(a,b) \mapsto \operatorname{ev}_b([\![b' \mapsto \xi(a,b')]\!])]\!] \\ &= [\![(a,b) \mapsto \xi(a,b)]\!] \\ &= \xi. \end{split}$$

01Z9

• Invertibility II. We claim that

$$\Phi_{A,B} \circ \Psi_{A,B} = \mathrm{id}_{\mathsf{Sets}(A,\mathsf{Sets}(B,C))}$$
.

Indeed, given a function

$$\xi \colon A \longrightarrow \mathsf{Sets}(B,C),$$

 $a \mapsto (\xi_a \colon B \to C),$

we have

$$\begin{split} [\Phi_{A,B} \circ \Psi_{A,B}](\xi) &\stackrel{\text{def}}{=} \Phi_{A,B}(\Psi_{A,B}(\xi)) \\ &\stackrel{\text{def}}{=} \Phi_{A,B}(\llbracket(a,b) \mapsto \xi_a(b)\rrbracket) \\ &\stackrel{\text{def}}{=} \Phi_{A,B}(\llbracket(a',b') \mapsto \xi_{a'}(b')\rrbracket) \\ &\stackrel{\text{def}}{=} \llbracket a \mapsto \llbracket b \mapsto \operatorname{ev}_{(a,b)}(\llbracket(a',b') \mapsto \xi_{a'}(b')\rrbracket)\rrbracket\rrbracket \\ &\stackrel{\text{def}}{=} \llbracket a \mapsto \llbracket b \mapsto \xi_a(b)\rrbracket\rrbracket \\ &\stackrel{\text{def}}{=} \llbracket a \mapsto \xi_a\rrbracket \\ &\stackrel{\text{def}}{=} \xi. \end{split}$$

01ZA

• *Naturality for* Φ , *Part I.* We need to show that, given a function $g: B \to B'$, the diagram

$$\begin{aligned} \mathsf{Sets}(A \times B', C) & \xrightarrow{\Phi_{B',C}} & \mathsf{Sets}(A, \mathsf{Sets}(B', C)), \\ & \mathsf{id}_A \times g^* \bigg| & & & & & & & & \\ & & & & & & & & \\ & & & & & & & \\ & & & & & & & \\ & & & & & & & \\ & & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\$$

commutes. Indeed, given a function

$$\xi \colon A \times B' \to C$$

we have

$$[\Phi_{B,C}\circ(\mathrm{id}_A\times g^*)](\xi)=\Phi_{B,C}([\mathrm{id}_A\times g^*](\xi))$$

$$= \Phi_{B,C}(\xi(-_1, g(-_2)))$$

$$= [\xi(-_1, g(-_2))]^{\dagger}$$

$$= \xi_{-_1}^{\dagger}(g(-_2))$$

$$= (g^*)_!(\xi^{\dagger})$$

$$= (g^*)_!(\Phi_{B',C}(\xi))$$

$$= [(g^*)_! \circ \Phi_{B',C}](\xi).$$

Alternatively, using the $[a \mapsto f(a)]$ notation of Sets, Notation 3.1.1.1.2, we have

$$\begin{split} [\Phi_{B,C} \circ (\mathrm{id}_A \times g^*)](\xi) &= \Phi_{B,C}([\mathrm{id}_A \times g^*](\xi)) \\ &= \Phi_{B,C}([\mathrm{id}_A \times g^*]([(a,b') \mapsto \xi(a,b')])) \\ &= \Phi_{B,C}([(a,b) \mapsto \xi(a,g(b))]) \\ &= [(a \mapsto [(b \mapsto \xi(a,g(b))])]) \\ &= [(a \mapsto g^*([(b' \mapsto \xi(a,b')]))]) \\ &= (g^*)_!([(a \mapsto [(b' \mapsto \xi(a,b')])])) \\ &= (g^*)_!(\Phi_{B',C}([((a,b') \mapsto \xi(a,b')]))) \\ &= (g^*)_!(\Phi_{B',C}(\xi)) \\ &= [(g^*)_! \circ \Phi_{B',C}](\xi). \end{split}$$

• *Naturality for* Φ , *Part II.* We need to show that, given a function $h \colon C \to C'$, the diagram

$$\begin{split} \mathsf{Sets}(A \times B, C) & \xrightarrow{\Phi_{B,C}} & \mathsf{Sets}(A, \mathsf{Sets}(B, C)), \\ h_! & & \downarrow^{(h_!)_!} \\ \mathsf{Sets}(A \times B, C') & \xrightarrow{\Phi_{B,C'}} & \mathsf{Sets}(A, \mathsf{Sets}(B, C')) \end{split}$$

commutes. Indeed, given a function

$$\xi: A \times B \to C$$

01ZB

we have

$$\begin{split} [\Phi_{B,C} \circ h_{!}](\xi) &= \Phi_{B,C}(h_{!}(\xi)) \\ &= \Phi_{B,C}(h_{!}([[(a,b) \mapsto \xi(a,b)]])) \\ &= \Phi_{B,C}([[(a,b) \mapsto h(\xi(a,b))]]) \\ &= [[a \mapsto [[b \mapsto h(\xi(a,b))]]]] \\ &= [[a \mapsto h_{!}([[b \mapsto \xi(a,b)]]])) \\ &= (h_{!})_{!}([[a \mapsto [[b \mapsto \xi(a,b)]]])) \\ &= (h_{!})_{!}(\Phi_{B,C}([[(a,b) \mapsto \xi(a,b)]])) \\ &= (h_{!})_{!}(\Phi_{B,C}(\xi)) \\ &= [(h_{!})_{!} \circ \Phi_{B,C}](\xi). \end{split}$$

01ZC

• Naturality for Ψ . Since Φ is natural in each argument and Φ is a componentwise inverse to Ψ in each argument, it follows from Categories, Item 2 of Proposition 11.9.7.1.2 that Ψ is also natural in each argument.

This finishes the proof.

Item 3: Adjointness II

This follows from the universal property of the product.

Item 4: Associativity

This is proved in the proof of Monoidal Structures on the Category of Sets, Definition 5.1.4.1.1.

Item 5: Unitality

This is proved in the proof of Monoidal Structures on the Category of Sets, Definitions 5.1.5.1.1 and 5.1.6.1.1.

Item 6: Commutativity

This is proved in the proof of Monoidal Structures on the Category of Sets, Definition 5.1.7.1.1.

Item 7: Distributivity Over Coproducts

This is proved in the proof of Monoidal Structures on the Category of Sets, Definitions 5.3.1.1.1 and 5.3.2.1.1.

Item 8: Annihilation With the Empty Set

This is proved in the proof of Monoidal Structures on the Category of Sets, Definitions 5.3.3.1.1 and 5.3.4.1.1.

Item 9: Distributivity Over Unions

See [Pro25c].

Item 10: Distributivity Over Intersections

See [Pro25d, Corollary 1].

Item 11: Distributivity Over Differences

See [Pro25a].

Item 12: Distributivity Over Symmetric Differences

See [Pro25b].

Item 13: Middle-Four Exchange With Respect to Intersections

See [Pro25d, Corollary 1].

Item 14: Symmetric Monoidality

This is a repetition of Monoidal Structures on the Category of Sets, Proposition 5.1.9.1.1, and is proved there.

Item 15: Symmetric Bimonoidality

This is a repetition of Monoidal Structures on the Category of Sets, Proposition 5.3.5.1.1, and is proved there.

REMARK 4.1.3.1.6 \blacktriangleright The Cartesian Product of Sets as an $(\mathbb{E}_k, \mathbb{E}_\ell)$ -Tensor Product

As shown in Item 1 of Proposition 4.1.3.1.4, the Cartesian product of sets defines a functor

$$-1 \times -2$$
: Sets \times Sets \rightarrow Sets.

This functor is the $(k, \ell) = (-1, -1)$ case of a family of functors

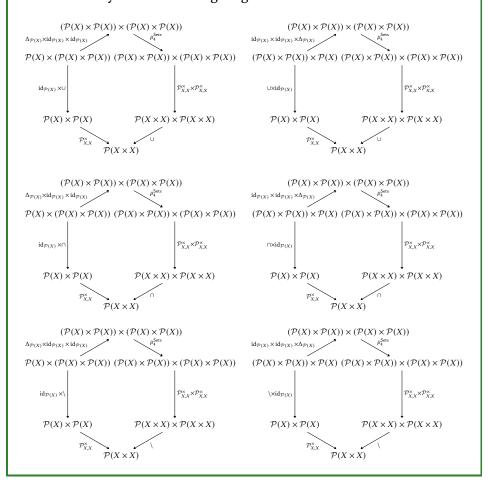

$$\otimes_{k,\ell} \colon \mathsf{Mon}_{\mathbb{E}_k}(\mathsf{Sets}) \times \mathsf{Mon}_{\mathbb{E}_\ell}(\mathsf{Sets}) \to \mathsf{Mon}_{\mathbb{E}_{k+\ell}}(\mathsf{Sets})$$

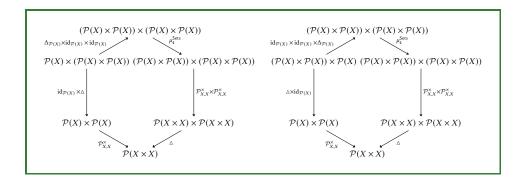

01DR

of tensor products of \mathbb{E}_k -monoid objects on Sets with \mathbb{E}_ℓ -monoid objects on Sets; see **??**.

01DS REMARK 4.1.3.1.7 ➤ DIAGRAMS FOR ITEMS 9 TO 12 OF PROPOSITION 4.1.3.1.4

We may state the equalities in Items 9 to 12 of Proposition 4.1.3.1.4 as the commutativity of the following diagrams:

0018 4.1.4 Pullbacks

Let A, B, and C be sets and let $f: A \to C$ and $g: B \to C$ be functions.

0019 DEFINITION 4.1.4.1.1 ▶ PULLBACKS OF SETS

The **pullback of** A **and** B **over** C **along** f **and** g^1 is the pullback of A and B over C along f and g in Sets as in Limits and Colimits, ??.

¹Further Terminology: Also called the **fibre product of** A **and** B **over** C **along** f **and** g.

01DT CONSTRUCTION 4.1.4.1.2 ► CONSTRUCTION OF PULLBACKS OF SETS

Concretely, the pullback of A and B over C along f and g is the pair $(A \times_C B, \{\operatorname{pr}_1, \operatorname{pr}_2\})$ consisting of:

01DU 1. *The Limit*. The set $A \times_C B$ defined by

$$A \times_C B \stackrel{\text{def}}{=} \{(a, b) \in A \times B \mid f(a) = g(b)\}.$$

01DV 2. The Cone. The maps¹

$$\operatorname{pr}_1: A \times_C B \to A,$$

 $\operatorname{pr}_2: A \times_C B \to B$

defined by

$$\operatorname{pr}_1(a,b) \stackrel{\text{def}}{=} a,$$

$$\operatorname{pr}_2(a,b) \stackrel{\text{def}}{=} b$$

for each $(a, b) \in A \times_C B$.

¹Further Notation: Also written $\operatorname{pr}_{1}^{A \times_{C} B}$ and $\operatorname{pr}_{2}^{A \times_{C} B}$.

PROOF 4.1.4.1.3 ► PROOF OF CONSTRUCTION 4.1.4.1.2

We claim that $A \times_C B$ is the categorical pullback of A and B over C with respect to (f,g) in Sets. First we need to check that the relevant pullback diagram commutes, i.e. that we have

$$f \circ \operatorname{pr}_1 = g \circ \operatorname{pr}_2, \qquad A \times_C B \xrightarrow{\operatorname{pr}_2} B$$

$$\downarrow g$$

$$A \xrightarrow{f} C.$$

Indeed, given $(a, b) \in A \times_C B$, we have

$$[f \circ pr_1](a, b) = f(pr_1(a, b))$$

$$= f(a)$$

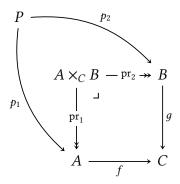

$$= g(b)$$

$$= g(pr_2(a, b))$$

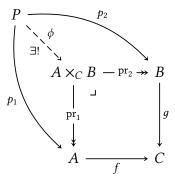

$$= [g \circ pr_2](a, b),$$

where f(a) = g(b) since $(a, b) \in A \times_C B$. Next, we prove that $A \times_C B$ satisfies the universal property of the pullback. Suppose we have a

diagram of the form

in Sets. Then there exists a unique map $\phi\colon P\to A\times_C B$ making the diagram

commute, being uniquely determined by the conditions

$$\operatorname{pr}_1 \circ \phi = p_1,$$

 $\operatorname{pr}_2 \circ \phi = p_2$

via

$$\phi(x) = (p_1(x), p_2(x))$$

for each $x \in P$, where we note that $(p_1(x), p_2(x)) \in A \times B$ indeed lies in $A \times_C B$ by the condition

$$f\circ p_1=g\circ p_2,$$

which gives

$$f(p_1(x)) = g(p_2(x))$$

for each $x \in P$, so that $(p_1(x), p_2(x)) \in A \times_C B$.

01DW

REMARK 4.1.4.1.4 ▶ PULLBACKS OF SETS DEPEND ON THE MAPS

It is common practice to write $A \times_C B$ for the pullback of A and B over C along f and g, omitting the maps f and g from the notation and instead leaving them implicit, to be understood from the context.

However, the set $A \times_C B$ depends very much on the maps f and g, and sometimes it is necessary or useful to note this dependence explicitly. In such situations, we will write $A \times_{f,C,g} B$ or $A \times_C^{f,g} B$ for $A \times_C B$.

001A

EXAMPLE 4.1.4.1.5 ► **EXAMPLES OF PULLBACKS OF SETS**

Here are some examples of pullbacks of sets.

001B

1. *Unions via Intersections*. Let X be a set. We have

$$A \cap B \cong A \times_{A \cup B} B,$$

$$A \cap B \cong A \times_{A \cup B} B,$$

$$A \hookrightarrow A \cup B$$

for each $A, B \in \mathcal{P}(X)$.

PROOF 4.1.4.1.6 ► PROOF OF EXAMPLE 4.1.4.1.5

Item 1: Unions via Intersections

Indeed, we have

$$A \times_{A \cup B} B \cong \{(x, y) \in A \times B \mid x = y\}$$

 $\cong A \cap B.$

This finishes the proof.

001C PROPOSITION 4.1.4.1.7 ▶ PROPERTIES OF PULLBACKS OF SETS

Let A, B, C, and X be sets.

001D

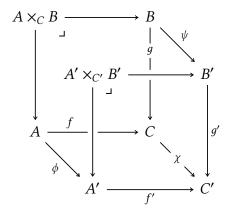

1. Functoriality. The assignment $(A, B, C, f, g) \mapsto A \times_{f,C,g} B$ defines a functor

$$-_1 \times_{-_3} -_1$$
: Fun(\mathcal{P} , Sets) \rightarrow Sets,

where \mathcal{P} is the category that looks like this:

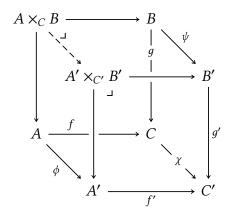

In particular, the action on morphisms of $-1 \times_{-3} -1$ is given by sending a morphism

in Fun(\mathcal{P} , Sets) to the map $\xi \colon A \times_C B \xrightarrow{\exists !} A' \times_{C'} B'$ given by

$$\xi(a,b) \stackrel{\text{def}}{=} (\phi(a), \psi(b))$$

for each $(a, b) \in A \times_C B$, which is the unique map making the diagram

commute.

2. Adjointness I. We have adjunctions

$$(A \times_X - + \mathbf{Sets}_{/X}(A, -)) : \operatorname{Sets}_{/X} \underbrace{\overset{A \times_X -}{\bot}}_{\mathbf{Sets}_{/X}(A, -)} \operatorname{Sets}_{/X},$$

$$(- \times_X B + \mathbf{Sets}_{/X}(B, -)) : \operatorname{Sets}_{/X} \underbrace{\overset{- \times_X B}{\bot}}_{\mathbf{Sets}_{/X}(B, -)} \operatorname{Sets}_{/X},$$

witnessed by bijections

$$\mathsf{Sets}_{/X}(A \times_X B, C) \cong \mathsf{Sets}_{/X}(A, \mathbf{Sets}_{/X}(B, C)),$$

 $\mathsf{Sets}_{/X}(A \times_X B, C) \cong \mathsf{Sets}_{/X}(B, \mathbf{Sets}_{/X}(A, C)),$

natural in (A, ϕ_A) , (B, ϕ_B) , $(C, \phi_C) \in \text{Obj}(\mathsf{Sets}_{/X})$, where $\mathsf{Sets}_{/X}(A, B)$ is the object of $\mathsf{Sets}_{/X}$ consisting of (see Fibred Sets, ??):

• *The Set.* The set $\mathbf{Sets}_{/X}(A, B)$ defined by

$$\mathbf{Sets}_{/X}(A,B) \stackrel{\mathrm{def}}{=} \coprod_{x \in X} \mathsf{Sets}(\phi_A^{-1}(x), \phi_Y^{-1}(x))$$

01DX

• The Map to X. The map

$$\phi_{\mathsf{Sets}_{/X}(A,B)} \colon \mathsf{Sets}_{/X}(A,B) \to X$$

defined by

$$\phi_{\mathsf{Sets}_{/X}(A,B)}(x,f) \stackrel{\mathrm{def}}{=} x$$

for each
$$(x, f) \in \mathbf{Sets}_{/X}(A, B)$$
.

3. Adjointness II. We have an adjunction

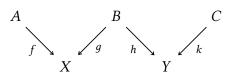

$$\left(\Delta_{\mathsf{Sets}_{/X}}\dashv -_1 \times -_2\right)$$
: $\mathsf{Sets}_{/X} \underbrace{\overset{\Delta_{\mathsf{Sets}_{/X}}}{\bot}}_{-_1 \times -_2} \mathsf{Sets}_{/X} \times \mathsf{Sets}_{/X}$,

witnessed by a bijection

$$\mathsf{Hom}_{\mathsf{Sets}_{/X} \times \mathsf{Sets}_{/X}}((A,A),(B,C)) \cong \mathsf{Sets}_{/X}(A,B \times_X C),$$

natural in $A \in \text{Obj}(\mathsf{Sets}_{/X})$ and in $(B, C) \in \text{Obj}(\mathsf{Sets}_{/X} \times \mathsf{Sets}_{/X})$.

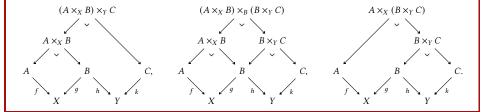

4. Associativity. Given a diagram

in Sets, we have isomorphisms of sets

$$(A \times_X B) \times_Y C \cong (A \times_X B) \times_B (B \times_Y C) \cong A \times_X (B \times_Y C),$$

where these pullbacks are built as in the diagrams

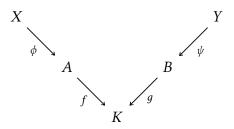

01ZD

001E

01DY

5. Interaction With Composition. Given a diagram

in Sets, we have isomorphisms of sets

$$\begin{split} X \times_K^{f \circ \phi, g \circ \psi} Y &\cong (X \times_A^{\phi, q_1} (A \times_K^{f, g} B)) \times_{A \times_K^{f, g} B}^{p_2, p_1} ((A \times_K^{f, g} B) \times_B^{q_2, \psi} Y) \\ &\cong X \times_A^{\phi, p} ((A \times_K^{f, g} B) \times_B^{q_2, \psi} Y) \\ &\cong (X \times_A^{\phi, q_1} (A \times_K^{f, g} B)) \times_B^{q, \psi} Y \end{split}$$

where

$$q_{1} = \operatorname{pr}_{1}^{A \times_{K}^{f,g} B}, \qquad q_{2} = \operatorname{pr}_{2}^{A \times_{K}^{f,g} B},$$

$$p_{1} = \operatorname{pr}_{1}^{(A \times_{K}^{f,g} B) \times_{Y}^{q_{2}, \psi}}, \qquad X^{\chi_{A \times_{K}^{f,g} B}} (A \times_{K}^{f,g} B),$$

$$p_{2} = \operatorname{pr}_{2}^{\chi_{A \times_{K}^{f,g} B}},$$

$$p_{3} = \operatorname{pr}_{2}^{\chi_{A \times_{K}^{f,g} B}},$$

$$p_{4} = \operatorname{pr}_{2}^{\chi_{A \times_{K}^{f,g} B}},$$

$$p_{5} = \operatorname{pr}_{2}^{\chi_{5}^{\chi_{5}^{f,g} B}},$$

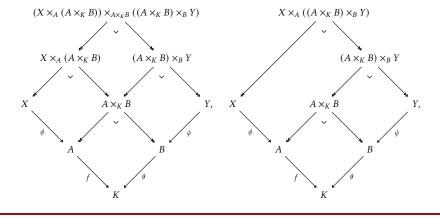

$$q_{7} = \operatorname{pr}_{2}^{\chi_{5}^{\chi_{5}^{f,g} B}},$$

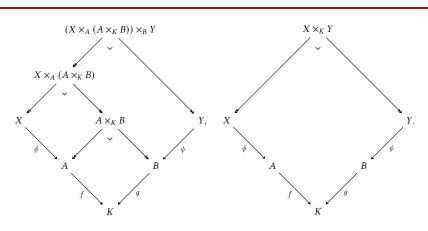

$$q_{7} = \operatorname{pr}_{2}^{\chi_{5}^{\chi_{5}^{f,g} B}},$$

$$q_{8} = \operatorname{pr}_{2}^{\chi_{5}^{\chi_{5}^{f,g} B}},$$

$$q_{8} = \operatorname{pr}_{2}^{\chi_{5}^{\chi_{5}^{f,g} B}},$$

and where these pullbacks are built as in the following diagrams:

6. *Unitality*. We have isomorphisms of sets

natural in $(A, f) \in Obj(Sets_{/X})$.

7. Commutativity. We have an isomorphism of sets

natural in (A, f), $(B, g) \in Obj(Sets_{/X})$.

8. Distributivity Over Coproducts. Let A, B, and C be sets and let $\phi_A \colon A \to X$, $\phi_B \colon B \to X$, and $\phi_C \colon C \to X$ be morphisms of sets. We have isomorphisms of sets

$$\delta_{\ell}^{\mathsf{Sets}_{/X}} : A \times_X (B \coprod C) \xrightarrow{\sim} (A \times_X B) \coprod (A \times_X C),$$

001H

001J

$$\delta_r^{\mathsf{Sets}_{/X}} : (A \coprod B) \times_X C \xrightarrow{\sim} (A \times_X C) \coprod (B \times_X C),$$

as in the diagrams

natural in $A, B, C \in Obj(Sets_{/X})$.

9. Annihilation With the Empty Set. We have isomorphisms of sets

$$\emptyset \longrightarrow \emptyset \qquad \qquad \emptyset \longrightarrow A$$

$$\downarrow \qquad \qquad \downarrow \qquad \qquad \zeta_{\ell}^{\mathsf{Sets}/X} : A \times_{X} \emptyset \xrightarrow{\sim} \emptyset, \qquad \qquad \downarrow \qquad \downarrow f$$

$$A \xrightarrow{f} X, \qquad \qquad \emptyset \longrightarrow X,$$

natural in $(A, f) \in \text{Obj}(\mathsf{Sets}_{/X})$.

10. Interaction With Products. We have an isomorphism of sets

$$A \times_{\text{pt}} B \cong A \times B, \qquad A \times_{\text{pt}} B \cong A \times B, \qquad A \xrightarrow{!_{A}} \text{pt.}$$

001K

11. Symmetric Monoidality. The 8-tuple (Sets_{/X}, \times_X , X, Sets_{/X}, $\alpha^{\text{Sets}/X}$, $\lambda^{\text{Sets}/X}$, $\rho^{\text{Sets}/X}$, $\sigma^{\text{Sets}/X}$) is a symmetric closed monoidal category.

PROOF 4.1.4.1.8 ► PROOF OF PROPOSITION 4.1.4.1.7

Item 1: Functoriality

This is a special case of functoriality of co/limits, Limits and Colimits, ?? of ??, with the explicit expression for ξ following from the commutativity of the cube pullback diagram.

Item 2: Adjointness I

This is a repetition of Fibred Sets, ?? of ??, and is proved there.

Item 3: Adjointness II

This follows from the universal property of the product (pullbacks are products in $\mathsf{Sets}_{/X}$).

Item 4: Associativity

We have

$$(A \times_X B) \times_Y C \cong \{((a,b),c) \in (A \times_X B) \times C \mid h(b) = k(c)\}$$

$$\cong \{((a,b),c) \in (A \times B) \times C \mid f(a) = g(b) \text{ and } h(b) = k(c)\}$$

$$\cong \{(a,(b,c)) \in A \times (B \times C) \mid f(a) = g(b) \text{ and } h(b) = k(c)\}$$

$$\cong \{(a,(b,c)) \in A \times (B \times_Y C) \mid f(a) = g(b)\}$$

$$\cong A \times_X (B \times_Y C)$$

and

$$(A \times_X B) \times_B (B \times_Y C) \cong \left\{ ((a,b),(b',c)) \in (A \times_X B) \times (B \times_Y C) \mid b = b' \right\}$$

$$\cong \left\{ ((a,b),(b',c)) \in (A \times B) \times (B \times C) \mid f(a) = g(b), b = b', \text{and } h(b') = k(c) \right\}$$

$$\cong \left\{ (a,(b,(b',c))) \in A \times (B \times (B \times C)) \mid f(a) = g(b), b = b', \text{and } h(b') = k(c) \right\}$$

$$\cong \left\{ (a,((b,b'),c)) \in A \times ((B \times B) \times C) \mid f(a) = g(b), b = b', \text{and } h(b') = k(c) \right\}$$

$$\cong \left\{ (a,((b,b'),c)) \in A \times ((B \times_B B) \times C) \mid f(a) = g(b) \text{ and } h(b') = k(c) \right\}$$

$$\cong \left\{ (a,(b,c)) \in A \times (B \times C) \mid f(a) = g(b) \text{ and } h(b') = k(c) \right\}$$

$$\cong \left\{ (a,(b,c)) \in A \times (B \times C) \mid f(a) = g(b) \text{ and } h(b) = k(c) \right\}$$

$$\cong A \times_X (B \times_Y C),$$

where we have used Item 6 for the isomorphism $B \times_B B \cong B$.

Item 5: Interaction With Composition

By Item 4, it suffices to construct only the isomorphism

$$X\times_K^{f\circ\phi,g\circ\psi}Y\cong (X\times_A^{\phi,q_1}(A\times_K^{f,g}B))\times_{A\times_K^{f,g}B}^{p_2,p_1}((A\times_K^{f,g}B)\times_B^{q_2,\psi}Y).$$

We have

$$(X \times_A^{\phi, q_1} (A \times_K^{f, g} B)) \stackrel{\text{def}}{=} \left\{ (x, (a, b)) \in X \times (A \times_K^{f, g} B) \middle| \phi(x) = q_1(a, b) \right\}$$

$$\stackrel{\text{def}}{=} \left\{ (x, (a, b)) \in X \times (A \times_K^{f, g} B) \middle| \phi(x) = a \right\}$$

$$\cong \left\{ (x, (a, b)) \in X \times (A \times B) \middle| \phi(x) = a \text{ and } f(a) = g(b) \right\},$$

$$((A \times_K^{f, g} B) \times_B^{q_2, \psi} Y) \stackrel{\text{def}}{=} \left\{ ((a, b), y) \in (A \times_K^{f, g} B) \times Y \middle| q_2(a, b) = \psi(y) \right\}$$

$$\stackrel{\text{def}}{=} \left\{ ((a, b), y) \in (A \times_K^{f, g} B) \times Y \middle| b = \psi(y) \text{ and } f(a) = g(b) \right\},$$

$$\cong \left\{ ((a, b), y) \in (A \times B) \times Y \middle| b = \psi(y) \text{ and } f(a) = g(b) \right\},$$

so writing

$$S = (X \times_A^{\phi, q_1} (A \times_K^{f, g} B))$$

$$S' = ((A \times_K^{f, g} B) \times_B^{q_2, \psi} Y),$$

we have

$$\begin{split} S \times_{A \times_{K}^{f,g} B}^{p_{2},p_{1}} S' &\stackrel{\text{def}}{=} \{ ((x,(a,b)), ((a',b'),y)) \in S \times S' \mid p_{1}(x,(a,b)) = p_{2}((a',b'),y) \} \\ &\stackrel{\text{def}}{=} \{ ((x,(a,b)), ((a',b'),y)) \in S \times S' \mid (a,b) = (a',b') \} \\ &\cong \{ ((x,a,b,y)) \in X \times A \times B \times Y \mid \phi(x) = a, \psi(y) = b, \text{ and } f(a) = g(b) \} \\ &\stackrel{\text{def}}{=} \{ ((x,a,b,y)) \in X \times A \times B \times Y \mid f(\phi(x)) = g(\psi(y)) \} \\ &\stackrel{\text{def}}{=} X \times_{K} Y. \end{split}$$

This finishes the proof.

Item 6: Unitality

We have

$$X \times_X A \cong \{(x, a) \in X \times A \mid f(a) = x\},\$$

$$A \times_X X \cong \{(a, x) \in X \times A \mid f(a) = x\},\$$

which are isomorphic to A via the maps $(x, a) \mapsto a$ and $(a, x) \mapsto a$. The proof of the naturality of $\lambda^{\text{Sets}/X}$ and $\rho^{\text{Sets}/X}$ is omitted.

Item 7: Commutativity

We have

$$A \times_C B \stackrel{\text{def}}{=} \{(a, b) \in A \times B \mid f(a) = g(b)\}$$

$$= \{(a, b) \in A \times B \mid g(b) = f(a)\}$$

$$\cong \{(b, a) \in B \times A \mid g(b) = f(a)\}$$

$$\stackrel{\text{def}}{=} B \times_C A.$$

The proof of the naturality of $\sigma^{\text{Sets}/X}$ is omitted.

Item 8: Distributivity Over Coproducts

We have

$$A \times_{X} (B \coprod C) \stackrel{\text{def}}{=} \left\{ (a, z) \in A \times (B \coprod C) \middle| \phi_{A}(a) = \phi_{B \coprod C}(z) \right\}$$

$$= \left\{ (a, z) \in A \times (B \coprod C) \middle| z = (0, b) \text{ and } \phi_{A}(a) = \phi_{B \coprod C}(z) \right\}$$

$$\cup \left\{ (a, z) \in A \times (B \coprod C) \middle| z = (1, c) \text{ and } \phi_{A}(a) = \phi_{B \coprod C}(z) \right\}$$

$$= \left\{ (a, z) \in A \times (B \coprod C) \middle| z = (0, b) \text{ and } \phi_{A}(a) = \phi_{B}(b) \right\}$$

$$\cup \left\{ (a, z) \in A \times (B \coprod C) \middle| z = (1, c) \text{ and } \phi_{A}(a) = \phi_{C}(c) \right\}$$

$$\cong \left\{ (a, b) \in A \times B \middle| \phi_{A}(a) = \phi_{B}(b) \right\}$$

$$\cup \left\{ (a, c) \in A \times C \middle| \phi_{A}(a) = \phi_{C}(c) \right\}$$

$$\stackrel{\text{def}}{=} (A \times_{X} B) \cup (A \times_{X} C)$$

$$\cong (A \times_{X} B) \coprod (A \times_{X} C),$$

with the construction of the isomorphism

$$\delta_r^{\mathsf{Sets}_{/X}} : (A \coprod B) \times_X C \xrightarrow{\sim} (A \times_X C) \coprod (B \times_X C)$$

being similar. The proof of the naturality of $\delta_\ell^{\mathrm{Sets}_{/X}}$ and $\delta_r^{\mathrm{Sets}_{/X}}$ is omitted.

Item 9: Annihilation With the Empty Set

We have

$$A \times_X \emptyset \stackrel{\text{def}}{=} \{(a, b) \in A \times \emptyset \mid f(a) = g(b)\}$$
$$= \{k \in \emptyset \mid f(a) = g(b)\}$$
$$= \emptyset.$$

and similarly for $\emptyset \times_X A$, where we have used Item 8 of Proposition 4.1.3.1.4. The proof of the naturality of $\zeta_\ell^{\mathsf{Sets}_{/X}}$ and $\zeta_r^{\mathsf{Sets}_{/X}}$ is omitted.

Item 10: Interaction With Products

We have

$$A \times_{\text{pt}} B \stackrel{\text{def}}{=} \{(a, b) \in A \times B \mid !_A(a) = !_B(b)\}$$

$$\stackrel{\text{def}}{=} \{(a, b) \in A \times B \mid \star = \star\}$$

$$= \{(a, b) \in A \times B\}$$

$$= A \times B.$$

Item 11: Symmetric Monoidality

Omitted.

001L 4.1.5 Equalisers

Let *A* and *B* be sets and let $f, g: A \Rightarrow B$ be functions.

001M DEFINITION 4.1.5.1.1 ► EQUALISERS OF SETS

The **equaliser of** f **and** g is the equaliser of f and g in Sets as in Limits and Colimits, ??.

01E1

01E2

01E0 CONSTRUCTION 4.1.5.1.2 ➤ CONSTRUCTION OF EQUALISERS OF SETS

Concretely, the equaliser of f and g is the pair $({\rm Eq}(f,g),{\rm eq}(f,g))$ consisting of:

1. *The Limit*. The set Eq(f, g) defined by

$$\operatorname{Eq}(f,g) \stackrel{\text{def}}{=} \{ a \in A \mid f(a) = g(a) \}.$$

2. The Cone. The inclusion map

$$eq(f,g) : Eq(f,g) \hookrightarrow A.$$

PROOF 4.1.5.1.3 ▶ Proof of Construction 4.1.5.1.2

We claim that $\mathrm{Eq}(f,g)$ is the categorical equaliser of f and g in Sets. First we need to check that the relevant equaliser diagram commutes, i.e. that we have

$$f \circ eq(f,g) = g \circ eq(f,g),$$

which indeed holds by the definition of the set ${\rm Eq}(f,g)$. Next, we prove that ${\rm Eq}(f,g)$ satisfies the universal property of the equaliser. Suppose we have a diagram of the form

$$\operatorname{Eq}(f,g) \xrightarrow{\operatorname{eq}(f,g)} A \xrightarrow{f} B$$

$$E$$

in Sets. Then there exists a unique map $\phi\colon E\to \operatorname{Eq}(f,g)$ making the diagram

$$\begin{array}{ccc}
\operatorname{Eq}(f,g) & \xrightarrow{\operatorname{eq}(f,g)} A & \xrightarrow{f} B \\
\downarrow & & \downarrow & \\
\downarrow & & & \\
E & & & \\
\end{array}$$

commute, being uniquely determined by the condition

$$eq(f,g) \circ \phi = e$$

via

$$\phi(x) = e(x)$$

for each $x \in E$, where we note that $e(x) \in A$ indeed lies in Eq(f,g) by the condition

$$f \circ e = g \circ e$$
,

which gives

$$f(e(x)) = g(e(x))$$

for each $x \in E$, so that $e(x) \in \text{Eq}(f, q)$.

001N

PROPOSITION 4.1.5.1.4 ▶ PROPERTIES OF EQUALISERS OF SETS

Let A, B, and C be sets.

001P

1. Associativity. We have isomorphisms of sets¹

$$\underbrace{\mathrm{Eq}(f \circ \mathrm{eq}(g,h), g \circ \mathrm{eq}(g,h))}_{=\mathrm{Eq}(f \circ \mathrm{eq}(g,h), h \circ \mathrm{eq}(g,h))} \cong \underbrace{\mathrm{Eq}(f,g,h)}_{=\mathrm{Eq}(g \circ \mathrm{eq}(f,g), h \circ \mathrm{eq}(f,g))} \underbrace{\mathrm{Eq}(f \circ \mathrm{eq}(f,g), h \circ \mathrm{eq}(f,g))}_{=\mathrm{Eq}(g \circ \mathrm{eq}(f,g), h \circ \mathrm{eq}(f,g))}$$

where Eq(f, g, h) is the limit of the diagram

$$A \xrightarrow{f \atop -g \xrightarrow{h}} B$$

in Sets, being explicitly given by

$$Eq(f, g, h) \cong \{a \in A \mid f(a) = g(a) = h(a)\}.$$

001Q

2. Unitality. We have an isomorphism of sets

$$\operatorname{Eq}(f, f) \cong A$$
.

001R

3. Commutativity. We have an isomorphism of sets

$$\operatorname{Eq}(f, g) \cong \operatorname{Eq}(g, f)$$
.

001S

4. Interaction With Composition. Let

$$A \stackrel{f}{\underset{g}{\Longrightarrow}} B \stackrel{h}{\underset{k}{\Longrightarrow}} C$$

be functions. We have an inclusion of sets

$$\operatorname{Eq}(h \circ f \circ \operatorname{eq}(f, g), k \circ g \circ \operatorname{eq}(f, g)) \subset \operatorname{Eq}(h \circ f, k \circ g),$$

where Eq $(h \circ f \circ \text{eq}(f,g), k \circ g \circ \text{eq}(f,g))$ is the equaliser of the composition

$$\operatorname{Eq}(f,g) \overset{\operatorname{eq}(f,g)}{\hookrightarrow} A \overset{f}{\underset{g}{\Longrightarrow}} B \overset{h}{\underset{k}{\Longrightarrow}} C.$$

¹That is, the following three ways of forming "the" equaliser of (f, g, h) agree:

01ZE

(a) Take the equaliser of (f, g, h), i.e. the limit of the diagram

$$A \xrightarrow{f \atop b} B$$

in Sets.

01ZF

(b) First take the equaliser of f and q, forming a diagram

$$\operatorname{Eq}(f,g) \stackrel{\operatorname{eq}(f,g)}{\hookrightarrow} A \stackrel{f}{\underset{g}{\Longrightarrow}} B$$

and then take the equaliser of the composition

$$\operatorname{Eq}(f,g) \stackrel{\operatorname{eq}(f,g)}{\hookrightarrow} A \stackrel{f}{\underset{h}{\Longrightarrow}} B,$$

obtaining a subset

$$\mathrm{Eq}(f\circ\mathrm{eq}(f,g),h\circ\mathrm{eq}(f,g))=\mathrm{Eq}(g\circ\mathrm{eq}(f,g),h\circ\mathrm{eq}(f,g))$$
 of $\mathrm{Eq}(f,g).$

01ZG

(c) First take the equaliser of q and h, forming a diagram

$$\operatorname{Eq}(g,h) \overset{\operatorname{eq}(g,h)}{\hookrightarrow} A \overset{g}{\underset{h}{\Longrightarrow}} B$$

4.1.5 Equalisers

39

and then take the equaliser of the composition

$$\operatorname{Eq}(g,h) \overset{\operatorname{eq}(g,h)}{\hookrightarrow} A \overset{f}{\underset{q}{\Longrightarrow}} B,$$

obtaining a subset

$${\rm Eq}(f\circ {\rm eq}(g,h),g\circ {\rm eq}(g,h))={\rm Eq}(f\circ {\rm eq}(g,h),h\circ {\rm eq}(g,h))$$
 of ${\rm Eq}(g,h).$

PROOF 4.1.5.1.5 ► PROOF OF PROPOSITION 4.1.5.1.4

Item 1: Associativity

We first prove that Eq(f, g, h) is indeed given by

$$Eq(f, q, h) \cong \{a \in A \mid f(a) = q(a) = h(a)\}.$$

Indeed, suppose we have a diagram of the form

$$\operatorname{Eq}(f,g,h) \xrightarrow{\operatorname{eq}(f,g,h)} A \xrightarrow{f \atop h} B$$

in Sets. Then there exists a unique map $\phi\colon E\to \operatorname{Eq}(f,g,h),$ uniquely determined by the condition

$$eq(f,g) \circ \phi = e$$

being necessarily given by

$$\phi(x) = e(x)$$

for each $x \in E$, where we note that $e(x) \in A$ indeed lies in Eq(f, g, h) by the condition

$$f \circ e = g \circ e = h \circ e$$
,

which gives

$$f(e(x)) = g(e(x)) = h(e(x))$$

for each $x \in E$, so that $e(x) \in Eq(f, q, h)$.

We now check the equalities

$$\operatorname{Eq}(f \circ \operatorname{eq}(g, h), g \circ \operatorname{eq}(g, h)) \cong \operatorname{Eq}(f, g, h) \cong \operatorname{Eq}(f \circ \operatorname{eq}(f, g), h \circ \operatorname{eq}(f, g)).$$

Indeed, we have

$$\begin{split} \operatorname{Eq}(f \circ \operatorname{eq}(g,h), g \circ \operatorname{eq}(g,h)) &\cong \{x \in \operatorname{Eq}(g,h) \mid [f \circ \operatorname{eq}(g,h)](a) = [g \circ \operatorname{eq}(g,h)](a) \} \\ &\cong \{x \in \operatorname{Eq}(g,h) \mid f(a) = g(a) \} \\ &\cong \{x \in A \mid f(a) = g(a) \text{ and } g(a) = h(a) \} \\ &\cong \{x \in A \mid f(a) = g(a) = h(a) \} \\ &\cong \operatorname{Eq}(f,g,h). \end{split}$$

Similarly, we have

$$\begin{split} \operatorname{Eq}(f \circ \operatorname{eq}(f,g), h \circ \operatorname{eq}(f,g)) &\cong \{x \in \operatorname{Eq}(f,g) \mid [f \circ \operatorname{eq}(f,g)](a) = [h \circ \operatorname{eq}(f,g)](a) \} \\ &\cong \{x \in \operatorname{Eq}(f,g) \mid f(a) = h(a) \} \\ &\cong \{x \in A \mid f(a) = h(a) \text{ and } f(a) = g(a) \} \\ &\cong \{x \in A \mid f(a) = g(a) = h(a) \} \\ &\cong \operatorname{Eq}(f,g,h). \end{split}$$

Item 2: Unitality

Indeed, we have

$$\operatorname{Eq}(f, f) \stackrel{\text{def}}{=} \{ a \in A \mid f(a) = f(a) \}$$
$$= A.$$

Item 3: Commutativity

Indeed, we have

$$\begin{aligned} \operatorname{Eq}(f,g) &\stackrel{\text{def}}{=} \{a \in A \mid f(a) = g(a)\} \\ &= \{a \in A \mid g(a) = f(a)\} \\ &\stackrel{\text{def}}{=} \operatorname{Eq}(g,f). \end{aligned}$$

Item 4: Interaction With Composition

Indeed, we have

$$\begin{split} \operatorname{Eq}(h \circ f \circ \operatorname{eq}(f,g), k \circ g \circ \operatorname{eq}(f,g)) & \cong \{a \in \operatorname{Eq}(f,g) \mid h(f(a)) = k(g(a))\} \\ & \cong \{a \in A \mid f(a) = g(a) \text{ and } h(f(a)) = k(g(a))\}. \end{split}$$

and

$$\operatorname{Eq}(h \circ f, k \circ g) \cong \{a \in A \mid h(f(a)) = k(g(a))\},\$$

and thus there's an inclusion from $\operatorname{Eq}(h\circ f\circ\operatorname{eq}(f,g),k\circ g\circ\operatorname{eq}(f,g))$ to $\operatorname{Eq}(h\circ f,k\circ g).$

01E3 4.1.6 Inverse Limits

Let $(X_{\alpha}, f_{\alpha\beta})_{\alpha,\beta\in I} \colon (I, \preceq) \to \mathsf{Sets}$ be an inverse system of sets.

01E4 DEFINITION 4.1.6.1.1 ► INVERSE LIMITS OF SETS

The **inverse limit of** $(X_{\alpha}, f_{\alpha\beta})_{\alpha,\beta\in I}$ is the inverse limit of $(X_{\alpha}, f_{\alpha\beta})_{\alpha,\beta\in I}$ in Sets as in Limits and Colimits, ??.

01E5 CONSTRUCTION 4.1.6.1.2 ➤ CONSTRUCTION OF INVERSE LIMITS OF SETS

Concretely, the inverse limit of $(X_{\alpha}, f_{\alpha\beta})_{\alpha,\beta\in I}$ is the pair $(\lim_{\alpha\in I}(X_{\alpha}), \{\operatorname{pr}_{\alpha}\}_{\alpha\in I})$ consisting of:

01E6 1. *The Limit.* The set $\lim_{\alpha \in I} (X_{\alpha})$ defined by

$$\lim_{\substack{\longleftarrow \\ \alpha \in I}} (X_{\alpha}) \stackrel{\text{def}}{=} \left\{ (x_{\alpha})_{\alpha \in I} \in \prod_{\alpha \in I} X_{\alpha} \middle| \begin{array}{l} \text{for each } \alpha, \beta \in I, \text{if } \alpha \preceq \beta, \\ \text{then we have } x_{\alpha} = f_{\alpha\beta}(x_{\beta}) \end{array} \right\}.$$

01E7

2. The Cone. The collection

$$\left\{ \operatorname{pr}_{\gamma} \colon \lim_{\stackrel{\longleftarrow}{\alpha \in I}} (X_{\alpha}) \to X_{\gamma} \right\}_{\gamma \in I}$$

of maps of sets defined as the restriction of the maps

$$\left\{ \operatorname{pr}_{\gamma} \colon \prod_{\alpha \in I} X_{\alpha} \to X_{\gamma} \right\}_{\gamma \in I}$$

of Item 2 of Construction 4.1.2.1.2 to $\lim_{\stackrel{\longleftarrow}{\alpha \in I}} (X_{\alpha})$ and hence given by

$$\operatorname{pr}_{\gamma}((x_{\alpha})_{\alpha\in I})\stackrel{\mathrm{def}}{=} x_{\gamma}$$

for each $\gamma \in I$ and each $(x_{\alpha})_{\alpha \in I} \in \lim_{\alpha \in I} (X_{\alpha})$.

PROOF 4.1.6.1.3 ► PROOF OF CONSTRUCTION 4.1.6.1.2

We claim that $\lim_{\leftarrow \alpha \in I} (X_{\alpha})$ is the limit of the inverse system of sets $(X_{\alpha}, f_{\alpha\beta})_{\alpha,\beta \in I}$. First we need to check that the limit diagram defined by it commutes, i.e. that we have

$$f_{\alpha\beta} \circ \operatorname{pr}_{\alpha} = \operatorname{pr}_{\beta}, \qquad \lim_{\alpha \in I} (X_{\alpha})$$

$$X_{\alpha} \xrightarrow{f_{\alpha\beta}} X_{\beta}$$

for each $\alpha, \beta \in I$ with $\alpha \leq \beta$. Indeed, given $(x_{\gamma})_{\gamma \in I} \in \lim_{\leftarrow \gamma \in I} (X_{\gamma})$, we have

$$[f_{\alpha\beta} \circ \operatorname{pr}_{\alpha}]((x_{\gamma})_{\gamma \in I}) \stackrel{\text{def}}{=} f_{\alpha\beta}(\operatorname{pr}_{\alpha}((x_{\gamma})_{\gamma \in I}))$$

4.1.6 Inverse Limits

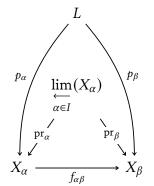

$$\stackrel{\text{def}}{=} f_{\alpha\beta}(x_{\alpha})$$

$$= x_{\beta}$$

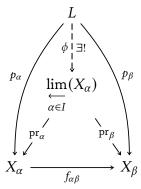

$$\stackrel{\text{def}}{=} \operatorname{pr}_{\beta}((x_{\gamma})_{\gamma \in I}),$$

43

where the third equality comes from the definition of $\lim_{\longleftarrow \alpha \in I} (X_{\alpha})$. Next, we prove that $\lim_{\longleftarrow \alpha \in I} (X_{\alpha})$ satisfies the universal property of an inverse limit. Suppose that we have, for each $\alpha, \beta \in I$ with $\alpha \preceq \beta$, a diagram of the form

in Sets. Then there indeed exists a unique map $\phi\colon L \stackrel{\exists !}{\longrightarrow} \varprojlim_{\alpha \in I} (X_\alpha)$ making the diagram

commute, being uniquely determined by the family of conditions

$$\left\{p_{\alpha} = \operatorname{pr}_{\alpha} \circ \phi\right\}_{\alpha \in I}$$

via

01E9

01EA

01EB

$$\phi(\ell) = (p_\alpha(\ell))_{\alpha \in I}$$

for each $\ell \in L$, where we note that $(p_{\alpha}(\ell))_{\alpha \in I} \in \prod_{\alpha \in I} X_{\alpha}$ indeed lies in $\lim_{\alpha \in I} (X_{\alpha})$, as we have

$$f_{\alpha\beta}(p_{\alpha}(\ell)) \stackrel{\text{def}}{=} [f_{\alpha\beta} \circ p_{\alpha}](\ell)$$
$$\stackrel{\text{def}}{=} p_{\beta}(\ell)$$

for each $\beta \in I$ with $\alpha \leq \beta$ by the commutativity of the diagram for $(L, \{p_{\alpha}\}_{\alpha \in I})$.

01E8 EXAMPLE 4.1.6.1.4 ► EXAMPLES OF INVERSE LIMITS OF SETS

Here are some examples of inverse limits of sets.

1. The p-Adic Integers. The ring of p-adic integers \mathbb{Z}_p of $\ref{eq:p-Adic}$ is the inverse limit

$$\mathbb{Z}_p \cong \lim_{\substack{\longleftarrow \\ n \in \mathbb{N}}} (\mathbb{Z}_{/p^n});$$

see ??.

2. *Rings of Formal Power Series*. The ring R[t] of formal power series in a variable t is the inverse limit

$$R[[t]] \cong \lim_{\substack{\longleftarrow \\ n \in \mathbb{N}}} (R[t]/t^n R[t]);$$

see??.

3. *Profinite Groups*. Profinite groups are inverse limits of finite groups; see ??.

001T 4.2 Colimits of Sets

001U 4.2.1 The Initial Set

01ED

01EE

001V DEFINITION 4.2.1.1.1 ► THE INITIAL SET

The initial set is the initial object of Sets as in Limits and Colimits, ??.

01EC CONSTRUCTION 4.2.1.1.2 ► CONSTRUCTION OF THE INITIAL SET

Concretely, the initial set is the pair $(\emptyset, \{\iota_A\}_{A \in \text{Obj}(\mathsf{Sets})})$ consisting of:

- 1. *The Colimit*. The empty set Ø of Definition 4.3.1.1.1.
 - 2. The Cocone. The collection of maps

$$\{\iota_A \colon \emptyset \to A\}_{A \in \text{Obi(Sets)}}$$

given by the inclusion maps from \emptyset to A.

PROOF 4.2.1.1.3 ► PROOF OF CONSTRUCTION 4.2.1.1.2

We claim that \emptyset is the initial object of Sets. Indeed, suppose we have a diagram of the form

in Sets. Then there exists a unique map $\phi \colon \emptyset \to A$ making the diagram

$$\emptyset - \frac{\phi}{\exists !} \rightarrow A$$

commute, namely the inclusion map ι_A .

001W 4.2.2 Coproducts of Families of Sets

0021 DEFINITION 4.2.3.1.1 ➤ COPRODUCTS OF SETS

The **coproduct of** A **and** B^1 is the coproduct of A and B in Sets as in Limits and Colimits, ??.

¹Further Terminology: Also called the **disjoint union of** A **and** B.

01EJ CONSTRUCTION 4.2.3.1.2 ► CONSTRUCTION OF COPRODUCTS OF SETS

Concretely, the coproduct of A and B is the pair $(A \coprod B, \{ \inf_1, \inf_2 \})$ consisting of:

1. The Colimit. The set $A \coprod B$ defined by

$$A \coprod B \stackrel{\text{def}}{=} \coprod_{z \in \{A, B\}} z$$

$$\stackrel{\text{def}}{=} \{(0, a) \in S \mid a \in A\} \cup \{(1, b) \in S \mid b \in B\},$$

where $S = \{0, 1\} \times (A \cup B)$.

2. The Cocone. The maps

$$inj_1: A \to A \coprod B,$$

 $inj_2: B \to A \coprod B,$

given by

$$\operatorname{inj}_{1}(a) \stackrel{\text{def}}{=} (0, a),$$

 $\operatorname{inj}_{2}(b) \stackrel{\text{def}}{=} (1, b),$

for each $a \in A$ and each $b \in B$.

PROOF 4.2.3.1.3 ▶ PROOF OF CONSTRUCTION 4.2.3.1.2

We claim that $A \coprod B$ is the categorical coproduct of A and B in Sets. Indeed, suppose we have a diagram of the form

$$A \xrightarrow[\text{inj}_1]{l_1} A \coprod B \xrightarrow[\text{inj}_2]{l_2} B$$

in Sets. Then there exists a unique map $\phi\colon A\coprod B\to C$ making the diagram

$$A \xrightarrow[\text{inj}_{1}]{l} A \xrightarrow[\text{inj}_{2}]{l} B \xrightarrow[\text{inj}_{2}]{l} B$$

commute, being uniquely determined by the conditions

$$\phi \circ \operatorname{inj}_A = \iota_A,$$

 $\phi \circ \operatorname{inj}_B = \iota_B$

via

$$\phi(x) = \begin{cases} \iota_A(a) & \text{if } x = (0, a), \\ \iota_B(b) & \text{if } x = (1, b) \end{cases}$$

for each $x \in A \coprod B$.

0022 PROPOSITION 4.2.3.1.4 ➤ PROPERTIES OF COPRODUCTS OF SETS

Let A, B, C, and X be sets.

oo23

1. Functoriality. The assignment $A, B, (A, B) \mapsto A \coprod B$ defines functors

$$A \coprod -:$$
 Sets \rightarrow Sets,
 $- \coprod B:$ Sets \rightarrow Sets,
 $-_1 \coprod -_2:$ Sets \times Sets \rightarrow Sets,

where $-_1 \coprod -_2$ is the functor where

• Action on Objects. For each $(A,B) \in \mathsf{Obj}(\mathsf{Sets} \times \mathsf{Sets}),$ we have

$$[-_1 \coprod -_2](A, B) \stackrel{\text{def}}{=} A \coprod B.$$

• Action on Morphisms. For each $(A, B), (X, Y) \in Obj(Sets)$, the action on Hom-sets

$$\coprod_{(A,B),(X,Y)} : \mathsf{Sets}(A,X) \times \mathsf{Sets}(B,Y) \to \mathsf{Sets}(A \coprod B,X \coprod Y)$$

of \coprod at ((A, B), (X, Y)) is defined by sending (f, g) to the function

$$f \coprod g: A \coprod B \to X \coprod Y$$

defined by

$$[f \coprod g](x) \stackrel{\text{def}}{=} \begin{cases} (0, f(a)) & \text{if } x = (0, a), \\ (1, g(b)) & \text{if } x = (1, b), \end{cases}$$

for each $x \in A \coprod B$.

and where $A \coprod -$ and $- \coprod B$ are the partial functors of $-_1 \coprod -_2$ at $A, B \in \mathsf{Obj}(\mathsf{Sets})$.

2. Adjointness. We have an adjunction

$$(-_1 \coprod -_2 \dashv \Delta_{\mathsf{Sets}})$$
: Sets \times Sets $\underbrace{ }_{\Delta_{\mathsf{Sets}}}^{-_1 \coprod -_2}$ Sets,

witnessed by a bijection

$$Sets(A \coprod B, C)$$
, $\cong Hom_{Sets \times Sets}((A, B), (C, C))$

natural in $(A, B) \in Obj(Sets \times Sets)$ and in $C \in Obj(Sets)$.

01ZH

0024

3. Associativity. We have an isomorphism of sets

$$\alpha_{X,Y,Z}^{\mathsf{Sets},\coprod} : (X \coprod Y) \coprod Z \xrightarrow{\sim} X \coprod (Y \coprod Z),$$

natural in $X, Y, Z \in Obj(Sets)$.

0025

4. Unitality. We have isomorphisms of sets

$$\lambda_X^{\mathsf{Sets}, \coprod} : \emptyset \coprod X \xrightarrow{\sim} X,$$
 $\rho_X^{\mathsf{Sets}, \coprod} : X \coprod \emptyset \xrightarrow{\sim} X,$

natural in $X \in Obj(Sets)$.

0026

5. Commutativity. We have an isomorphism of sets

$$\sigma_{XY}^{\mathsf{Sets},\coprod}: X\coprod Y \xrightarrow{\sim} Y\coprod X,$$

natural in $X, Y \in Obj(Sets)$.

0027

6. Symmetric Monoidality. The 7-tuple (Sets, \coprod , \emptyset , α_{\coprod}^{Sets} , λ_{\coprod}^{Sets} , ρ_{\coprod}^{Sets} , σ_{\coprod}^{Sets}) is a symmetric monoidal category.

PROOF 4.2.3.1.5 ► PROOF OF PROPOSITION 4.2.3.1.4

Item 1: Functoriality

This follows from Limits and Colimits, ?? of ??.

Item 2: Adjointness

This follows from the universal property of the coproduct.

Item 3: Associativity

This is proved in the proof of Monoidal Structures on the Category of Sets, Definition 5.2.3.1.1.

Item 4: Unitality

This is proved in the proof of Monoidal Structures on the Category of Sets, Definitions 5.2.4.1.1 and 5.2.5.1.1.

Item 5: Commutativity

This is proved in the proof of Monoidal Structures on the Category of Sets, Definition 5.2.6.1.1.

Item 6: Symmetric Monoidality

This is a repetition of Monoidal Structures on the Category of Sets, Proposition 5.2.7.1.1, and is proved there.

0028 4.2.4 Pushouts

01EN

01EP

Let A, B, and C be sets and let $f: C \to A$ and $g: C \to B$ be functions.

0029 DEFINITION 4.2.4.1.1 ▶ PUSHOUTS OF SETS

The **pushout of** A **and** B **over** C **along** f **and** g^1 is the pushout of A and B over C along f and g in Sets as in Limits and Colimits, ??.

O1EM CONSTRUCTION 4.2.4.1.2 ► CONSTRUCTION OF PUSHOUTS OF SETS

Concretely, the pushout of A and B over C along f and g is the pair $(A \coprod_C B, \{\text{inj}_1, \text{inj}_2\})$ consisting of:

1. *The Colimit*. The set $A \coprod_C B$ defined by

$$A \coprod_C B \stackrel{\text{def}}{=} A \coprod_C B/\sim_C$$

where \sim_C is the equivalence relation on $A \coprod B$ generated by $(0, f(c)) \sim_C (1, g(c))$.

2. The Cocone. The maps

$$inj_1: A \to A \coprod_C B$$
,

¹Further Terminology: Also called the **fibre coproduct of** A **and** B **over** C **along** f **and** g.

4.2.4 Pushouts 54

$$inj_2: B \to A \coprod_C B$$

given by

$$\operatorname{inj}_{1}(a) \stackrel{\text{def}}{=} [(0, a)]$$

 $\operatorname{inj}_{2}(b) \stackrel{\text{def}}{=} [(1, b)]$

for each $a \in A$ and each $b \in B$.

PROOF 4.2.4.1.3 ► PROOF OF CONSTRUCTION 4.2.4.1.2

We claim that $A \coprod_C B$ is the categorical pushout of A and B over C with respect to (f,g) in Sets. First we need to check that the relevant pushout diagram commutes, i.e. that we have

$$A \coprod_{C} B \xleftarrow{\operatorname{inj}_{2}} B$$

$$\operatorname{inj}_{1} \circ f = \operatorname{inj}_{2} \circ g, \qquad \operatorname{inj}_{1} \qquad \int_{g} g$$

$$A \longleftarrow_{f} C.$$

Indeed, given $c \in C$, we have

$$[inj_1 \circ f](c) = inj_1(f(c))$$

$$= [(0, f(c))]$$

$$= [(1, g(c))]$$

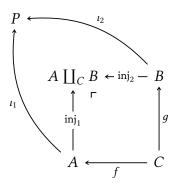

$$= inj_2(g(c))$$

$$= [inj_2 \circ g](c),$$

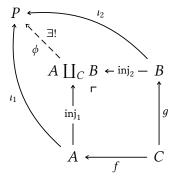

where [(0, f(c))] = [(1, g(c))] by the definition of the relation \sim on $A \coprod B$. Next, we prove that $A \coprod {}_{C}B$ satisfies the universal property of

4.2.4 Pushouts 55

the pushout. Suppose we have a diagram of the form

in Sets. Then there exists a unique map $\phi\colon A\coprod_C B\to P$ making the diagram

commute, being uniquely determined by the conditions

$$\phi \circ \operatorname{inj}_1 = \iota_1,$$

$$\phi \circ \operatorname{inj}_2 = \iota_2$$

via

$$\phi(x) = \begin{cases} \iota_1(a) & \text{if } x = [(0, a)], \\ \iota_2(b) & \text{if } x = [(1, b)] \end{cases}$$

for each $x \in A \coprod_C B$, where the well-definedness of ϕ is guaranteed by the equality $\iota_1 \circ f = \iota_2 \circ g$ and the definition of the relation \sim on $A \coprod B$ as follows:

01EQ

1. Case 1: Suppose we have x = [(0, a)] = [(0, a')] for some $a, a' \in A$. Then, by Remark 4.2.4.1.4, we have a sequence

$$(0,a) \sim' x_1 \sim' \cdots \sim' x_n \sim' (0,a').$$

01ER

2. Case 2: Suppose we have x = [(1, b)] = [(1, b')] for some $b, b' \in B$. Then, by Remark 4.2.4.1.4, we have a sequence

$$(1,b) \sim' x_1 \sim' \cdots \sim' x_n \sim' (1,b').$$

01ES

3. Case 3: Suppose we have x = [(0, a)] = [(1, b)] for some $a \in A$ and $b \in B$. Then, by Remark 4.2.4.1.4, we have a sequence

$$(0, a) \sim' x_1 \sim' \cdots \sim' x_n \sim' (1, b).$$

In all these cases, we declare $x \sim' y$ iff there exists some $c \in C$ such that x = (0, f(c)) and y = (1, g(c)) or x = (1, g(c)) and y = (0, f(c)). Then, the equality $\iota_1 \circ f = \iota_2 \circ g$ gives

$$\phi([x]) = \phi([(0, f(c))])
\stackrel{\text{def}}{=} \iota_1(f(c))
= \iota_2(g(c))
\stackrel{\text{def}}{=} \phi([(1, g(c))])
= \phi([y]),$$

with the case where x=(1,g(c)) and y=(0,f(c)) similarly giving $\phi([x])=\phi([y])$. Thus, if $x\sim' y$, then $\phi([x])=\phi([y])$. Applying this equality pairwise to the sequences

$$(0,a) \sim' x_1 \sim' \cdots \sim' x_n \sim' (0,a'),$$

$$(1,b) \sim' x_1 \sim' \cdots \sim' x_n \sim' (1,b'),$$

$$(0,a) \sim' x_1 \sim' \cdots \sim' x_n \sim' (1,b)$$

gives

$$\phi([(0,a)]) = \phi([(0,a')]),$$

4.2.4 Pushouts 57

$$\phi([(1,b)]) = \phi([(1,b')]),$$

$$\phi([(0,a)]) = \phi([(1,b)]),$$

showing ϕ to be well-defined.

002A REMARK 4.2.4.1.4 ► Unwinding Definition 4.2.4.1.1

In detail, by Conditions on Relations, Construction 10.5.2.1.2, the relation \sim of Definition 4.2.4.1.1 is given by declaring $a \sim b$ iff one of the following conditions is satisfied:

- 01ET 1. We have $a, b \in A$ and a = b.
- **01EU** 2. We have $a, b \in B$ and a = b.

01EV

01EW

01EX

01EY

01ZJ

01ZK 01EZ

01ZL 01ZM

01F0

01F1

01F2

- 3. There exist $x_1, \ldots, x_n \in A \coprod B$ such that $a \sim' x_1 \sim' \cdots \sim' x_n \sim' b$, where we declare $x \sim' y$ if one of the following conditions is satisfied:
 - (a) There exists $c \in C$ such that x = (0, f(c)) and y = (1, g(c)).
 - (b) There exists $c \in C$ such that x = (1, g(c)) and y = (0, f(c)).

In other words, there exist $x_1, \ldots, x_n \in A \coprod B$ satisfying the following conditions:

- (c) There exists $c_0 \in C$ satisfying one of the following conditions:
 - i. We have $a = f(c_0)$ and $x_1 = g(c_0)$.
 - ii. We have $a = g(c_0)$ and $x_1 = f(c_0)$.
- (d) For each $1 \le i \le n-1$, there exists $c_i \in C$ satisfying one of the following conditions:
 - i. We have $x_i = f(c_i)$ and $x_{i+1} = g(c_i)$.
 - ii. We have $x_i = g(c_i)$ and $x_{i+1} = f(c_i)$.
- (e) There exists $c_n \in C$ satisfying one of the following conditions:
 - i. We have $x_n = f(c_n)$ and $b = g(c_n)$.
 - ii. We have $x_n = g(c_n)$ and $b = f(c_n)$.

4.2.4 Pushouts 58

-

01ZN

It is common practice to write $A \coprod_{C} B$ for the pushout of A and B over C along f and g, omitting the maps f and g from the notation and instead leaving them implicit, to be understood from the context.

However, the set $A \coprod_C B$ depends very much on the maps f and g, and sometimes it is necessary or useful to note this dependence explicitly. In such situations, we will write $A \coprod_{f,C,g} B$ or $A \coprod_{C} {}^{f,g} B$ for $A \coprod_{C} B$.

002B EXAMPLE 4.2.4.1.6 ► EXAMPLES OF PUSHOUTS OF SETS

002C

002D

Here are some examples of pushouts of sets.

- 1. Wedge Sums of Pointed Sets. The wedge sum of two pointed sets of Pointed Sets, Definition 6.3.3.1.1 is an example of a pushout of sets.
- 2. Intersections via Unions. Let X be a set. We have

$$A \cup B \cong A \coprod_{A \cap B} B, \qquad \uparrow \qquad \uparrow \qquad \uparrow$$

$$A \longleftarrow A \cap B$$

for each $A, B \in \mathcal{P}(X)$.

PROOF 4.2.4.1.7 ▶ PROOF OF EXAMPLE 4.2.4.1.6

Item 1: Wedge Sums of Pointed Sets

This follows by definition, as the wedge sum of two pointed sets is defined as a pushout.

Item 2: Intersections via Unions

Indeed, $A \coprod_{A \cap B} B$ is the quotient of $A \coprod B$ by the equivalence relation obtained by declaring $(0, a) \sim (1, b)$ iff $a = b \in A \cap B$, which is in bijection with $A \cup B$ via the map with $[(0, a)] \mapsto a$ and $[(1, b)] \mapsto b$.

002E PROPOSITION 4.2.4.1.8 ➤ PROPERTIES OF PUSHOUTS OF SETS

Let A, B, C, and X be sets.

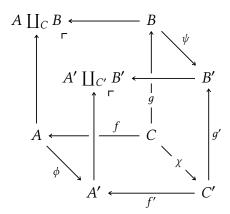

1. Functoriality. The assignment $(A,B,C,f,g)\mapsto A\coprod_{f,C,g}B$ defines a functor

$$-_1 \coprod_{-_2} -_1 : \operatorname{\mathsf{Fun}}(\mathcal{P},\operatorname{\mathsf{Sets}}) \to \operatorname{\mathsf{Sets}},$$

where ${\cal P}$ is the category that looks like this:

In particular, the action on morphisms of $-1 \coprod_{-3} -1$ is given by sending a morphism

in Fun(\mathcal{P} , Sets) to the map $\xi \colon A \coprod_{C} B \xrightarrow{\exists !} A' \coprod_{C'} B'$ given by

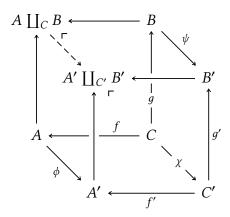

$$\xi(x) \stackrel{\text{def}}{=} \begin{cases} \phi(a) & \text{if } x = [(0, a)], \\ \psi(b) & \text{if } x = [(1, b)] \end{cases}$$

002F

01ZP

002G

for each $x \in A \coprod_C B$, which is the unique map making the diagram

commute.

2. Adjointness. We have an adjunction

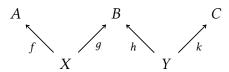

$$\left(-_1 \coprod_{X} -_2 \dashv \Delta_{\mathsf{Sets}_{X/}}\right) \colon \quad \mathsf{Sets}_{X/} \times \mathsf{Sets}_{X/} \underbrace{\overset{-_1 \coprod_{X} -_2}{\bot}}_{\Delta_{\mathsf{Sets}_{X/}}} \mathsf{Sets}_{X/},$$

witnessed by a bijection

$$\mathsf{Sets}_{X/}(A \coprod_X B, C), \cong \mathsf{Hom}_{\mathsf{Sets}_{X/} \times \mathsf{Sets}_{X/}}((A, B), (C, C))$$

natural in $(A, B) \in \mathsf{Obj}(\mathsf{Sets}_{X/} \times \mathsf{Sets}_{X/})$ and in $C \in \mathsf{Obj}(\mathsf{Sets}_{X/})$.

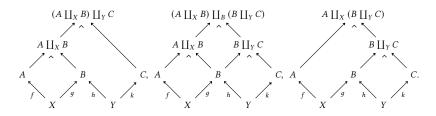

3. Associativity. Given a diagram

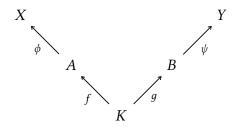

in Sets, we have isomorphisms of sets

$$(A \coprod_X B) \coprod_Y C \cong (A \coprod_X B) \coprod_B (B \coprod_Y C) \cong A \coprod_X (B \coprod_Y C)$$

where these pullbacks are built as in the diagrams

4. Interaction With Composition. Given a diagram

in Sets, we have isomorphisms of sets

$$\begin{split} X \coprod_K^{\phi \circ f, \psi \circ g} Y &\cong (X \coprod_A^{\phi, j_1} (A \coprod_K^{f, g} B)) \coprod_{A \coprod_K^{f, g} B}^{i_2, i_1} ((A \coprod_K^{f, g} B) \coprod_B^{j_2, \psi} Y) \\ &\cong X \coprod_A^{\phi, i} ((A \coprod_K^{f, g} B) \coprod_B^{j_2, \psi} Y) \\ &\cong (X \coprod_A^{\phi, i_1} (A \coprod_K^{f, g} B)) \coprod_B^{j, \psi} Y \end{split}$$

where

$$j_{1} = inj_{1}^{A \times_{K}^{f,g} B}, \qquad j_{2} = inj_{2}^{A \times_{K}^{f,g} B},$$

$$i_{1} = inj_{1}^{(A \times_{K}^{f,g} B) \times_{Y}^{q_{2}, \psi}}, \qquad i_{2} = inj_{2}^{A \times_{K}^{f,g} B} (A \times_{K}^{f,g} B),$$

$$i_{2} = inj_{2}^{A \times_{K}^{f,g} B} (A \times_{K}^{f,g} B),$$

$$i_{3} = inj_{2}^{A \times_{K}^{f,g} B} (A \times_{K}^{f,g} B),$$

$$i_{4} = inj_{2}^{A \times_{K}^{f,g} B} (A \times_{K}^{f,g} B),$$

$$i_{5} = inj_{5}^{A \times_{K}^{f,g} B} (A \times_{K}^{f,g} B),$$

$$i_{7} = inj_{1}^{A \times_{K}^{f,g} B} (A \times_{K}^{f,g} B),$$

$$i_{8} = inj_{1}^{A \times_{K}^{f,g} B} (A \times_{K}^{f,g} B),$$

$$i_{8} = inj_{1}^{A \times_{K}^{f,g} B} (A \times_{K}^{f,g} B),$$

$$i_{9} = inj_{1}^{A \times_{K}^{f,g} B} (A \times_{K}^{f,g} B),$$

$$i_{1} = inj_{1}^{A \times_{K}^{f,g} B} (A \times_{K}^{f,g} B),$$

$$i_{2} = inj_{2}^{A \times_{K}^{f,g} B} (A \times_{K}^{f,g} B),$$

$$i_{3} = inj_{1}^{A \times_{K}^{f,g} B} (A \times_{K}^{f,g} B),$$

$$i_{4} = inj_{1}^{A \times_{K}^{f,g} B} (A \times_{K}^{f,g} B),$$

$$i_{5} = inj_{5}^{A \times_{K}^{f,g} B} (A \times_{K}^{f,g} B),$$

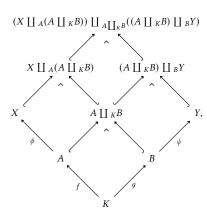

$$i_{7} = inj_{1}^{A \times_{K}^{f,g} B} (A \times_{K}^{f,g} B),$$

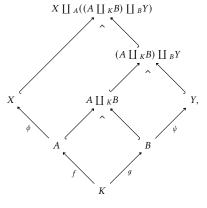

$$i_{8} = i$$

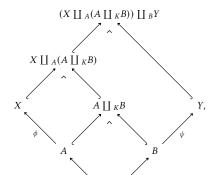

01F4

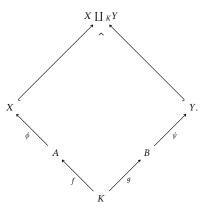

4.2.4 Pushouts 63

and where these pullbacks are built as in the diagrams

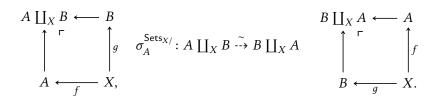

002H

5. Unitality. We have isomorphisms of sets

natural in $(A, f) \in \mathsf{Obj}(\mathsf{Sets}_{X/})$.

002J

6. Commutativity. We have an isomorphism of sets

natural in $(A, f), (B, q) \in Obj(Sets_{X/})$.

002K

7. Interaction With Coproducts. We have

$$A \coprod_{\emptyset} B \cong A \coprod B, \qquad \bigwedge^{\Gamma} \qquad \bigwedge^{\iota_{B}} A \longleftarrow_{\iota_{A}} \emptyset.$$

002L

8. *Symmetric Monoidality*. The triple ($\mathsf{Sets}_{X/}, \coprod_X, X$) is a symmetric monoidal category.

PROOF 4.2.4.1.9 ► PROOF OF PROPOSITION 4.2.4.1.8

Item 1: Functoriality

This is a special case of functoriality of co/limits, Limits and Colimits, ?? of ??, with the explicit expression for ξ following from the commutativity of the cube pushout diagram.

Item 2: : Adjointness

This follows from the universal property of the coproduct (pushouts are coproducts in $\mathsf{Sets}_{X/}$).

Item 3: Associativity

Omitted.

Item 4: Interaction With Composition Omitted. Item 5: Unitality Omitted. Item 6: Commutativity Omitted. Item 7: Interaction With Coproducts Omitted. Item 8: Symmetric Monoidality Omitted.

002M 4.2.5 Coequalisers

Let *A* and *B* be sets and let $f, g: A \Rightarrow B$ be functions.

002N DEFINITION 4.2.5.1.1 ► COEQUALISERS OF SETS

The **coequaliser of** f **and** g is the coequaliser of f and g in Sets as in Limits and Colimits, $\ref{Colombia}$.

01F5 CONSTRUCTION 4.2.5.1.2 ➤ CONSTRUCTION OF COEQUALISERS OF SETS

Concretely, the coequaliser of f and g is the pair $(\mathsf{CoEq}(f,g),\mathsf{coeq}(f,g))$ consisting of:

01F6 1. *The Colimit*. The set CoEq(f, q) defined by

$$CoEq(f, g) \stackrel{\text{def}}{=} B/\sim$$
,

where \sim is the equivalence relation on B generated by $f(a) \sim g(a)$.

01F7 2. *The Cocone*. The map

$$coeq(f,g): B \rightarrow CoEq(f,g)$$

given by the quotient map $\pi\colon B\twoheadrightarrow B/\sim$ with respect to the equivalence relation generated by $f(a)\sim g(a)$.

PROOF 4.2.5.1.3 ► PROOF OF CONSTRUCTION 4.2.5.1.2

We claim that $\mathrm{CoEq}(f,g)$ is the categorical coequaliser of f and g in Sets. First we need to check that the relevant coequaliser diagram commutes, i.e. that we have

$$coeq(f, g) \circ f = coeq(f, g) \circ g.$$

Indeed, we have

$$[\operatorname{coeq}(f,g) \circ f](a) \stackrel{\text{def}}{=} [\operatorname{coeq}(f,g)](f(a))$$

$$\stackrel{\text{def}}{=} [f(a)]$$

$$= [g(a)]$$

$$\stackrel{\text{def}}{=} [\operatorname{coeq}(f,g)](g(a))$$

$$\stackrel{\text{def}}{=} [\operatorname{coeq}(f,g) \circ g](a)$$

for each $a \in A$. Next, we prove that CoEq(f, g) satisfies the universal property of the coequaliser. Suppose we have a diagram of the form

$$A \xrightarrow{f} B \xrightarrow{\operatorname{coeq}(f,g)} \operatorname{CoEq}(f,g)$$

in Sets. Then, since c(f(a)) = c(g(a)) for each $a \in A$, it follows from Conditions on Relations, Items 4 and 5 of Proposition 10.6.2.1.3 that there exists a unique map $CoEq(f,g) \xrightarrow{\exists !} C$ making the diagram

$$A \xrightarrow{f} B \xrightarrow{\operatorname{coeq}(f,g)} \operatorname{CoEq}(f,g)$$

$$\downarrow g$$

$$\downarrow g$$

$$\downarrow g$$

$$\downarrow g$$

$$\downarrow g$$

commute.

See [Pro25z].

002S

PROPOSITION 4.2.5.1.7 ➤ PROPERTIES OF COEQUALISERS OF SETS

Let A, B, and C be sets.

002T

1. Associativity. We have isomorphisms of sets¹

$$\underbrace{ \underbrace{ \text{CoEq}(\text{coeq}(f,g) \circ f, \text{coeq}(f,g) \circ h)}_{= \text{CoEq}(\text{coeq}(f,g) \circ g, \text{coeq}(f,g) \circ h)} \cong \underbrace{ \text{CoEq}(\text{coeq}(g,h) \circ f, \text{coeq}(g,h) \circ g, \text{coeq}(g,h) \circ h)}_{= \text{CoEq}(\text{coeq}(g,h) \circ f, \text{coeq}(g,h) \circ h)}$$

where CoEq(f, g, h) is the colimit of the diagram

$$A \xrightarrow{f \atop b} B$$

in Sets.

002U

2. Unitality. We have an isomorphism of sets

$$CoEq(f, f) \cong B$$
.

002V

3. Commutativity. We have an isomorphism of sets

$$CoEq(f, g) \cong CoEq(g, f)$$
.

002W

4. Interaction With Composition. Let

$$A \stackrel{f}{\underset{g}{\Longrightarrow}} B \stackrel{h}{\underset{k}{\Longrightarrow}} C$$

be functions. We have a surjection

$$CoEq(h \circ f, k \circ g) \twoheadrightarrow CoEq(coeq(h, k) \circ h \circ f, coeq(h, k) \circ k \circ g)$$

exhibiting $CoEq(coeq(h,k) \circ h \circ f, coeq(h,k) \circ k \circ g)$ as a quotient of $CoEq(h \circ f, k \circ g)$ by the relation generated by declaring $h(y) \sim k(y)$ for each $y \in B$.

 1 That is, the following three ways of forming "the" coequaliser of (f,g,h) agree:

(a) Take the coequaliser of (f, g, h), i.e. the colimit of the diagram

$$A \xrightarrow{f \atop g \atop h} B$$

in Sets.

(b) First take the coequaliser of f and g, forming a diagram

$$A \stackrel{f}{\underset{q}{\Longrightarrow}} B \stackrel{\text{coeq}(f,g)}{\twoheadrightarrow} \text{CoEq}(f,g)$$

and then take the coequaliser of the composition

$$A \stackrel{f}{\Longrightarrow} B \stackrel{\text{coeq}(f,g)}{\Longrightarrow} \text{CoEq}(f,g),$$

obtaining a quotient

$$\label{eq:coeq} \begin{aligned} \mathsf{CoEq}(\mathsf{coeq}(f,g) \circ f, \mathsf{coeq}(f,g) \circ h) &= \mathsf{CoEq}(\mathsf{coeq}(f,g) \circ g, \mathsf{coeq}(f,g) \circ h) \\ &\quad \mathsf{of}\, \mathsf{CoEq}(f,g) \end{aligned}$$

0205 (c) First take the coequaliser of g and h, forming a diagram

$$A \stackrel{g}{\Longrightarrow} B \stackrel{\operatorname{coeq}(g,h)}{\twoheadrightarrow} \operatorname{CoEq}(g,h)$$

and then take the coequaliser of the composition

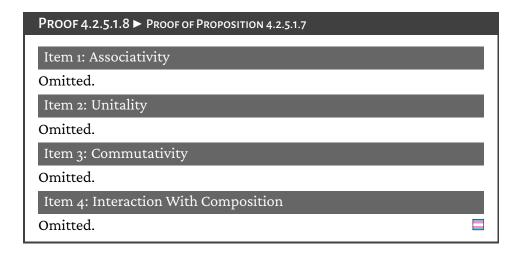

$$A \stackrel{f}{\underset{g}{\Longrightarrow}} B \stackrel{\operatorname{coeq}(g,h)}{\twoheadrightarrow} \operatorname{CoEq}(g,h),$$

obtaining a quotient

 $\begin{aligned} \operatorname{CoEq}(\operatorname{coeq}(g,h) \circ f, \operatorname{coeq}(g,h) \circ g) &= \operatorname{CoEq}(\operatorname{coeq}(g,h) \circ f, \operatorname{coeq}(g,h) \circ h) \\ & \text{of } \operatorname{CoEq}(g,h). \end{aligned}$

0203

0204

01F8 4.2.6 Direct Colimits

Let $(X_{\alpha}, f_{\alpha\beta})_{\alpha,\beta\in I} \colon (I, \preceq) \to \mathbb{T}$ be a direct system of sets.

01F9 DEFINITION 4.2.6.1.1 ► DIRECT COLIMITS OF SETS

The **direct colimit of** $(X_{\alpha}, f_{\alpha\beta})_{\alpha,\beta\in I}$ is the direct colimit of $(X_{\alpha}, f_{\alpha\beta})_{\alpha,\beta\in I}$ in Sets as in Limits and Colimits, ??.

01FA CONSTRUCTION 4.2.6.1.2 ➤ CONSTRUCTION OF DIRECT COLIMITS OF SETS

Concretely, the direct colimit of $(X_{\alpha}, f_{\alpha\beta})_{\alpha,\beta\in I}$ is the pair $\left(\begin{array}{c} \operatorname{colim}(X_{\alpha}), \\ \overrightarrow{\inf_{\alpha\in I}} \end{array}\right)$ consisting of:

01FB 1. *The Colimit*. The set $\operatornamewithlimits{colim}_{\alpha \in I}(X_{\alpha})$ defined by

$$\underset{\alpha \in I}{\operatorname{colim}}(X_{\alpha}) \stackrel{\operatorname{def}}{=} \left(\left[\prod_{\alpha \in I} X_{\alpha} \right] \right) / \sim,$$

where \sim is the equivalence relation on $\coprod_{\alpha \in I} X_{\alpha}$ generated by declaring $(\alpha, x) \sim (\beta, y)$ iff there exists some $\gamma \in I$ satisfying the following conditions:

01FC

(a) We have $\alpha \leq \gamma$.

01FD

(b) We have $\beta \leq \gamma$.

01FE

(c) We have $f_{\alpha \gamma}(x) = f_{\beta \gamma}(y)$.

01FF

2. The Cocone. The collection

$$\left\{\operatorname{inj}_{\gamma} \colon X_{\gamma} \to \underset{\alpha \in I}{\operatorname{colim}}(X_{\alpha})\right\}_{\gamma \in I}$$

of maps of sets defined by

$$\operatorname{inj}_{\gamma}(x) \stackrel{\text{def}}{=} [(\gamma, x)]$$

for each $\gamma \in I$ and each $x \in X_{\gamma}$.

PROOF 4.2.6.1.3 ► PROOF OF CONSTRUCTION 4.2.6.1.2

We will prove Construction 4.2.6.1.2 below in a bit, but first we need a lemma (which is interesting in its own right).

01FG

LEMMA 4.2.6.1.4 \blacktriangleright **IDENTIFICATION OF** x **WITH** $f_{\alpha\beta}(x)$ **IN DIRECT COLIMITS**

For each α , $\beta \in I$ and each $x \in X_{\alpha}$, if $\alpha \leq \beta$, then we have

$$(\alpha, x) \sim (\beta, f_{\alpha\beta}(x))$$

in $\underset{\alpha \in I}{\overset{\longrightarrow}{colim}}(X_{\alpha})$.

PROOF 4.2.6.1.5 ► PROOF OF LEMMA 4.2.6.1.4

Taking $\gamma=\beta$, we have $f_{\alpha\gamma}=f_{\alpha\beta}$, we have $f_{\beta\gamma}=f_{\beta\beta}\stackrel{\mathrm{def}}{=}\mathrm{id}_{X_\beta}$, and we have

$$f_{\alpha\beta}(x) = f_{\beta\beta}(f_{\alpha\beta}(x))$$

$$\stackrel{\text{def}}{=} \mathrm{id}_{X_{\beta}}(f_{\alpha\beta}(x)),$$

$$= f_{\alpha\beta}(x).$$

As a result, since $\alpha \leq \beta$ and $\beta \leq \beta$ as well, Items 1a to 1c of Construction 4.2.6.1.2 are met. Thus we have $(\alpha, x) \sim (\beta, f_{\alpha\beta}(x))$.

We can now prove Construction 4.2.6.1.2:

PROOF 4.2.6.1.6 ► PROOF OF CONSTRUCTION 4.2.6.1.2

We claim that colim (X_{α}) is the colimit of the direct system of sets $(X_{\alpha}, f_{\alpha\beta})_{\alpha,\beta\in I}$.

Commutativity of the Colimit Diagram

First, we need to check that the colimit diagram defined by colim $\underset{\alpha \in I}{\longrightarrow} (X_{\alpha})$ commutes, i.e. that we have

$$\operatorname{inj}_{\alpha} = \operatorname{inj}_{\beta} \circ f_{\alpha\beta}, \qquad \underbrace{\operatorname{colim}_{\alpha \in I}(X_{\alpha})}_{\operatorname{inj}_{\alpha}} \xrightarrow{\operatorname{inj}_{\beta}} X_{\beta}$$

for each $\alpha, \beta \in I$ with $\alpha \leq \beta$. Indeed, given $x \in X_{\alpha}$, we have

$$[\inf_{\beta} \circ f_{\alpha\beta}](x) \stackrel{\text{def}}{=} \inf_{\beta} (f_{\alpha\beta}(x))$$

$$\stackrel{\text{def}}{=} [(\beta, f_{\alpha\beta}(x))]$$

$$= [(\alpha, x)]$$

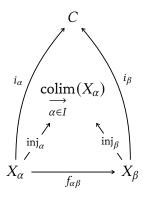

$$\stackrel{\text{def}}{=} \inf_{\alpha} (x),$$

where we have used Lemma 4.2.6.1.4 for the third equality.

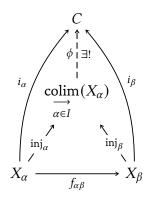

Proof of the Universal Property of the Colimit

Next, we prove that colim $\underset{\alpha \in I}{\longrightarrow} (X_{\alpha})$ as constructed in Construction 4.2.6.1.2

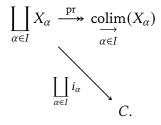

satisfies the universal property of a direct colimit. Suppose that we have, for each $\alpha, \beta \in I$ with $\alpha \leq \beta$, a diagram of the form

in Sets. We claim that there exists a unique map $\phi\colon \operatornamewithlimits{colim}_{\alpha\in I}(X_\alpha)\stackrel{\exists!}{\longrightarrow} C$ making the diagram

commute. To this end, first consider the diagram

Lemma. If $(\alpha, x) \sim (\beta, y)$, then we have

$$\left[\bigsqcup_{\alpha \in I} i_{\alpha} \right](x) = \left[\bigsqcup_{\alpha \in I} i_{\alpha} \right](y).$$

Proof. Indeed, if $(\alpha, x) \sim (\beta, y)$, then there exists some $y \in I$ satisfying the following conditions:

1. We have $\alpha \leq \gamma$.

2. We have $\beta \leq \gamma$.

3. We have $f_{\alpha \gamma}(x) = f_{\beta \gamma}(y)$.

We then have

$$\left[\bigsqcup_{\alpha \in I} i_{\alpha} \right](x) \stackrel{\text{def}}{=} i_{\alpha}(x)$$

$$\stackrel{\text{def}}{=} [i_{\gamma} \circ f_{\alpha \gamma}](x)$$

$$\stackrel{\text{def}}{=} i_{\gamma} (f_{\alpha \gamma}(x))$$

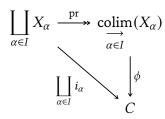

$$= i_{\gamma} (f_{\beta \gamma}(x))$$

$$\stackrel{\text{def}}{=} [i_{\gamma} \circ f_{\beta \gamma}](x)$$

$$= i_{\beta}(y)$$

$$\stackrel{\text{def}}{=} \left[\bigsqcup_{\alpha \in I} i_{\alpha} \right](y).$$

This finishes the proof of the lemma. Continuing, by Conditions on Relations, ?? of Proposition 10.6.2.1.3, there then exists a map $\phi : \underset{\longrightarrow}{\operatorname{colim}}(X_{\alpha}) \xrightarrow{\exists !} C$ making the diagram α∈*I*

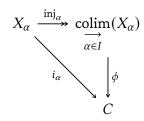

0206

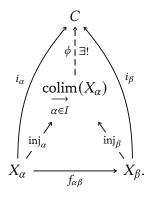

0207

0208

commute. In particular, this implies that the diagram

also commutes, and thus so does the diagram

This finishes the proof.1

¹Incidentally, the conditions

$$\left\{i_{\alpha} = \phi \circ \operatorname{inj}_{\alpha}\right\}_{\alpha \in I}$$

show that ϕ must be given by

$$\phi([(\alpha, x)]) = (i_{\alpha}(x))_{\alpha \in I}$$

for each $[(\alpha,x)] \in \operatorname{colim}_{\alpha \in I}(X_{\alpha})$, although we would need to show that this assignment is well-defined were we to prove Construction 4.2.6.1.2 in this way. Instead, invoking Conditions on Relations, ?? of Proposition 10.6.2.1.3 gave us a way to avoid having to prove this, leading to a cleaner alternative proof.

©1FH EXAMPLE 4.2.6.1.7 ► EXAMPLES OF DIRECT COLIMITS OF SETS

Here are some examples of direct colimits of sets.

01FJ 1. The Prüfer Group. The Prüfer group $\mathbb{Z}(p^\infty)$ is defined as the direct colimit

$$\mathbb{Z}(p^{\infty})\stackrel{\mathrm{def}}{=} \underset{n\in\mathbb{N}}{\operatorname{colim}}(\mathbb{Z}_{/p^n});$$

see??.

002X 4.3 Operations With Sets

002Y 4.3.1 The Empty Set

002Z DEFINITION 4.3.1.1.1 ► THE EMPTY SET

The **empty set** is the set \emptyset defined by

$$\emptyset \stackrel{\text{def}}{=} \{ x \in X \mid x \neq x \},\$$

where X is the set in the set existence axiom, ?? of ??.

0030 4.3.2 Singleton Sets

Let X be a set.

0031 DEFINITION 4.3.2.1.1 ➤ SINGLETON SETS

The **singleton set containing** X is the set $\{X\}$ defined by

$$\{X\} \stackrel{\text{def}}{=} \{X, X\},$$

where $\{X, X\}$ is the pairing of X with itself of Definition 4.3.3.1.1.

0032 4.3.3 Pairings of Sets

Let *X* and *Y* be sets.

The **pairing of** X **and** Y is the set $\{X, Y\}$ defined by

$${X, Y} \stackrel{\text{def}}{=} {x \in A \mid x = X \text{ or } x = Y},$$

where A is the set in the axiom of pairing, ?? of ??.

0034 4.3.4 Ordered Pairs

Let A and B be sets.

0035 DEFINITION 4.3.4.1.1 ➤ ORDERED PAIRS

The **ordered pair associated to** A **and** B is the set (A, B) defined by

$$(A, B) \stackrel{\text{def}}{=} \{ \{A\}, \{A, B\} \}.$$

0036 PROPOSITION 4.3.4.1.2 ➤ PROPERTIES OF ORDERED PAIRS

Let *A* and *B* be sets.

0037

0038

0039

- 1. *Uniqueness*. Let A, B, C, and D be sets. The following conditions are equivalent:
 - (a) We have (A, B) = (C, D).
- (b) We have A = C and B = D.

PROOF 4.3.4.1.3 ► PROOF OF PROPOSITION 4.3.4.1.2

Item 1: Uniqueness

See [Cie97, Theorem 1.2.3].

003A 4.3.5 Sets of Maps

Let *A* and *B* be sets.

003B DEFINITION 4.3.5.1.1 ► SETS OF MAPS

The **set of maps from** A **to** B^1 is the set $Sets(A, B)^2$ whose elements are the functions from A to B.

003C PROPOSITION 4.3.5.1.2 ➤ PROPERTIES OF SETS OF MAPS

Let A and B be sets.

1. Functoriality. The assignments $X, Y, (X, Y) \mapsto \operatorname{Hom}_{\mathsf{Sets}}(X, Y)$ define functors

$$\begin{array}{lll} \mathsf{Sets}(X,-)\colon & \mathsf{Sets} & \to \mathsf{Sets}, \\ \mathsf{Sets}(-,Y)\colon & \mathsf{Sets}^\mathsf{op} & \to \mathsf{Sets}, \\ \mathsf{Sets}(-_1,-_2)\colon \mathsf{Sets}^\mathsf{op} \times \mathsf{Sets} \to \mathsf{Sets}. \end{array}$$

2. Adjointness. We have adjunctions

$$(A \times - + \operatorname{Sets}(A, -))$$
: Sets $\xrightarrow{A \times -}$ Sets, $(- \times B + \operatorname{Sets}(B, -))$: Sets $\xrightarrow{- \times B}$ Sets, $(- \times B + \operatorname{Sets}(B, -))$

witnessed by bijections

$$Sets(A \times B, C) \cong Sets(A, Sets(B, C)),$$

 $Sets(A \times B, C) \cong Sets(B, Sets(A, C)),$

natural in $A, B, C \in Obj(Sets)$.

3. Maps From the Punctual Set. We have a bijection

$$Sets(pt, A) \cong A$$
,

natural in $A \in Obj(Sets)$.

01FL

01FK

003D

¹Further Terminology: Also called the **Hom set from** A **to** B.

² Further Notation: Also written $Hom_{Sets}(A, B)$.

01FM

4. Maps to the Punctual Set. We have a bijection

$$Sets(A, pt) \cong pt$$
,

natural in $A \in Obj(Sets)$.

PROOF 4.3.5.1.3 ► PROOF OF PROPOSITION 4.3.5.1.2

Item 1: Functoriality

This follows from Categories, Items 2 and 5 of Proposition 11.1.4.1.2.

Item 2: Adjointness

This is a repetition of Item 2 of Proposition 4.1.3.1.4 and is proved there.

Item 3: Maps From the Punctual Set

The bijection

$$\Phi_A \colon \mathsf{Sets}(\mathsf{pt},A) \xrightarrow{\sim} A$$

is given by

$$\Phi_A(f) \stackrel{\text{def}}{=} f(\star)$$

for each $f \in Sets(pt, A)$, admitting an inverse

$$\Phi_A^{-1} \colon A \xrightarrow{\sim} \mathsf{Sets}(\mathsf{pt}, A)$$

given by

$$\Phi_A^{-1}(a) \stackrel{\text{def}}{=} \llbracket \star \mapsto a \rrbracket$$

for each $a \in A$. Indeed, we have

$$\begin{split} [\Phi_A^{-1} \circ \Phi_A](f) &\stackrel{\text{def}}{=} \Phi_A^{-1}(\Phi_A(f)) \\ &\stackrel{\text{def}}{=} \Phi_A^{-1}(f(\star)) \\ &\stackrel{\text{def}}{=} \llbracket \star \mapsto f(\star) \rrbracket \\ &\stackrel{\text{def}}{=} f \\ &\stackrel{\text{def}}{=} [\operatorname{id}_{\mathsf{Sets}(\mathsf{pt},A)}](f) \end{split}$$

for each $f \in Sets(pt, A)$ and

$$[\Phi_A \circ \Phi_A^{-1}](a) \stackrel{\text{def}}{=} \Phi_A(\Phi_A^{-1}(a))$$

$$\stackrel{\text{def}}{=} \Phi_A([\![\star \mapsto a]\!])$$

$$\stackrel{\text{def}}{=} \text{ev}_{\star}([\![\star \mapsto a]\!])$$

$$\stackrel{\text{def}}{=} a$$

$$\stackrel{\text{def}}{=} [\text{id}_A](a)$$

for each $a \in A$, and thus we have

$$\Phi_A^{-1} \circ \Phi_A = \mathrm{id}_{\mathsf{Sets}(\mathsf{pt},A)}$$

$$\Phi_A \circ \Phi_A^{-1} = \mathrm{id}_A.$$

To prove naturality, we need to show that the diagram

$$\begin{array}{ccc}
\operatorname{Sets}(\operatorname{pt},A) & \xrightarrow{f} & \operatorname{Sets}(\operatorname{pt},B) \\
& & \downarrow \\
\Phi_{A} & \downarrow \\
A & \xrightarrow{f} & B
\end{array}$$

commutes. Indeed, we have

$$[f \circ \Phi_A](\phi) \stackrel{\text{def}}{=} f(\Phi_A(\phi))$$

$$\stackrel{\text{def}}{=} f(\phi(\star))$$

$$\stackrel{\text{def}}{=} [f \circ \phi](\star)$$

$$\stackrel{\text{def}}{=} \Phi_B(f \circ \phi)$$

$$\stackrel{\text{def}}{=} \Phi_B(f!(\phi))$$

$$\stackrel{\text{def}}{=} [\Phi_B \circ f!](\phi)$$

for each $\phi \in \mathsf{Sets}(\mathsf{pt},A)$. This finishes the proof.

Item 4: Maps to the Punctual Set

This follows from the universal property of pt as the terminal set, Definition 4.1.1.1.1.

003E 4.3.6 Unions of Families of Subsets

Let X be a set and let $\mathcal{U} \in \mathcal{P}(\mathcal{P}(X))$.

003F DEFINITION 4.3.6.1.1 ► Unions of Families of Subsets

The **union of** \mathcal{U} is the set $\bigcup_{U \in \mathcal{U}} U$ defined by

$$\bigcup_{U \in \mathcal{U}} U \stackrel{\text{def}}{=} \left\{ x \in X \,\middle|\, \begin{array}{l} \text{there exists some } U \in \mathcal{U} \\ \text{such that we have } x \in U \end{array} \right\}.$$

PROPOSITION 4.3.6.1.2 ▶ PROPERTIES OF UNIONS OF FAMILIES OF SUBSETS

Let X be a set.

01FP

01FQ

1. Functoriality. The assignment $\mathcal{U}\mapsto \bigcup_{U\in\mathcal{U}}U$ defines a functor

$$[\quad]: (\mathcal{P}(\mathcal{P}(X)), \subset) \to (\mathcal{P}(X), \subset).$$

In particular, for each $\mathcal{U}, \mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$, the following condition is satisfied:

$$(\star) \quad \text{If } \mathcal{U} \subset \mathcal{V} \text{, then } \bigcup_{U \in \mathcal{U}} U \subset \bigcup_{V \in \mathcal{V}} V.$$

2. Associativity. The diagram

$$\begin{array}{ccc}
\mathcal{P}(\mathcal{P}(\mathcal{P}(X))) & \xrightarrow{\mathrm{id}_{\mathcal{P}(X)} \star \bigcup} & \mathcal{P}(\mathcal{P}(X)) \\
\cup \star \mathrm{id}_{\mathcal{P}(X)} & & & & \bigcup \\
\mathcal{P}(\mathcal{P}(X)) & \xrightarrow{\qquad \qquad } & \mathcal{P}(X)
\end{array}$$

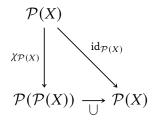

commutes, i.e. we have

$$\bigcup_{U \in \bigcup_{A \in \mathcal{A}} A} U = \bigcup_{A \in \mathcal{A}} (\bigcup_{U \in A} U)$$

for each $A \in \mathcal{P}(\mathcal{P}(\mathcal{P}(X)))$.

01FR

3. Left Unitality. The diagram

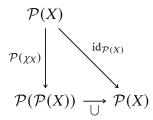

commutes, i.e. we have

$$\bigcup_{V \in \{U\}} V = U$$

for each $U \in \mathcal{P}(X)$.

01FS

4. Right Unitality. The diagram

commutes, i.e. we have

$$\bigcup_{\{u\}\in\chi_X(U)}\{u\}=U$$

for each $U \in \mathcal{P}(X)$.

01FT

5. Interaction With Unions I. The diagram

$$\mathcal{P}(\mathcal{P}(X)) \times \mathcal{P}(\mathcal{P}(X)) \xrightarrow{\cup} \mathcal{P}(\mathcal{P}(X))$$

$$\cup \times \cup \downarrow \qquad \qquad \downarrow \cup$$

$$\mathcal{P}(X) \times \mathcal{P}(X) \xrightarrow{\cup} \mathcal{P}(X)$$

commutes, i.e. we have

$$\bigcup_{W \in \mathcal{U} \cup \mathcal{V}} W = \left(\bigcup_{U \in \mathcal{U}} U\right) \cup \left(\bigcup_{V \in \mathcal{V}} V\right)$$

for each $\mathcal{U}, \mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$.

01FU 6. *Interaction With Unions II*. The diagrams

commute, i.e. we have

$$U \cup \left(\bigcup_{V \in \mathcal{V}} V\right) = \bigcup_{V \in \mathcal{V}} (U \cup V),$$
$$\left(\bigcup_{U \in \mathcal{U}} U\right) \cup V = \bigcup_{U \in \mathcal{U}} (U \cup V)$$

for each nonempty $\mathcal{U}, \mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$ and each $U, V \in \mathcal{P}(X)$.

7. Interaction With Intersections I. We have a natural transformation

$$\mathcal{P}(\mathcal{P}(X)) \times \mathcal{P}(\mathcal{P}(X)) \xrightarrow{\cap} \mathcal{P}(\mathcal{P}(X))$$

$$\cup \times \cup \downarrow \qquad \qquad \qquad \bigcup \cup$$

$$\mathcal{P}(X) \times \mathcal{P}(X) \xrightarrow{\cap} \mathcal{P}(X),$$

with components

01FV

$$\bigcup_{W \in \mathcal{U} \cap \mathcal{V}} W \subset \left(\bigcup_{U \in \mathcal{U}} U\right) \cap \left(\bigcup_{V \in \mathcal{V}} V\right)$$

for each $\mathcal{U}, \mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$.

01FW

8. Interaction With Intersections II. The diagrams

$$\mathcal{P}(\mathcal{P}(X)) \xrightarrow{\operatorname{id}_{\mathcal{P}(\mathcal{P}(X))} \times (U \cap -)} \mathcal{P}(\mathcal{P}(X)) \qquad \mathcal{P}(\mathcal{P}(X)) \xrightarrow{\operatorname{id}_{\mathcal{P}(\mathcal{P}(X))} \times (-\cap V)} \mathcal{P}(\mathcal{P}(X))$$

$$\bigcup \qquad \qquad \bigcup \qquad$$

commute, i.e. we have

$$U \cap \left(\bigcup_{V \in \mathcal{V}} V\right) = \bigcup_{V \in \mathcal{V}} (U \cap V),$$
$$\left(\bigcup_{U \in \mathcal{U}} U\right) \cap V = \bigcup_{U \in \mathcal{U}} (U \cap V)$$

for each $U, V \in \mathcal{P}(\mathcal{P}(X))$ and each $U, V \in \mathcal{P}(X)$.

01FX

9. Interaction With Differences. The diagram

$$\mathcal{P}(\mathcal{P}(X)) \times \mathcal{P}(\mathcal{P}(X)) \xrightarrow{\setminus} \mathcal{P}(\mathcal{P}(X))$$

$$\cup \times \cup \downarrow \qquad \qquad \downarrow \cup$$

$$\mathcal{P}(X) \times \mathcal{P}(X) \xrightarrow{\setminus} \mathcal{P}(X),$$

does not commute in general, i.e. we may have

$$\bigcup_{W \in \mathcal{U} \setminus \mathcal{V}} W \neq \left(\bigcup_{U \in \mathcal{U}} U\right) \setminus \left(\bigcup_{V \in \mathcal{V}} V\right)$$

in general, where $\mathcal{U}, \mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$.

01FY

10. Interaction With Complements I. The diagram

$$\mathcal{P}(\mathcal{P}(X))^{\operatorname{op}} \xrightarrow{(-)^{\operatorname{c}}} \mathcal{P}(\mathcal{P}(X))$$

$$\downarrow^{\operatorname{op}} \qquad \qquad \downarrow \cup$$

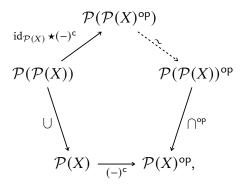

$$\mathcal{P}(X)^{\operatorname{op}} \xrightarrow{(-)^{\operatorname{c}}} \mathcal{P}(X),$$

does not commute in general, i.e. we may have

$$\bigcup_{U \in \mathcal{U}^{\mathsf{c}}} U \neq \bigcup_{U \in \mathcal{U}} U^{\mathsf{c}}$$

in general, where $\mathcal{U} \in \mathcal{P}(\mathcal{P}(X))$.

11. Interaction With Complements II. The diagram

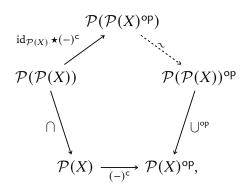

commutes, i.e. we have

$$\left(\bigcup_{U\in\mathcal{U}}U\right)^{\mathsf{c}}=\bigcap_{U\in\mathcal{U}}U^{\mathsf{c}}$$

for each $\mathcal{U} \in \mathcal{P}(\mathcal{P}(X))$.

12. Interaction With Complements III. The diagram

01FZ

01G0

01G1

commutes, i.e. we have

$$\left(\bigcap_{U\in\mathcal{U}}U\right)^{\mathsf{c}}=\bigcup_{U\in\mathcal{U}}U^{\mathsf{c}}$$

for each $\mathcal{U} \in \mathcal{P}(\mathcal{P}(X))$.

13. Interaction With Symmetric Differences. The diagram

$$\begin{array}{c|c} \mathcal{P}(\mathcal{P}(X)) \times \mathcal{P}(\mathcal{P}(X)) & \stackrel{\triangle}{\longrightarrow} & \mathcal{P}(\mathcal{P}(X)) \\ & & \swarrow & & \downarrow \cup \\ & \mathcal{P}(X) \times \mathcal{P}(X) & \xrightarrow{\quad \land \quad} & \mathcal{P}(X), \end{array}$$

does not commute in general, i.e. we may have

$$\bigcup_{W \in \mathcal{U} \triangle \mathcal{V}} W \neq \left(\bigcup_{U \in \mathcal{U}} U\right) \triangle \left(\bigcup_{V \in \mathcal{V}} V\right)$$

in general, where $\mathcal{U}, \mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$.

01G2 14. Interaction With Internal Homs I. The diagram

$$\mathcal{P}(\mathcal{P}(X))^{\text{op}} \times \mathcal{P}(\mathcal{P}(X)) \xrightarrow{[-1,-2]_{\mathcal{P}(X)}} \mathcal{P}(\mathcal{P}(X))$$

$$\cup^{\text{op}} \times \cup^{\text{op}} \qquad \qquad \bigcup \cup$$

$$\mathcal{P}(X)^{\text{op}} \times \mathcal{P}(X) \xrightarrow{[-1,-2]_X} \mathcal{P}(X),$$

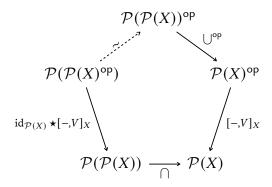

does not commute in general, i.e. we may have

$$\bigcup_{W \in [\mathcal{U}, \mathcal{V}]_{\mathcal{P}(X)}} W \neq \left[\bigcup_{U \in \mathcal{U}} U, \bigcup_{V \in \mathcal{V}} V\right]_X$$

in general, where $\mathcal{U} \in \mathcal{P}(\mathcal{P}(X))$.

01G3

15. Interaction With Internal Homs II. The diagram

commutes, i.e. we have

$$\left[\bigcup_{U\in\mathcal{U}}U,V\right]_X=\bigcap_{U\in\mathcal{U}}[U,V]_X$$

for each $U \in \mathcal{P}(\mathcal{P}(X))$ and each $V \in \mathcal{P}(X)$.

01G4

16. Interaction With Internal Homs III. The diagram

$$\begin{array}{ccc}
\mathcal{P}(\mathcal{P}(X)) & \stackrel{\bigcup}{\longrightarrow} \mathcal{P}(X) \\
\downarrow^{\mathrm{id}_{\mathcal{P}(X)} \star [U,-]_X} & & \downarrow^{[U,-]_X} \\
\mathcal{P}(\mathcal{P}(X)) & \stackrel{\bigcup}{\longrightarrow} \mathcal{P}(X)
\end{array}$$

commutes, i.e. we have

$$\left[U, \bigcup_{V \in \mathcal{V}} V\right]_X = \bigcup_{V \in \mathcal{V}} [U, V]_X$$

for each $U \in \mathcal{P}(X)$ and each $\mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$.

01G5

17. Interaction With Direct Images. Let $f: X \to Y$ be a map of sets. The

diagram

$$\mathcal{P}(\mathcal{P}(X)) \xrightarrow{(f_{!})_{!}} \mathcal{P}(\mathcal{P}(Y))$$

$$\bigcup \qquad \qquad \bigcup \qquad \qquad \bigcup$$

$$\mathcal{P}(X) \xrightarrow{f_{!}} \mathcal{P}(Y)$$

commutes, i.e. we have

$$\bigcup_{U \in \mathcal{U}} f_!(U) = \bigcup_{V \in f_!(\mathcal{U})} V$$

for each $\mathcal{U} \in \mathcal{P}(X)$, where $f_!(\mathcal{U}) \stackrel{\text{def}}{=} (f_!)_!(\mathcal{U})$.

18. Interaction With Inverse Images. Let $f: X \to Y$ be a map of sets. The diagram

$$\mathcal{P}(\mathcal{P}(Y)) \xrightarrow{(f^{-1})^{-1}} \mathcal{P}(\mathcal{P}(X))$$

$$\bigcup_{U} \qquad \qquad \bigcup_{U} \qquad \qquad \mathcal{P}(Y) \xrightarrow{f^{-1}} \mathcal{P}(X)$$

commutes, i.e. we have

$$\bigcup_{V\in\mathcal{V}} f^{-1}(V) = \bigcup_{U\in f^{-1}(\mathcal{U})} U$$

for each $V \in \mathcal{P}(Y)$, where $f^{-1}(V) \stackrel{\text{def}}{=} (f^{-1})^{-1}(V)$.

19. Interaction With Codirect Images. Let $f: X \to Y$ be a map of sets. The diagram

$$\mathcal{P}(\mathcal{P}(X)) \xrightarrow{(f_*)_*} \mathcal{P}(\mathcal{P}(Y))$$

$$\bigcup_{f_*} \bigcup_{f_*} \bigcup_{f_*} \mathcal{P}(Y)$$

01G6

01G7

01G8

01G9

commutes, i.e. we have

$$\bigcup_{U \in \mathcal{U}} f_*(U) = \bigcup_{V \in f_*(\mathcal{U})} V$$

for each $\mathcal{U} \in \mathcal{P}(X)$, where $f_*(\mathcal{U}) \stackrel{\text{def}}{=} (f_*)_*(\mathcal{U})$.

20. Interaction With Intersections of Families I. The diagram

$$\begin{array}{c|c}
\mathcal{P}(\mathcal{P}(X)) & \xrightarrow{\mathrm{id}_{\mathcal{P}(X)} \star \cap} & \mathcal{P}(\mathcal{P}(x)) \\
\downarrow \star \mathrm{id}_{\mathcal{P}(X)} & & & \downarrow \cap \\
\mathcal{P}(X) & \xrightarrow{\bigcap} & X
\end{array}$$

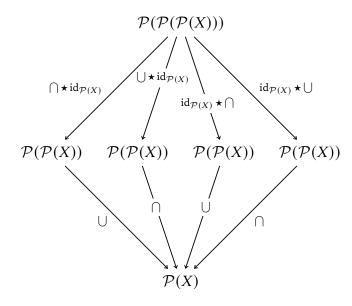

commutes, i.e. we have

$$\bigcap_{U \in \bigcup_{A \in \mathcal{A}} A} U = \bigcap_{A \in \mathcal{A}} \left(\bigcap_{U \in A} U \right)$$

for each $A \in \mathcal{P}(\mathcal{P}(X))$.

21. Interaction With Intersections of Families II. Let X be a set and con-

sider the compositions

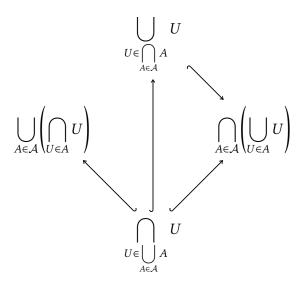

given by

$$\mathcal{A} \mapsto \bigcup_{U \in \bigcap_{A \in \mathcal{A}} A} U, \quad \mathcal{A} \mapsto \bigcap_{U \in \bigcup_{A \in \mathcal{A}} A} U,$$

$$\mathcal{A} \mapsto \bigcup_{A \in \mathcal{A}} \left(\bigcap_{U \in A} U\right), \quad \mathcal{A} \mapsto \bigcap_{A \in \mathcal{A}} \left(\bigcup_{U \in A} U\right)$$

for each $A \in \mathcal{P}(\mathcal{P}(X))$). We have the following inclusions:

All other possible inclusions fail to hold in general.

PROOF 4.3.6.1.3 ► PROOF OF PROPOSITION 4.3.6.1.2

Item 1: Functoriality

Since $\mathcal{P}(X)$ is posetal, it suffices to prove the condition (\star) . So let $\mathcal{U}, \mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$ with $\mathcal{U} \subset \mathcal{V}$. We claim that

$$\bigcup_{U\in\mathcal{U}}U\subset\bigcup_{V\in\mathcal{V}}V.$$

Indeed, given $x \in \bigcup_{U \in \mathcal{U}} U$, there exists some $U \in \mathcal{U}$ such that $x \in U$, but since $\mathcal{U} \subset \mathcal{V}$, we have $U \in \mathcal{V}$ as well, and thus $x \in \bigcup_{V \in \mathcal{V}} V$, which gives our desired inclusion.

Item 2: Associativity

We have

$$\bigcup_{U \in \bigcup_{A \in \mathcal{A}} A} U \stackrel{\text{def}}{=} \left\{ x \in X \middle| \text{ there exists some } U \in \bigcup_{A \in \mathcal{A}} A \right\} \\
\text{such that we have } x \in U$$

$$= \left\{ x \in X \middle| \text{ there exists some } A \in \mathcal{A} \\
\text{and some } U \in A \text{ such that } \right\} \\
\text{we have } x \in U$$

$$= \left\{ x \in X \middle| \text{ there exists some } A \in \mathcal{A} \\
\text{such that we have } x \in \bigcup_{U \in A} U \right\}$$

$$\stackrel{\text{def}}{=} \bigcup_{A \in \mathcal{A}} \left(\bigcup_{U \in A} U \right).$$

This finishes the proof.

Item 3: Left Unitality

We have

$$\bigcup_{V \in \{U\}} V \stackrel{\text{def}}{=} \left\{ x \in X \middle| \begin{array}{l} \text{there exists some } V \in \{U\} \\ \text{such that we have } x \in U \end{array} \right\}$$
$$= \left\{ x \in X \mid x \in U \right\}$$
$$= U.$$

This finishes the proof.

Item 4: Right Unitality

We have

$$\bigcup_{\{u\} \in \chi_X(U)} \{u\} \stackrel{\text{def}}{=} \left\{ x \in X \,\middle|\, \begin{array}{l} \text{there exists some } \{u\} \in \chi_X(U) \\ \text{such that we have } x \in \{u\} \end{array} \right\}$$

$$= \begin{cases} x \in X & \text{there exists some } \{u\} \in \chi_X(U) \\ \text{such that we have } x = u \end{cases}$$

$$= \begin{cases} x \in X & \text{there exists some } u \in U \\ \text{such that we have } x = u \end{cases}$$

$$= \{ x \in X \mid x \in U \}$$

$$= U.$$

This finishes the proof.

Item 5: Interaction With Unions I

We have

$$\bigcup_{W \in \mathcal{U} \cup \mathcal{V}} W \stackrel{\text{def}}{=} \left\{ x \in X \middle| \begin{array}{l} \text{there exists some } W \in \mathcal{U} \cup \mathcal{V} \\ \text{such that we have } x \in W \end{array} \right\}$$

$$= \left\{ x \in X \middle| \begin{array}{l} \text{there exists some } W \in \mathcal{U} \text{ or some} \\ W \in \mathcal{V} \text{ such that we have } x \in W \end{array} \right\}$$

$$\stackrel{\text{def}}{=} \left\{ x \in X \middle| \begin{array}{l} \text{there exists some } W \in \mathcal{U} \\ \text{such that we have } x \in W \end{array} \right\}$$

$$\cup \left\{ x \in X \middle| \begin{array}{l} \text{there exists some } W \in \mathcal{V} \\ \text{such that we have } x \in W \end{array} \right\}$$

$$\stackrel{\text{def}}{=} \left(\bigcup_{W \in \mathcal{U}} W \right) \cup \left(\bigcup_{W \in \mathcal{V}} W \right)$$

$$= \left(\bigcup_{U \in \mathcal{U}} U \right) \cup \left(\bigcup_{V \in \mathcal{V}} V \right).$$

This finishes the proof.

Item 6: Interaction With Unions II

Assume ${\mathcal V}$ is nonempty. We have

$$U \cup \bigcup_{V \in \mathcal{V}} V \stackrel{\text{def}}{=} \left\{ x \in X \middle| x \in U \text{ or } x \in \bigcup_{V \in \mathcal{V}} V \right\}$$

$$= \left\{ x \in X \middle| x \in U \text{ or there exists some} \right.$$

$$= \left\{ x \in X \middle| \text{there exists some} V \in \mathcal{V} \right.$$

$$= \left\{ x \in X \middle| \text{there exists some} V \in \mathcal{V} \right.$$

$$= \left\{ x \in X \middle| \text{there exists some} V \in \mathcal{V} \right.$$

$$= \left\{ x \in X \middle| \text{there exists some} V \in \mathcal{V} \right.$$

$$= \left. \bigcup_{V \in \mathcal{V}} U \cup V \right.$$

This concludes the proof of the first statement. For the second statement, use Item 4 of Proposition 4.3.8.1.2 to rewrite

$$\left(\bigcup_{U\in\mathcal{U}}U\right)\cup V=V\cup\left(\bigcup_{U\in\mathcal{U}}U\right),$$

$$\bigcup_{U\in\mathcal{U}}(U\cup V)=\bigcup_{U\in\mathcal{U}}(V\cup U).$$

But these two sets are equal by the first statement.

Item 7: Interaction With Intersections I

We have

$$\bigcup_{W \in \mathcal{U} \cap \mathcal{V}} W \stackrel{\text{def}}{=} \left\{ x \in X \middle| \begin{array}{l} \text{there exists some } W \in \mathcal{U} \cap \mathcal{V} \\ \text{such that we have } x \in W \end{array} \right\}$$

$$\subset \left\{ x \in X \middle| \begin{array}{l} \text{there exists some } U \in \mathcal{U} \text{ and some } V \in \mathcal{V} \\ \text{such that we have } x \in U \text{ and } x \in V \end{array} \right\}$$

$$= \left\{ x \in X \middle| \begin{array}{l} \text{there exists some } U \in \mathcal{U} \\ \text{such that we have } x \in U \end{array} \right\}$$

$$\bigcup \left\{ x \in X \middle| \text{ there exists some } V \in \mathcal{V} \right\} \\
\text{such that we have } x \in V \right\} \\
\stackrel{\text{def}}{=} \left(\bigcup_{U \in \mathcal{U}} U \right) \cap \left(\bigcup_{V \in \mathcal{V}} V \right).$$

This finishes the proof.

Item 8: Interaction With Intersections II

We have

$$U \cap \bigcup_{V \in \mathcal{V}} V \stackrel{\text{def}}{=} \left\{ x \in X \mid x \in U \text{ and } x \in \bigcup_{V \in \mathcal{V}} V \right\}$$

$$= \left\{ x \in X \mid x \in U \text{ and there exists some} \right\}$$

$$= \left\{ x \in X \mid \text{there exists some } V \in \mathcal{V} \right\}$$

$$= \left\{ x \in X \mid \text{there exists some } V \in \mathcal{V} \right\}$$

$$= \left\{ x \in X \mid \text{there exists some } V \in \mathcal{V} \right\}$$

$$= \left\{ x \in X \mid \text{there exists some } V \in \mathcal{V} \right\}$$

$$\stackrel{\text{def}}{=} \bigcup_{V \in \mathcal{V}} U \cap V.$$

This concludes the proof of the first statement. For the second statement, use Item 5 of Proposition 4.3.9.1.2 to rewrite

$$\left(\bigcup_{U\in\mathcal{U}}U\right)\cap V=V\cap\left(\bigcup_{U\in\mathcal{U}}U\right),$$

$$\bigcup_{U\in\mathcal{U}}(U\cap V)=\bigcup_{U\in\mathcal{U}}(V\cap U).$$

But these two sets are equal by the first statement.

Item 9: Interaction With Differences

Let $X = \{0, 1\}$, let $\mathcal{U} = \{\{0, 1\}\}$, and let $\mathcal{V} = \{\{0\}\}$. We have

$$\bigcup_{W \in \mathcal{U} \setminus \mathcal{V}} U = \bigcup_{W \in \{\{0,1\}\}} W$$
$$= \{0, 1\},$$

whereas

$$\left(\bigcup_{U \in \mathcal{U}} U\right) \setminus \left(\bigcup_{V \in \mathcal{V}} V\right) = \{0, 1\} \setminus \{0\}$$
$$= \{1\}.$$

Thus we have

$$\bigcup_{W\in\mathcal{U}\backslash\mathcal{V}}W=\left\{0,1\right\}\neq\left\{1\right\}=\left(\bigcup_{U\in\mathcal{U}}U\right)\backslash\left(\bigcup_{V\in\mathcal{V}}V\right).$$

This finishes the proof.

Item 10: Interaction With Complements I

Let $X = \{0, 1\}$ and let $\mathcal{U} = \{0\}$. We have

$$\bigcup_{U \in \mathcal{U}^{\mathsf{c}}} U = \bigcup_{U \in \{\emptyset, \{1\}, \{0,1\}\}} U$$
$$= \{0, 1\},$$

whereas

$$\bigcup_{U \in \mathcal{U}} U^{c} = \{0\}^{c}$$
$$= \{1\}.$$

Thus we have

$$\bigcup_{U \in \mathcal{U}^{\mathsf{c}}} U = \{0, 1\} \neq \{1\} = \bigcup_{U \in \mathcal{U}} U^{\mathsf{c}}.$$

This finishes the proof.

Item 11: Interaction With Complements II

We have

$$\left(\bigcup_{U \in \mathcal{U}} U\right)^{\mathsf{c}} \stackrel{\text{def}}{=} \left\{ x \in X \middle| \begin{array}{l} \text{there exists no } U \in \mathcal{U} \\ \text{such that we have } x \in U \end{array} \right\}$$

$$= \left\{ x \in X \middle| \begin{array}{l} \text{for all } U \in \mathcal{U} \\ \text{we have } x \notin U \end{array} \right\}$$

$$\stackrel{\text{def}}{=} \left\{ x \in X \middle| \begin{array}{l} \text{for all } U \in \mathcal{U} \\ \text{we have } x \in U^{\mathsf{c}} \end{array} \right\}$$

$$\stackrel{\text{def}}{=} \bigcap_{U \in \mathcal{U}} U^{\mathsf{c}}.$$

Item 12: Interaction With Complements III

By Item 11 Item 3 of Proposition 4.3.11.1.2, we have

$$\left(\bigcap_{U \in \mathcal{U}} U\right)^{c} = \left(\bigcap_{U \in \mathcal{U}} (U^{c})^{c}\right)^{c}$$
$$= \left(\left(\bigcup_{U \in \mathcal{U}} U^{c}\right)^{c}\right)^{c}$$
$$= \bigcup_{U \in \mathcal{U}} U^{c}.$$

Item 13: Interaction With Symmetric Differences

Let $X = \{0, 1\}$, let $\mathcal{U} = \{\{0, 1\}\}$, and let $\mathcal{V} = \{\{0\}, \{0, 1\}\}$. We have

$$\bigcup_{W \in \mathcal{U} \triangle \mathcal{V}} W = \bigcup_{W \in \{\{0\}\}} W$$
$$= \{0\},$$

whereas

$$\left(\bigcup_{U\in\mathcal{U}}U\right)\triangle\left(\bigcup_{V\in\mathcal{V}}V\right)=\left\{0,1\right\}\triangle\left\{0,1\right\}$$
$$=\emptyset.$$

Thus we have

$$\bigcup_{W\in\mathcal{U}\triangle\mathcal{V}}W=\left\{0\right\}\neq\emptyset=\left(\bigcup_{U\in\mathcal{U}}U\right)\triangle\left(\bigcup_{V\in\mathcal{V}}V\right).$$

This finishes the proof.

Item 14: Interaction With Internal Homs I

This is a repetition of Item 7 of Proposition 4.4.7.1.4 and is proved there.

Item 15: Interaction With Internal Homs II

This is a repetition of Item 8 of Proposition 4.4.7.1.4 and is proved there.

Item 16: Interaction With Internal Homs III

This is a repetition of Item 9 of Proposition 4.4.7.1.4 and is proved there.

Item 17: Interaction With Direct Images

This is a repetition of Item 3 of Proposition 4.6.1.1.5 and is proved there.

Item 18: Interaction With Inverse Images

This is a repetition of Item 3 of Proposition 4.6.2.1.3 and is proved there.

Item 19: Interaction With Codirect Images

This is a repetition of Item 3 of Proposition 4.6.3.1.7 and is proved there.

Item 20: Interaction With Intersections of Families I

We have

$$\bigcup_{U \in \bigcup_{A \in \mathcal{A}} A} U \stackrel{\text{def}}{=} \left\{ x \in X \middle| \begin{array}{c} \text{for each } U \in \bigcup_{A \in \mathcal{A}} A, \\ \text{we have } x \in U \end{array} \right\}$$

$$= \left\{ x \in X \middle| \begin{array}{l} \text{for each } A \in \mathcal{A} \text{ and each} \\ U \in A, \text{ we have } x \in U \end{array} \right\}$$

$$\stackrel{\text{def}}{=} \bigcap_{A \in A} \left(\bigcap_{U \in A} U \right).$$

This finishes the proof.

Item 21: Interaction With Intersections of Families II

Omitted.

003V 4.3.7 Intersections of Families of Subsets

Let X be a set and let $\mathcal{U} \in \mathcal{P}(\mathcal{P}(X))$.

003W DEFINITION 4.3.7.1.1 ► INTERSECTIONS OF FAMILIES OF SUBSETS

The **intersection of** \mathcal{U} is the set $\bigcap_{U \in \mathcal{U}} U$ defined by

$$\bigcap_{U \in \mathcal{U}} U \stackrel{\text{def}}{=} \bigg\{ x \in X \, \middle| \, \begin{array}{l} \text{for each } U \in \mathcal{U}, \\ \text{we have } x \in U \end{array} \bigg\}.$$

PROPOSITION 4.3.7.1.2 ➤ PROPERTIES OF INTERSECTIONS OF FAMILIES OF SUBSETS

Let X be a set.

01GB

1. Functoriality. The assignment $\mathcal{U} \mapsto \bigcap_{U \in \mathcal{U}} U$ defines a functor

$$\bigcap \colon (\mathcal{P}(\mathcal{P}(X)), \supset) \to (\mathcal{P}(X), \subset).$$

In particular, for each $\mathcal{U}, \mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$, the following condition is satisfied:

$$(\star) \ \ \mathrm{If} \ \mathcal{U} \subset \mathcal{V}, \mathrm{then} \bigcap_{V \in \mathcal{V}} V \subset \bigcap_{U \in \mathcal{U}} U.$$

01GC

2. Oplax Associativity. We have a natural transformation

$$\begin{array}{c|c}
\mathcal{P}(\mathcal{P}(\mathcal{P}(X))) & \xrightarrow{\mathrm{id}_{\mathcal{P}(X)} \star \cap} \mathcal{P}(\mathcal{P}(X)) \\
\cap \star \mathrm{id}_{\mathcal{P}(X)} & & & & & & & \\
\mathcal{P}(\mathcal{P}(X)) & & & & & & & \\
\end{array}$$

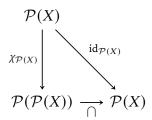

with components

$$\bigcap_{A \in \mathcal{A}} \left(\bigcap_{U \in A} U \right) \subset \bigcap_{U \in \bigcap_{A \in \mathcal{A}} A} U$$

for each $A \in \mathcal{P}(\mathcal{P}(\mathcal{P}(X)))$.

01GD

3. Left Unitality. The diagram

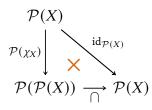

commutes, i.e. we have

$$\bigcap_{V \in \{U\}} V = U.$$

for each $U \in \mathcal{P}(X)$.

01GE

4. Oplax Right Unitality. The diagram

01GF

01GG

does not commute in general, i.e. we may have

$$\bigcap_{\{x\}\in\chi_X(U)}\{x\}\neq U$$

in general, where $U \in \mathcal{P}(X)$. However, when U is nonempty, we have

$$\bigcap_{\{x\}\in\chi_X(U)}\{x\}\subset U.$$

5. Interaction With Unions I. The diagram

commutes, i.e. we have

$$\bigcap_{W \in \mathcal{U} \cup \mathcal{V}} W = \left(\bigcap_{U \in \mathcal{U}} U\right) \cap \left(\bigcap_{V \in \mathcal{V}} V\right)$$

for each $\mathcal{U}, \mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$.

6. Interaction With Unions II. The diagram

commute, i.e. we have

$$U \cup \left(\bigcap_{V \in \mathcal{V}} V\right) = \bigcap_{V \in \mathcal{V}} (U \cup V),$$
$$\left(\bigcap_{U \in \mathcal{U}} U\right) \cup V = \bigcap_{U \in \mathcal{U}} (U \cup V)$$

for each $\mathcal{U}, \mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$ and each $\mathcal{U}, \mathcal{V} \in \mathcal{P}(X)$.

01GH

7. *Interaction With Intersections I.* We have a natural transformation

with components

$$\left(\bigcap_{U\in\mathcal{U}}U\right)\cap\left(\bigcap_{V\in\mathcal{V}}V\right)\subset\bigcap_{W\in\mathcal{U}\cap\mathcal{V}}W$$

for each $\mathcal{U}, \mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$.

01GJ

8. Interaction With Intersections II. The diagrams

commute, i.e. we have

$$U \cup \left(\bigcap_{V \in \mathcal{V}} V\right) = \bigcap_{V \in \mathcal{V}} (U \cup V),$$
$$\left(\bigcap_{U \in \mathcal{U}} U\right) \cup V = \bigcap_{U \in \mathcal{U}} (U \cup V)$$

for each $\mathcal{U}, \mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$ and each $U, V \in \mathcal{P}(X)$.

01GK

9. Interaction With Differences. The diagram

$$\mathcal{P}(\mathcal{P}(X)) \times \mathcal{P}(\mathcal{P}(X)) \xrightarrow{\setminus} \mathcal{P}(\mathcal{P}(X))$$

$$\cap \times \cap \downarrow \qquad \qquad \downarrow \cap$$

$$\mathcal{P}(X) \times \mathcal{P}(X) \xrightarrow{\setminus} \mathcal{P}(X),$$

01GL

01GM

does not commute in general, i.e. we may have

$$\bigcap_{W\in\mathcal{U}\backslash\mathcal{V}}W\neq\left(\bigcap_{U\in\mathcal{U}}U\right)\backslash\left(\bigcap_{V\in\mathcal{V}}V\right)$$

in general, where $\mathcal{U}, \mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$.

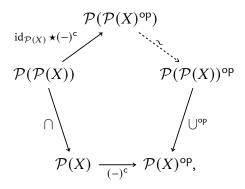

10. Interaction With Complements I. The diagram

does not commute in general, i.e. we may have

$$\bigcap_{W\in\mathcal{U}^\mathsf{c}}W\neq\bigcap_{U\in\mathcal{U}}U^\mathsf{c}$$

in general, where $\mathcal{U} \in \mathcal{P}(\mathcal{P}(X))$.

11. Interaction With Complements II. The diagram

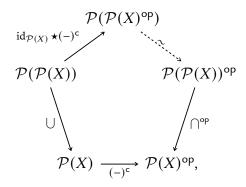

commutes, i.e. we have

$$\left(\bigcap_{U\in\mathcal{U}}U\right)^{\mathsf{c}}=\bigcup_{U\in\mathcal{U}}U^{\mathsf{c}}$$

for each $U \in \mathcal{P}(\mathcal{P}(X))$.

01GN

12. Interaction With Complements III. The diagram

commutes, i.e. we have

$$\left(\bigcup_{U\in\mathcal{U}}U\right)^{\mathsf{c}}=\bigcap_{U\in\mathcal{U}}U^{\mathsf{c}}$$

for each $\mathcal{U} \in \mathcal{P}(\mathcal{P}(X))$.

01GP

13. Interaction With Symmetric Differences. The diagram

$$\mathcal{P}(\mathcal{P}(X)) \times \mathcal{P}(\mathcal{P}(X)) \xrightarrow{\Delta} \mathcal{P}(\mathcal{P}(X))$$

$$\cap \times \cap \downarrow \qquad \qquad \downarrow \cap$$

$$\mathcal{P}(X) \times \mathcal{P}(X) \xrightarrow{\Delta} \mathcal{P}(X),$$

does not commute in general, i.e. we may have

$$\bigcap_{W \in \mathcal{U} \triangle \mathcal{V}} W \neq \left(\bigcap_{U \in \mathcal{U}} U\right) \triangle \left(\bigcap_{V \in \mathcal{V}} V\right)$$

in general, where $\mathcal{U}, \mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$.

01GQ

14. Interaction With Internal Homs I. The diagram

$$\mathcal{P}(\mathcal{P}(X))^{\mathrm{op}} \times \mathcal{P}(\mathcal{P}(X)) \xrightarrow{[-1,-2]_{\mathcal{P}(X)}} \mathcal{P}(\mathcal{P}(X))$$

$$\cap^{\mathrm{op}} \times \cap^{\mathrm{op}} \downarrow \qquad \qquad \downarrow \cap$$

$$\mathcal{P}(X)^{\mathrm{op}} \times \mathcal{P}(X) \xrightarrow{[-1,-2]_X} \mathcal{P}(X),$$

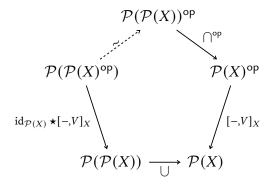

does not commute in general, i.e. we may have

$$\bigcap_{W \in [\mathcal{U}, \mathcal{V}]_{\mathcal{P}(X)}} W \neq \left[\bigcap_{U \in \mathcal{U}} U, \bigcap_{V \in \mathcal{V}} V\right]_X$$

in general, where $\mathcal{U} \in \mathcal{P}(\mathcal{P}(X))$.

01GR

15. Interaction With Internal Homs II. The diagram

commutes, i.e. we have

$$\left[\bigcap_{U\in\mathcal{U}}U,V\right]_X=\bigcup_{U\in\mathcal{U}}[U,V]_X$$

for each $U \in \mathcal{P}(\mathcal{P}(X))$ and each $V \in \mathcal{P}(X)$.

01GS

16. Interaction With Internal Homs III. The diagram

$$\begin{array}{ccc}
\mathcal{P}(\mathcal{P}(X)) & \xrightarrow{\bigcap} \mathcal{P}(X) \\
\downarrow^{\mathrm{id}_{\mathcal{P}(X)} \star [U,-]_X} & & \downarrow^{[U,-]_X} \\
\mathcal{P}(\mathcal{P}(X)) & \xrightarrow{\bigcap} \mathcal{P}(X)
\end{array}$$

commutes, i.e. we have

$$\left[U, \bigcap_{V \in \mathcal{V}} V\right]_X = \bigcap_{V \in \mathcal{V}} [U, V]_X$$

for each $U \in \mathcal{P}(X)$ and each $\mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$.

01GT

17. Interaction With Direct Images. Let $f: X \to Y$ be a map of sets. The diagram

commutes, i.e. we have

$$\bigcap_{U \in \mathcal{U}} f_!(U) = \bigcap_{V \in f_!(\mathcal{U})} V$$

for each $\mathcal{U} \in \mathcal{P}(X)$, where $f_!(\mathcal{U}) \stackrel{\text{def}}{=} (f_!)_!(\mathcal{U})$.

01GU

18. *Interaction With Inverse Images*. Let $f: X \to Y$ be a map of sets. The diagram

$$\mathcal{P}(\mathcal{P}(Y)) \xrightarrow{(f^{-1})^{-1}} \mathcal{P}(\mathcal{P}(X))$$

$$\uparrow \qquad \qquad \downarrow \cap$$

$$\mathcal{P}(Y) \xrightarrow{f^{-1}} \mathcal{P}(X)$$

01GV

01GW

commutes, i.e. we have

$$\bigcap_{V\in\mathcal{V}}f^{-1}(V)=\bigcap_{U\in f^{-1}(\mathcal{U})}U$$

for each $V \in \mathcal{P}(Y)$, where $f^{-1}(V) \stackrel{\text{def}}{=} (f^{-1})^{-1}(V)$.

19. Interaction With Codirect Images. Let $f: X \to Y$ be a map of sets. The diagram

commutes, i.e. we have

$$\bigcap_{U \in \mathcal{U}} f_*(U) = \bigcap_{V \in f_*(\mathcal{U})} V$$

for each $\mathcal{U} \in \mathcal{P}(X)$, where $f_*(\mathcal{U}) \stackrel{\text{def}}{=} (f_*)_*(\mathcal{U})$.

20. Interaction With Unions of Families I. The diagram

$$\begin{array}{ccc}
\mathcal{P}(\mathcal{P}(X)) & \xrightarrow{\mathrm{id}_{\mathcal{P}(X)} \star \cap} & \mathcal{P}(\mathcal{P}(x)) \\
\downarrow \star \mathrm{id}_{\mathcal{P}(X)} & & & \downarrow \cap \\
\mathcal{P}(X) & \xrightarrow{\bigcap} & X
\end{array}$$

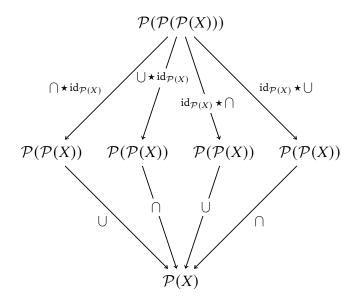

commutes, i.e. we have

$$\bigcap_{U \in \bigcup_{A \in \mathcal{A}} A} U = \bigcap_{A \in \mathcal{A}} \left(\bigcap_{U \in A} U\right)$$

for each $A \in \mathcal{P}(\mathcal{P}(X))$.

01GX

21. Interaction With Unions of Families II. Let X be a set and consider the compositions

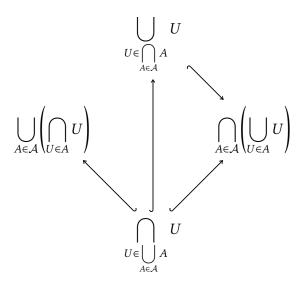

given by

$$A \mapsto \bigcup_{U \in \bigcap_{A \in \mathcal{A}} A} U, \quad A \mapsto \bigcap_{U \in \bigcup_{A \in \mathcal{A}} A} U,$$

$$A \mapsto \bigcup_{A \in \mathcal{A}} \left(\bigcap_{U \in A} U\right), \quad A \mapsto \bigcap_{A \in \mathcal{A}} \left(\bigcup_{U \in A} U\right)$$

for each $\mathcal{A} \in \mathcal{P}(\mathcal{P}(\mathcal{P}(X)))$. We have the following inclusions:

All other possible inclusions fail to hold in general.

PROOF 4.3.7.1.3 ► PROOF OF PROPOSITION 4.3.6.1.2

Item 1: Functoriality

Since $\mathcal{P}(X)$ is posetal, it suffices to prove the condition (\star) . So let $\mathcal{U}, \mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$ with $\mathcal{U} \subset \mathcal{V}$. We claim that

$$\bigcap_{V\in\mathcal{V}}V\subset\bigcap_{U\in\mathcal{U}}U.$$

Indeed, if $x \in \bigcap_{V \in \mathcal{V}} V$, then $x \in V$ for all $V \in \mathcal{V}$. But since $\mathcal{U} \subset \mathcal{V}$, it follows that $x \in U$ for all $U \in \mathcal{U}$ as well. Thus $x \in \bigcap_{U \in \mathcal{U}} U$, which gives our desired inclusion.

Item 2: Oplax Associativity

We have

$$\bigcap_{A \in \mathcal{A}} \left(\bigcap_{U \in A} U \right) \stackrel{\text{def}}{=} \left\{ x \in X \middle| \begin{array}{c} \text{for each } A \in \mathcal{A}, \\ \text{we have } x \in \bigcap_{U \in A} U \end{array} \right\}$$

$$\stackrel{\text{def}}{=} \left\{ x \in X \middle| \begin{array}{c} \text{for each } A \in \mathcal{A} \text{ and each } \\ U \in A, \text{ we have } x \in U \end{array} \right\}$$

$$= \left\{ x \in X \middle| \begin{array}{c} \text{for each } U \in \bigcup_{A \in \mathcal{A}} A, \\ \text{we have } x \in U \end{array} \right\}$$

$$\subset \left\{ x \in X \middle| \begin{array}{c} \text{for each } U \in \bigcap_{A \in \mathcal{A}} A, \\ \text{we have } x \in U \end{array} \right\}$$

$$\stackrel{\text{def}}{=} \bigcap_{A \in \mathcal{A}} U.$$

$$U \in \bigcap_{A \in \mathcal{A}} A$$

Since $\mathcal{P}(X)$ is posetal, naturality is automatic (Categories, Item 4 of Proposition 11.2.7.1.2). This finishes the proof.

Item 3: Left Unitality

We have

$$\bigcap_{V \in \{U\}} V \stackrel{\text{def}}{=} \left\{ x \in X \middle| \begin{array}{l} \text{for each } V \in \{U\}, \\ \text{we have } x \in U \end{array} \right\}$$
$$= \left\{ x \in X \middle| x \in U \right\}$$
$$= U.$$

This finishes the proof.

Item 4: Oplax Right Unitality

If $U = \emptyset$, then we have

$$\bigcap_{\{u\}\in\chi_X(U)}\{u\}=\bigcap_{\{u\}\in\emptyset}\{u\}$$

$$=X$$
,

so $\bigcap_{\{u\}\in\chi_X(U)}\{u\}=X\neq\emptyset=U.$ When U is nonempty, we have two cases:

1. If U is a singleton, say $U = \{u\}$, we have

$$\bigcap_{\{u\}\in\chi_X(U)}\{u\}=\{u\}$$

$$\stackrel{\text{def}}{=}U.$$

2. If U contains at least two elements, we have

$$\bigcap_{\{u\}\in\chi_X(U)}\{u\}=\emptyset$$

$$\subset U.$$

This finishes the proof.

Item 5: Interaction With Unions I

We have

$$\bigcap_{W \in \mathcal{U} \cup \mathcal{V}} W \stackrel{\text{def}}{=} \left\{ x \in X \middle| \begin{array}{l} \text{for each } W \in \mathcal{U} \cup \mathcal{V}, \\ \text{we have } x \in W \end{array} \right\}$$

$$= \left\{ x \in X \middle| \begin{array}{l} \text{for each } W \in \mathcal{U} \text{ and each } \\ W \in \mathcal{V}, \text{ we have } x \in W \end{array} \right\}$$

$$\stackrel{\text{def}}{=} \left\{ x \in X \middle| \begin{array}{l} \text{for each } W \in \mathcal{U}, \\ \text{we have } x \in W \end{array} \right\}$$

$$\cap \left\{ x \in X \middle| \begin{array}{l} \text{for each } W \in \mathcal{V}, \\ \text{we have } x \in W \end{array} \right\}$$

$$\stackrel{\text{def}}{=} \left(\bigcap_{W \in \mathcal{U}} W \right) \cap \left(\bigcap_{W \in \mathcal{V}} W \right)$$

020B

020C

$$= \left(\bigcap_{U \in \mathcal{U}} U\right) \cap \left(\bigcap_{V \in \mathcal{V}} V\right).$$

This finishes the proof.

Item 6: Interaction With Unions II

Omitted.

Item 7: Interaction With Intersections I

We have

$$\left(\bigcap_{U \in \mathcal{U}} U\right) \cap \left(\bigcap_{V \in \mathcal{V}} V\right) \stackrel{\text{def}}{=} \left\{ x \in X \middle| \begin{array}{l} \text{for each } U \in \mathcal{U}, \\ \text{we have } x \in U \end{array} \right\}$$

$$\cup \left\{ x \in X \middle| \begin{array}{l} \text{for each } V \in \mathcal{V}, \\ \text{we have } x \in V \end{array} \right\}$$

$$= \left\{ x \in X \middle| \begin{array}{l} \text{for each } W \in \mathcal{U} \cap \mathcal{V}, \\ \text{we have } x \in W \end{array} \right\}$$

$$\subset \left\{ x \in X \middle| \begin{array}{l} \text{for each } W \in \mathcal{U} \cap \mathcal{V}, \\ \text{we have } x \in W \end{array} \right\}$$

$$\stackrel{\text{def}}{=} \bigcap_{W \in \mathcal{U} \cap \mathcal{V}} W.$$

Since $\mathcal{P}(X)$ is posetal, naturality is automatic (Categories, Item 4 of Proposition 11.2.7.1.2). This finishes the proof.

Item 8: Interaction With Intersections II

Omitted.

Item 9: Interaction With Differences

Let
$$X = \{0, 1\}$$
, let $\mathcal{U} = \{\{0\}, \{0, 1\}\}$, and let $\mathcal{V} = \{\{0\}\}$. We have

$$\bigcap_{W \in \mathcal{U} \setminus \mathcal{V}} U = \bigcap_{W \in \{\{0,1\}\}} W$$

$$= \{0, 1\},\$$

whereas

$$\left(\bigcap_{U\in\mathcal{U}}U\right)\setminus\left(\bigcap_{V\in\mathcal{V}}V\right)=\{0\}\setminus\{0\}$$
$$=\emptyset.$$

Thus we have

$$\bigcap_{W\in\mathcal{U}\backslash\mathcal{V}}W=\left\{0,1\right\}\neq\emptyset=\left(\bigcap_{U\in\mathcal{U}}U\right)\backslash\left(\bigcap_{V\in\mathcal{V}}V\right).$$

This finishes the proof.

Item 10: Interaction With Complements I

Let $X = \{0, 1\}$ and let $\mathcal{U} = \{\{0\}\}$. We have

$$\bigcap_{W \in \mathcal{U}^{c}} U = \bigcap_{W \in \{\emptyset, \{1\}, \{0,1\}\}} W$$

$$= \emptyset.$$

whereas

$$\bigcap_{U \in \mathcal{U}} U^{c} = \{0\}^{c}$$
$$= \{1\}.$$

Thus we have

$$\bigcap_{W\in\mathcal{U}^\mathsf{c}}U=\emptyset\neq\{1\}=\bigcap_{U\in\mathcal{U}}U^\mathsf{c}.$$

This finishes the proof.

Item 11: Interaction With Complements II

This is a repetition of Item 12 of Proposition 4.3.6.1.2 and is proved there.

Item 12: Interaction With Complements III

This is a repetition of Item 11 of Proposition 4.3.6.1.2 and is proved there.

Item 13: Interaction With Symmetric Differences

Let $X = \{0, 1\}$, let $\mathcal{U} = \{\{0, 1\}\}$, and let $\mathcal{V} = \{\{0\}, \{0, 1\}\}$. We have

$$\bigcap_{W \in \mathcal{U} \triangle \mathcal{V}} W = \bigcap_{W \in \{\{0\}\}} W$$
$$= \{0\},$$

whereas

$$\left(\bigcap_{U\in\mathcal{U}}U\right)\triangle\left(\bigcap_{V\in\mathcal{V}}V\right)=\{0,1\}\triangle\{0\}$$
$$=\emptyset.$$

Thus we have

$$\bigcap_{W\in\mathcal{U}\triangle\mathcal{V}}W=\left\{0\right\}\neq\emptyset=\left(\bigcap_{U\in\mathcal{U}}U\right)\triangle\left(\bigcap_{V\in\mathcal{V}}V\right).$$

This finishes the proof.

Item 14: Interaction With Internal Homs I

This is a repetition of Item 10 of Proposition 4.4.7.1.4 and is proved there.

Item 15: Interaction With Internal Homs II

This is a repetition of Item 11 of Proposition 4.4.7.1.4 and is proved there.

Item 16: Interaction With Internal Homs III

This is a repetition of Item 12 of Proposition 4.4.7.1.4 and is proved there.

Item 17: Interaction With Direct Images

This is a repetition of Item 4 of Proposition 4.6.1.1.5 and is proved there.

Item 18: Interaction With Inverse Images

This is a repetition of Item 4 of Proposition 4.6.2.1.3 and is proved there.

Item 19: Interaction With Codirect Images

This is a repetition of Item 4 of Proposition 4.6.3.1.7 and is proved there.

Item 20: Interaction With Unions of Families I

This is a repetition of Item 20 of Proposition 4.3.6.1.2 and is proved there.

Item 21: Interaction With Unions of Families II

This is a repetition of Item 21 of Proposition 4.3.6.1.2 and is proved there.

003G 4.3.8 Binary Unions

Let X be a set and let $U, V \in \mathcal{P}(X)$.

003H DEFINITION 4.3.8.1.1 ► BINARY UNIONS

The **union of** U **and** V is the set $U \cup V$ defined by

$$U \cup V \stackrel{\text{def}}{=} \bigcup_{z \in \{U, V\}} z$$

$$\stackrel{\text{def}}{=} \{x \in X \mid x \in U \text{ or } x \in V\}.$$

003J PROPOSITION 4.3.8.1.2 ▶ PROPERTIES OF BINARY UNIONS

Let *X* be a set.

003K

01GY

1. Functoriality. The assignments $U, V, (U, V) \mapsto U \cup V$ define functors

$$\begin{array}{ll} U \cup -\colon & (\mathcal{P}(X), \subset) & \to (\mathcal{P}(X), \subset), \\ - \cup V \colon & (\mathcal{P}(X), \subset) & \to (\mathcal{P}(X), \subset), \\ -_1 \cup -_2 \colon (\mathcal{P}(X) \times \mathcal{P}(X), \subset \times \subset) \to (\mathcal{P}(X), \subset). \end{array}$$

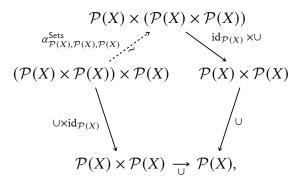

In particular, the following statements hold for each $U, V, A, B \in \mathcal{P}(X)$:

- (a) If $U \subset A$, then $U \cup V \subset A \cup V$.
- 01GZ (b) If $V \subset B$, then $U \cup V \subset U \cup B$.

(c) If $U \subset A$ and $V \subset B$, then $U \cup V \subset A \cup B$.

003M

2. Associativity. The diagram

commutes, i.e. we have an equality of sets

$$(U \cup V) \cup W = U \cup (V \cup W)$$

for each $U, V, W \in \mathcal{P}(X)$.

003N

3. Unitality. The diagrams

$$\operatorname{pt} \times \mathcal{P}(X) \xrightarrow{[\varnothing] \times \operatorname{id}_{\mathcal{P}(X)}} \mathcal{P}(X) \times \mathcal{P}(X) \qquad \mathcal{P}(X) \times \operatorname{pt} \xrightarrow{\operatorname{id}_{\mathcal{P}(X)} \times [\varnothing]} \mathcal{P}(X) \times \mathcal{P}(X)$$

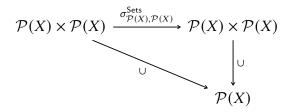

commute, i.e. we have equalities of sets

$$\emptyset \cup U = U$$
, $U \cup \emptyset = U$

for each $U \in \mathcal{P}(X)$.

003P

4. Commutativity. The diagram

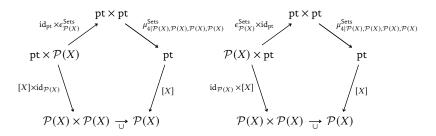

003R

commutes, i.e. we have an equality of sets

$$U \cup V = V \cup U$$

for each $U, V \in \mathcal{P}(X)$.

5. Annihilation With X. The diagrams

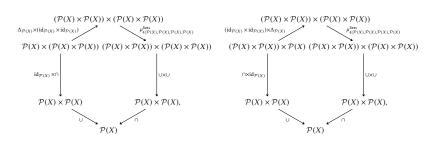

commute, i.e. we have equalities of sets

$$U \cup X = X,$$
$$X \cup V = X$$

for each $U, V \in \mathcal{P}(X)$.

6. Distributivity of Unions Over Intersections. The diagrams

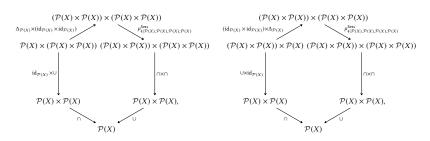

commute, i.e. we have equalities of sets

$$U \cup (V \cap W) = (U \cup V) \cap (U \cup W),$$

$$(U \cap V) \cup W = (U \cup W) \cap (V \cup W)$$

for each $U, V, W \in \mathcal{P}(X)$.

7. Distributivity of Intersections Over Unions. The diagrams

commute, i.e. we have equalities of sets

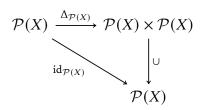

$$U \cap (V \cup W) = (U \cap V) \cup (U \cap W),$$

$$(U \cup V) \cap W = (U \cap W) \cup (V \cap W)$$

for each $U, V, W \in \mathcal{P}(X)$.

003Q

8. Idempotency. The diagram

commutes, i.e. we have an equality of sets

$$U \cup U = U$$

for each $U \in \mathcal{P}(X)$.

003L

9. Via Intersections and Symmetric Differences. The diagram

$$(\mathcal{P}(X) \times \mathcal{P}(X)) \times (\mathcal{P}(X) \times \mathcal{P}(X)) \xrightarrow{\triangle \times \cap} \mathcal{P}(X) \times \mathcal{P}(X)$$

$$\stackrel{\Delta_{\mathcal{P}(X) \times \mathcal{P}(X)}}{\longrightarrow} \mathcal{P}(X) \times \mathcal{P}(X) \xrightarrow{\Delta} \mathcal{P}(X)$$

commutes, i.e. we have an equality of sets

$$U \cup V = (U \triangle V) \triangle (U \cap V)$$

for each $U, V \in \mathcal{P}(X)$.

10. Interaction With Characteristic Functions I. We have

$$\chi_{U \cup V} = \max(\chi_U, \chi_V)$$

for each $U, V \in \mathcal{P}(X)$.

11. Interaction With Characteristic Functions II. We have

$$\chi_{U \cup V} = \chi_U + \chi_V - \chi_{U \cap V}$$

for each $U, V \in \mathcal{P}(X)$.

12. Interaction With Direct Images. Let $f:X\to Y$ be a function. The diagram

$$\mathcal{P}(X) \times \mathcal{P}(X) \xrightarrow{f_{1} \times f_{1}} \mathcal{P}(Y) \times \mathcal{P}(Y)$$

$$\downarrow \bigcup_{\mathcal{P}(X) \xrightarrow{f_{1}}} \mathcal{P}(Y)$$

commutes, i.e. we have

$$f_!(U \cup V) = f_!(U) \cup f_!(V)$$

for each $U, V \in \mathcal{P}(X)$.

13. *Interaction With Inverse Images*. Let $f: X \to Y$ be a function. The diagram

$$\mathcal{P}(Y) \times \mathcal{P}(Y) \xrightarrow{f^{-1} \times f^{-1}} \mathcal{P}(X) \times \mathcal{P}(X)$$

$$\downarrow \qquad \qquad \qquad \downarrow \cup$$

$$\mathcal{P}(Y) \xrightarrow{f^{-1}} \mathcal{P}(X)$$

003T

003S

01H3

01H4

commutes, i.e. we have

$$f^{-1}(U \cup V) = f^{-1}(U) \cup f^{-1}(V)$$

for each $U, V \in \mathcal{P}(Y)$.

14. *Interaction With Codirect Images.* Let $f: X \to Y$ be a function. We have a natural transformation

$$\mathcal{P}(X) \times \mathcal{P}(X) \xrightarrow{f_* \times f_*} \mathcal{P}(Y) \times \mathcal{P}(Y)$$

$$\downarrow \qquad \qquad \qquad \downarrow \qquad \qquad \downarrow \cup$$

$$\mathcal{P}(X) \xrightarrow{f_*} \mathcal{P}(Y)$$

with components

$$f_*(U) \cup f_*(V) \subset f_*(U \cup V)$$

indexed by $U, V \in \mathcal{P}(X)$.

15. Interaction With Powersets and Semirings. The quintuple $(\mathcal{P}(X), \cup, \cap, \emptyset, X)$ is an idempotent commutative semiring.

003U

01H5

PROOF 4.3.8.1.3 ► PROOF OF PROPOSITION 4.3.8.1.2

Item 1: Functoriality

See [Pro25an].

Item 2: Associativity

See [Pro25ba].

Item 3: Unitality

This follows from [Pro25bd] and Item 4.

Item 4: Commutativity

See [Pro25bb].

Item 5: Annihilation With X

We have

$$U \cup X \stackrel{\text{def}}{=} \{x \in X \mid x \in U \text{ or } x \in X\}$$
$$= \{x \in X \mid x \in X\},$$
$$= X$$

and

$$X \cup V \stackrel{\text{def}}{=} \{x \in X \mid x \in X \text{ or } x \in V\}$$
$$= \{x \in X \mid x \in X\}$$
$$= X.$$

This finishes the proof.

Item 6: Distributivity of Unions Over Intersections

See [Pro25az].

Item 7: Distributivity of Intersections Over Unions

See [Pro25aj].

Item 8: Idempotency

See [Pro25am].

Item 9: Via Intersections and Symmetric Differences

See [Pro25ay].

Item 10: Interaction With Characteristic Functions I

See [Pro25h].

Item 11: Interaction With Characteristic Functions II

See [Pro25h].

Item 12: Interaction With Direct Images

See [Pro25p].

Item 13: Interaction With Inverse Images

See [Pro25y].

Item 14: Interaction With Codirect Images

This is a repetition of Item 5 of Proposition 4.6.3.1.7 and is proved there.

Item 15: Interaction With Powersets and Semirings

This follows from Items 2 to 4 and 8 of this proposition and Items 3 to 6 and 8 of Proposition 4.3.9.1.2.

003X 4.3.9 Binary Intersections

Let X be a set and let $U, V \in \mathcal{P}(X)$.

003Y DEFINITION 4.3.9.1.1 ► BINARY INTERSECTIONS

The **intersection of** U **and** V is the set $U \cap V$ defined by

$$U \cap V \stackrel{\text{def}}{=} \bigcap_{z \in \{U, V\}} z$$

$$\stackrel{\text{def}}{=} \{x \in X \mid x \in U \text{ or } x \in V\}.$$

003Z PROPOSITION 4.3.9.1.2 ► PROPERTIES OF BINARY INTERSECTIONS

Let X be a set.

0040

01H6

01H7

01H8

1. Functoriality. The assignments $U,V,(U,V)\mapsto U\cap V$ define functors

$$U \cap -: \qquad (\mathcal{P}(X), \subset) \qquad \to (\mathcal{P}(X), \subset),$$

$$- \cap V: \qquad (\mathcal{P}(X), \subset) \qquad \to (\mathcal{P}(X), \subset),$$

$$-_1 \cap -_2: (\mathcal{P}(X) \times \mathcal{P}(X), \subset \times \subset) \to (\mathcal{P}(X), \subset).$$

In particular, the following statements hold for each $U, V, A, B \in \mathcal{P}(X)$:

- (a) If $U \subset A$, then $U \cap V \subset A \cap V$.
- (b) If $V \subset B$, then $U \cap V \subset U \cap B$.
- (c) If $U \subset A$ and $V \subset B$, then $U \cap V \subset A \cap B$.

0041

2. Adjointness. We have adjunctions

$$(U \cap - \dashv [U, -]_X): \quad \mathcal{P}(X) \xrightarrow{\bot} \mathcal{P}(X),$$

$$(- \cap V \dashv [V, -]_X): \quad \mathcal{P}(X) \xrightarrow{\bot} \mathcal{P}(X),$$

$$(-\cap V \dashv [V,-]_X): \quad \mathcal{P}(X) \underbrace{\stackrel{-\cap V}{\underset{[V,-]_X}{\bot}}} \mathcal{P}(X),$$

witnessed by bijections

$$\operatorname{Hom}_{\mathcal{P}(X)}(U \cap V, W) \cong \operatorname{Hom}_{\mathcal{P}(X)}(U, [V, W]_X),$$

$$\operatorname{Hom}_{\mathcal{P}(X)}(U \cap V, W) \cong \operatorname{Hom}_{\mathcal{P}(X)}(V, [U, W]_X),$$

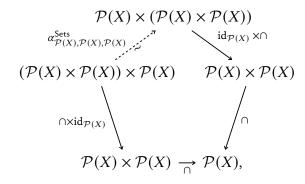

natural in $U, V, W \in \mathcal{P}(X)$, where

$$[-1,-2]_X \colon \mathcal{P}(X)^{\mathsf{op}} \times \mathcal{P}(X) \to \mathcal{P}(X)$$

is the bifunctor of Section 4.4.7. In particular, the following statements hold for each $U, V, W \in \mathcal{P}(X)$:

(a) The following conditions are equivalent:

- i. We have $U \cap V \subset W$.
- ii. We have $U \subset [V, W]_X$.
- (b) The following conditions are equivalent:
 - i. We have $U \cap V \subset W$.
 - ii. We have $V \subset [U, W]_X$.
- 3. Associativity. The diagram

01H9

01HA

01HB 01HC

01HD

01HE

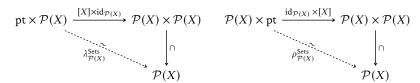

0042

commutes, i.e. we have an equality of sets

$$(U \cap V) \cap W = U \cap (V \cap W)$$

for each $U, V, W \in \mathcal{P}(X)$.

4. Unitality. The diagrams

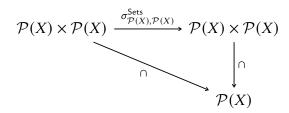

commute, i.e. we have equalities of sets

$$X \cap U = U$$
,

$$U \cap X = U$$

for each $U \in \mathcal{P}(X)$.

5. Commutativity. The diagram

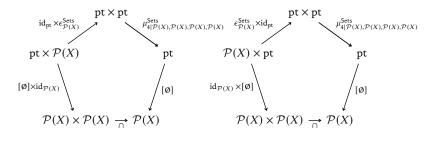

commutes, i.e. we have an equality of sets

$$U \cap V = V \cap U$$

for each $U, V \in \mathcal{P}(X)$.

6. Annihilation With the Empty Set. The diagrams

0043

0044

0047

commute, i.e. we have equalities of sets

$$\emptyset \cap X = \emptyset$$
,

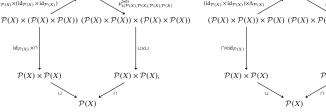

$$X \cap \emptyset = \emptyset$$

for each $U \in \mathcal{P}(X)$.

01HF 7. Distributivity of Unions Over Intersections. The diagrams

0046

 $(\mathcal{P}(X) \times \mathcal{P}(X)) \times (\mathcal{P}(X) \times \mathcal{P}(X)) \times (\mathcal{P}(X) \times \mathcal{P}(X)) \\ \Delta_{\mathcal{P}(X)} \times (\mathrm{id}_{\mathcal{P}(X)} \times \mathrm{id}_{\mathcal{P}(X)}) \times (\mathcal{P}(X) \times \mathcal{P}(X)) \times (\mathcal{P}(X) \times \mathcal{P}(X) \times \mathcal{P}(X) \times (\mathcal{P}(X) \times \mathcal{P}(X)) \times (\mathcal{P}(X) \times \mathcal{P}(X)) \times (\mathcal{P}(X) \times \mathcal{P}(X) \times \mathcal{P}(X) \times (\mathcal{P}(X) \times \mathcal{P}(X)) \times (\mathcal{P}(X) \times \mathcal{P}(X)) \times (\mathcal{P}(X) \times \mathcal{P}(X) \times \mathcal{P}(X) \times (\mathcal{P}(X) \times \mathcal{P}(X)) \times (\mathcal{P}(X) \times \mathcal{P}(X) \times \mathcal{P}(X) \times (\mathcal{P}(X) \times \mathcal{P}(X)) \times (\mathcal{P}(X) \times \mathcal{P}(X) \times \mathcal{P}(X) \times (\mathcal{P}(X) \times \mathcal{P}(X)) \times (\mathcal{P}(X) \times \mathcal{P}(X) \times \mathcal{P}(X) \times (\mathcal{P}(X) \times \mathcal{P}(X) \times \mathcal{P}(X) \times (\mathcal{P}(X) \times \mathcal{P}(X)) \times (\mathcal{P}(X) \times \mathcal{P}(X) \times \mathcal{P}(X) \times \mathcal{P}(X) \times (\mathcal{P}(X) \times \mathcal{P}(X) \times \mathcal{P}(X) \times \mathcal{P}(X) \times$

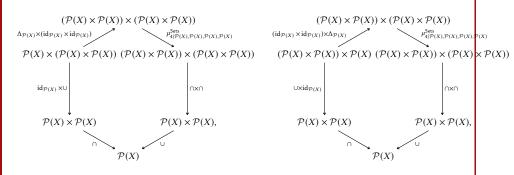

commute, i.e. we have equalities of sets

$$U \cup (V \cap W) = (U \cup V) \cap (U \cup W),$$

$$(U \cap V) \cup W = (U \cup W) \cap (V \cup W)$$

for each $U, V, W \in \mathcal{P}(X)$.

8. Distributivity of Intersections Over Unions. The diagrams

commute, i.e. we have equalities of sets

$$U \cap (V \cup W) = (U \cap V) \cup (U \cap W),$$

$$(U \cup V) \cap W = (U \cap W) \cup (V \cap W)$$

for each $U, V, W \in \mathcal{P}(X)$.

0045

0048

0049

01HG

9. Idempotency. The diagram

$$\mathcal{P}(X) \xrightarrow{\Delta_{\mathcal{P}(X)}} \mathcal{P}(X) \times \mathcal{P}(X)$$

$$\downarrow \cap$$

$$\mathcal{P}(X)$$

commutes, i.e. we have an equality of sets

$$U \cap U = U$$

for each $U \in \mathcal{P}(X)$.

10. Interaction With Characteristic Functions I. We have

$$\chi_{U\cap V}=\chi_U\chi_V$$

for each $U, V \in \mathcal{P}(X)$.

11. Interaction With Characteristic Functions II. We have

$$\chi_{U\cap V} = \min(\chi_U, \chi_V)$$

for each $U, V \in \mathcal{P}(X)$.

12. *Interaction With Direct Images.* Let $f: X \to Y$ be a function. We have a natural transformation

with components

$$f_!(U \cap V) \subset f_!(U) \cap f_!(V)$$

indexed by $U, V \in \mathcal{P}(X)$.

01HH

13. *Interaction With Inverse Images.* Let $f: X \to Y$ be a function. The diagram

$$\mathcal{P}(Y) \times \mathcal{P}(Y) \xrightarrow{f^{-1} \times f^{-1}} \mathcal{P}(X) \times \mathcal{P}(X)$$

$$\uparrow \qquad \qquad \qquad \downarrow \cap$$

$$\mathcal{P}(Y) \xrightarrow{f^{-1}} \mathcal{P}(X)$$

commutes, i.e. we have

$$f^{-1}(U \cap V) = f^{-1}(U) \cap f^{-1}(V)$$

for each $U, V \in \mathcal{P}(Y)$.

01HJ

14. Interaction With Codirect Images. Let $f: X \to Y$ be a function. The diagram

$$\mathcal{P}(X) \times \mathcal{P}(X) \xrightarrow{f_* \times f_*} \mathcal{P}(Y) \times \mathcal{P}(Y)$$

$$\uparrow \qquad \qquad \qquad \downarrow \cap$$

$$\mathcal{P}(X) \xrightarrow{f_*} \mathcal{P}(Y)$$

commutes, i.e. we have

$$f_*(U) \cap f_*(V) = f_*(U \cap V)$$

for each $U, V \in \mathcal{P}(X)$.

004A

15. *Interaction With Powersets and Monoids With Zero.* The quadruple $((\mathcal{P}(X), \emptyset), \cap, X)$ is a commutative monoid with zero.

004B

16. Interaction With Powersets and Semirings. The quintuple $(\mathcal{P}(X), \cup, \cap, \emptyset, X)$ is an idempotent commutative semiring.

PROOF 4.3.9.1.3 ► PROOF OF PROPOSITION 4.3.9.1.2 Item 1: Functoriality See [Pro25al]. Item 2: Adjointness See [MSE 267469]. Item 3: Associativity See [Pro25r]. Item 4: Unitality This follows from [Pro25v] and Item 5. Item 5: Commutativity See [Pro25s]. Item 6: Annihilation With the Empty Set This follows from [Pro25t] and Item 5. Item 7: Distributivity of Unions Over Intersections See [Pro25az]. Item 8: Distributivity of Intersections Over Unions See [Pro25aj]. Item 9: Idempotency See [Pro25ak]. Item 14: Interaction With Codirect Images

This is a repetition of Item 6 of Proposition 4.6.3.1.7 and is proved there.

Item 15: Interaction With Powersets and Monoids With Zero

This follows from Items 3 to 6.

Item 16: Interaction With Powersets and Semirings

This follows from Items 2 to 4 and 8 and Items 3 to 6 and 8 of Proposition 4.3.9.1.2.

004D 4.3.10 Differences

Let *X* and *Y* be sets.

004E DEFINITION 4.3.10.1.1 ► DIFFERENCES

The **difference of** X **and** Y is the set $X \setminus Y$ defined by

$$X \setminus Y \stackrel{\text{def}}{=} \{ a \in X \mid a \notin Y \}.$$

004F PROPOSITION 4.3.10.1.2 ▶ PROPERTIES OF DIFFERENCES

Let *X* be a set.

004G

01HK

01HL 01HM 1. Functoriality. The assignments $U,V,(U,V)\mapsto U\cap V$ define functors

$$U \setminus -: \qquad (\mathcal{P}(X), \supset) \qquad \to (\mathcal{P}(X), \subset),$$

$$- \setminus V: \qquad (\mathcal{P}(X), \subset) \qquad \to (\mathcal{P}(X), \subset),$$

$$-_1 \setminus -_2: (\mathcal{P}(X) \times \mathcal{P}(X), \subset \times \supset) \to (\mathcal{P}(X), \subset).$$

In particular, the following statements hold for each $U, V, A, B \in \mathcal{P}(X)$:

- (a) If $U \subset A$, then $U \setminus V \subset A \setminus V$.
- (b) If $V \subset B$, then $U \setminus B \subset U \setminus V$.
- (c) If $U \subset A$ and $V \subset B$, then $U \setminus B \subset A \setminus V$.

2. De Morgan's Laws. We have equalities of sets

$$X \setminus (U \cup V) = (X \setminus U) \cap (X \setminus V),$$

$$X \setminus (U \cap V) = (X \setminus U) \cup (X \setminus V)$$

for each $U, V \in \mathcal{P}(X)$.

004J

3. Interaction With Unions I. We have equalities of sets

$$U \setminus (V \cup W) = (U \setminus V) \cap (U \setminus W)$$

for each $U, V, W \in \mathcal{P}(X)$.

004K

4. Interaction With Unions II. We have equalities of sets

$$(U \setminus V) \cup W = (U \cup W) \setminus (V \setminus W)$$

for each $U, V, W \in \mathcal{P}(X)$.

004L

5. Interaction With Unions III. We have equalities of sets

$$U \setminus (V \cup W) = (U \cup W) \setminus (V \cup W)$$
$$= (U \setminus V) \setminus W$$
$$= (U \setminus W) \setminus V$$

for each $U, V, W \in \mathcal{P}(X)$.

004M

6. *Interaction With Unions IV.* We have equalities of sets

$$(U \cup V) \setminus W = (U \setminus W) \cup (V \setminus W)$$

for each $U, V, W \in \mathcal{P}(X)$.

004N

7. Interaction With Intersections. We have equalities of sets

$$(U \setminus V) \cap W = (U \cap W) \setminus V$$
$$= U \cap (W \setminus V)$$

for each $U, V, W \in \mathcal{P}(X)$.

004P

8. Interaction With Complements. We have an equality of sets

$$U \setminus V = U \cap V^{\mathsf{c}}$$

for each $U, V \in \mathcal{P}(X)$.

004Q

9. Interaction With Symmetric Differences. We have an equality of sets

$$U \setminus V = U \triangle (U \cap V)$$

for each $U, V \in \mathcal{P}(X)$.

004R

10. Triple Differences. We have

$$U \setminus (V \setminus W) = (U \cap W) \cup (U \setminus V)$$

for each $U, V, W \in \mathcal{P}(X)$.

004S

11. Left Annihilation. We have

$$\emptyset \setminus U = \emptyset$$

for each $U \in \mathcal{P}(X)$.

004T

12. Right Unitality. We have

$$U \setminus \emptyset = U$$

for each $U \in \mathcal{P}(X)$.

01HN

13. Right Annihilation. We have

$$U \setminus X = \emptyset$$

for each $U \in \mathcal{P}(X)$.

004U

14. Invertibility. We have

$$U \setminus U = \emptyset$$

for each $U \in \mathcal{P}(X)$.

- 004V
- 15. *Interaction With Containment*. The following conditions are equivalent:
- 004W
- (a) We have $V \setminus U \subset W$.
- 004X
- (b) We have $V \setminus W \subset U$.
- 004Y
- 16. Interaction With Characteristic Functions. We have

$$\chi_{U\setminus V} = \chi_U - \chi_{U\cap V}$$

for each $U, V \in \mathcal{P}(X)$.

01HP

17. Interaction With Direct Images. We have a natural transformation

$$\mathcal{P}(X)^{\mathrm{op}} \times \mathcal{P}(X) \xrightarrow{f_!^{\mathrm{op}} \times f_!} \mathcal{P}(Y)^{\mathrm{op}} \times \mathcal{P}(Y) \\
\downarrow \qquad \qquad \downarrow \qquad \qquad \downarrow \\
\mathcal{P}(X) \xrightarrow{f_!} \mathcal{P}(Y)$$

with components

$$f_!(U) \setminus f_!(V) \subset f_!(U \setminus V)$$

indexed by $U, V \in \mathcal{P}(X)$.

01HQ

18. Interaction With Inverse Images. The diagram

$$\mathcal{P}(Y)^{\text{op}} \times \mathcal{P}(Y) \xrightarrow{f^{\text{op},-1} \times f^{-1}} \mathcal{P}(X)^{\text{op}} \times \mathcal{P}(X)$$

$$\downarrow \qquad \qquad \downarrow \qquad \qquad \qquad \downarrow \qquad \qquad \qquad \downarrow \qquad \qquad$$

commutes, i.e. we have

$$f^{-1}(U \setminus V) = f^{-1}(U) \setminus f^{-1}(V)$$

for each $U, V \in \mathcal{P}(X)$.

01HR

19. *Interaction With Codirect Images*. We have a natural transformation

$$\mathcal{P}(X)^{\text{op}} \times \mathcal{P}(X) \xrightarrow{f_!^{\text{op}} \times f_!} \mathcal{P}(Y)^{\text{op}} \times \mathcal{P}(Y)$$

$$\downarrow \qquad \qquad \qquad \downarrow \qquad \qquad \qquad \downarrow \qquad \qquad \qquad \downarrow \qquad \qquad \qquad \downarrow \qquad \qquad \qquad \downarrow \qquad \qquad \qquad \downarrow \qquad \qquad \qquad$$

with components

$$f_!(U) \setminus f_!(V) \subset f_!(U \setminus V)$$

indexed by $U, V \in \mathcal{P}(X)$.

PROOF 4.3.10.1.3 ► PROOF OF PROPOSITION 4.3.10.1.2

Item 1: Functoriality

See [Pro25ad] and [Pro25ah].

Item 2: De Morgan's Laws

See [Pro25k].

Item 3: Interaction With Unions I

See [Pro251].

Item 4: Interaction With Unions II

We have

$$(U \setminus V) \cup W \stackrel{\text{def}}{=} \{x \in X \mid (x \in U \text{ and } x \notin V) \text{ or } x \in W\}$$

$$= \{x \in X \mid (x \in U \text{ or } x \in W) \text{ and } (x \notin V \text{ or } x \in W)\}$$

$$= \{x \in X \mid (x \in U \cup W) \text{ and not } (x \in V \text{ and } x \notin W)\}$$

$$= \{x \in X \mid (x \in U \cup W) \text{ and not } (x \in V \setminus W)\}$$

$$= \{x \in X \mid (x \in (U \cup W) \setminus (V \setminus W))\}$$

$$= (U \cup W) \setminus (V \setminus W).$$

4.3.10 Differences

135

Item 5: Interaction With Unions III

See [Pro25ai].

Item 6: Interaction With Unions IV

See [Pro25ac].

Item 7: Interaction With Intersections

See [Pro25u].

Item 8: Interaction With Complements

See [Pro25aa].

Item 9: Interaction With Symmetric Differences

See [Pro25ab].

Item 10: Triple Differences

See [Pro25ag].

Item 11: Left Annihilation

The direction $\emptyset \subset \emptyset \setminus U$ always holds. Now assume $x \in \emptyset \setminus U$. Then, $x \in \emptyset$ and $x \notin U$. Hence $\emptyset \setminus U \subset \emptyset$ must hold and the sets are equal.

Item 12: Right Unitality

See [Pro25ae].

Item 13: Right Annihilation

It suffices to show that no $x \in X$ can be an element of $U \setminus X$. Assume $x \in U \setminus X$. Then $x \notin X$, contradicting $x \in X$. This completes the proof.

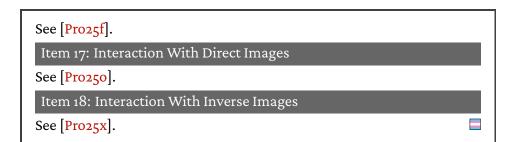

Item 14: Invertibility

See [Pro25af].

Item 15: Interaction With Containment

The conditions are symmetric in U, W, hence it suffices to show that $V \setminus U \subset W$ implies $V \setminus W \subset U$. So assume $V \setminus U \subset W, x \in V \setminus W$. Then $x \in V, x \notin W$. So by contraposition, $x \notin V \setminus U$. But $x \in V$, so we must have $x \in U$, completing the proof.

Item 16: Interaction With Characteristic Functions

004Z 4.3.11 Complements

Let X be a set and let $U \in \mathcal{P}(X)$.

0050 DEFINITION 4.3.11.1.1 ► COMPLEMENTS

The **complement of** U is the set U^{c} defined by

$$U^{\mathsf{c}} \stackrel{\text{def}}{=} X \setminus U$$

$$\stackrel{\text{def}}{=} \{ a \in X \mid a \notin U \}.$$

0051 PROPOSITION 4.3.11.1.2 ➤ PROPERTIES OF COMPLEMENTS

Let *X* be a set.

0052

1. Functoriality. The assignment $U \mapsto U^{c}$ defines a functor

$$(-)^{c} \colon \mathcal{P}(X)^{op} \to \mathcal{P}(X).$$

In particular, the following statements hold for each $U, V \in \mathcal{P}(X)$:

$$(\star)$$
 If $U \subset V$, then $V^{c} \subset U^{c}$.

2. *De Morgan's Laws*. The diagrams

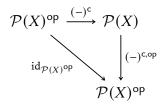

commute, i.e. we have equalities of sets

$$(U \cup V)^{c} = U^{c} \cap V^{c},$$

$$(U \cap V)^{c} = U^{c} \cup V^{c}$$

for each $U, V \in \mathcal{P}(X)$.

3. Involutority. The diagram

commutes, i.e. we have

$$(U^{\mathsf{c}})^{\mathsf{c}} = U$$

for each $U \in \mathcal{P}(X)$.

4. Interaction With Characteristic Functions. We have

$$\chi_{U^c} = 1 - \chi_U$$

for each $U \in \mathcal{P}(X)$.

5. Interaction With Direct Images. Let $f: X \to Y$ be a function. The diagram

$$\mathcal{P}(X)^{\text{op}} \xrightarrow{f_*^{\text{op}}} \mathcal{P}(Y)^{\text{op}} \\
\xrightarrow{(-)^c} \qquad \qquad \downarrow^{(-)^c} \\
\mathcal{P}(X) \xrightarrow{f_!} \mathcal{P}(Y)$$

commutes, i.e. we have

$$f_!(U^{\mathsf{c}}) = f_*(U)^{\mathsf{c}}$$

for each $U \in \mathcal{P}(X)$.

0054

0055

01HS

01HT

6. Interaction With Inverse Images. Let $f: X \to Y$ be a function. The diagram

$$\mathcal{P}(Y)^{\mathsf{op}} \xrightarrow{f^{-1,\mathsf{op}}} \mathcal{P}(X)^{\mathsf{op}}$$

$$\downarrow^{(-)^{\mathsf{c}}} \qquad \qquad \downarrow^{(-)^{\mathsf{c}}}$$

$$\mathcal{P}(Y) \xrightarrow{f^{-1}} \mathcal{P}(X)$$

commutes, i.e. we have

$$f^{-1}(U^{\mathsf{c}}) = f^{-1}(U)^{\mathsf{c}}$$

for each $U \in \mathcal{P}(X)$.

01HU

7. Interaction With Codirect Images. Let $f: X \to Y$ be a function. The diagram

$$\mathcal{P}(X)^{\text{op}} \xrightarrow{f_!^{\text{op}}} \mathcal{P}(Y)^{\text{op}}$$

$$(-)^{\text{c}} \downarrow \qquad \qquad \downarrow (-)^{\text{c}}$$

$$\mathcal{P}(X) \xrightarrow{f_*} \mathcal{P}(Y)$$

commutes, i.e. we have

$$f_*(U^{\mathsf{c}}) = f_!(U)^{\mathsf{c}}$$

for each $U \in \mathcal{P}(X)$.

PROOF 4.3.11.1.3 ► PROOF OF PROPOSITION 4.3.11.1.2

Item 1: Functoriality

This follows from Item 1 of Proposition 4.3.10.1.2.

Item 2: De Morgan's Laws

See [Pro25k].

Item 3: Involutority

See [Pro25i].

Item 4: Interaction With Characteristic Functions

We consider the two cases $x \in U, x \notin U$.

1. If $x \in U$, then $x \notin U^c$. So $\chi_U(x) = 1$ and

$$\chi_{U^{c}}(x) = 0$$
$$= 1 - \chi_{U}(x).$$

2. If $x \notin U$, then $x \in U^{c}$. So $\chi_{U}(x) = 0$ and

$$\chi_{U^{c}}(x) = 1$$
$$= 1 - \chi_{U}(x).$$

Hence, the equation holds for all $x \in X$.

Item 5: Interaction With Direct Images

This is a repetition of Item 8 of Proposition 4.6.1.1.5 and is proved there.

Item 6: Interaction With Inverse Images

This is a repetition of Item 8 of Proposition 4.6.2.1.3 and is proved there.

Item 7: Interaction With Codirect Images

This is a repetition of Item 7 of Proposition 4.6.3.1.7 and is proved there.

0056 4.3.12 Symmetric Differences

Let X be a set and let $U, V \in \mathcal{P}(X)$.

0057 DEFINITION 4.3.12.1.1 ➤ SYMMETRIC DIFFERENCES

The **symmetric difference of** U **and** V is the set $U \triangle V$ defined by

$$U \triangle V \stackrel{\text{def}}{=} (U \setminus V) \cup (V \setminus U).$$

¹Illustration:

0058 PROPOSITION 4.3.12.1.2 ➤ PROPERTIES OF SYMMETRIC DIFFERENCES

Let *X* be a set.

1. Lack of Functoriality. The assignment $(U, V) \mapsto U \triangle V$ does not in general define functors

$$\begin{array}{ll} U \ \triangle - \colon & (\mathcal{P}(X), \subset) & \to (\mathcal{P}(X), \subset), \\ - \ \triangle \ V \colon & (\mathcal{P}(X), \subset) & \to (\mathcal{P}(X), \subset), \\ -_1 \ \triangle \ -_2 \colon (\mathcal{P}(X) \times \mathcal{P}(X), \subset \times \subset) \to (\mathcal{P}(X), \subset). \end{array}$$

2. Via Unions and Intersections. We have

$$U \triangle V = (U \cup V) \setminus (U \cap V)$$

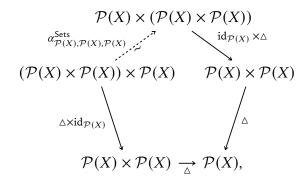

for each $U, V \in \mathcal{P}(X)$, as in the Venn diagram

$$\boxed{\bigcup_{U \, \triangle \, V}} = \boxed{\bigcup_{U \, \cup \, V}} \setminus \boxed{\bigcup_{U \, \cap \, V}}.$$

3. Symmetric Differences of Disjoint Sets. If U and V are disjoint, then we have

$$U \triangle V = U \cup V$$
.

4. Associativity. The diagram

005A

0059

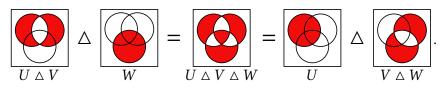

01HV

005B

commutes, i.e. we have

$$(U \triangle V) \triangle W = U \triangle (V \triangle W)$$

for each $U, V, W \in \mathcal{P}(X)$, as in the Venn diagram

005D 5. *Unitality*. The diagrams

$$\operatorname{pt} \times \mathcal{P}(X) \xrightarrow{[\varnothing] \times \operatorname{id}_{\mathcal{P}(X)}} \mathcal{P}(X) \times \mathcal{P}(X) \qquad \mathcal{P}(X) \times \operatorname{pt} \xrightarrow{\operatorname{id}_{\mathcal{P}(X)} \times [\varnothing]} \mathcal{P}(X) \times \mathcal{P}(X)$$

$$\downarrow^{\Delta} \qquad \qquad \downarrow^{\Delta} \qquad \qquad \downarrow^$$

commute, i.e. we have

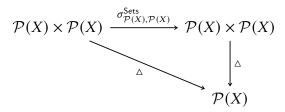

$$U \triangle \emptyset = U,$$

 $\emptyset \triangle U = U$

for each $U \in \mathcal{P}(X)$.

005C

6. Commutativity. The diagram

commutes, i.e. we have

$$U \triangle V = V \triangle U$$

for each $U, V \in \mathcal{P}(X)$.

005E

7. Invertibility. We have

$$U \triangle U = \emptyset$$

for each $U \in \mathcal{P}(X)$.

005F

8. Interaction With Unions. We have

$$(U \triangle V) \cup (V \triangle T) = (U \cup V \cup W) \setminus (U \cap V \cap W)$$

for each $U, V, W \in \mathcal{P}(X)$.

005G

9. Interaction With Complements I. We have

$$U \triangle U^{c} = X$$

for each $U \in \mathcal{P}(X)$.

005H

10. Interaction With Complements II. We have

$$U \triangle X = U^{\mathsf{c}},$$

$$X \triangle U = U^{c}$$

for each $U \in \mathcal{P}(X)$.

005J

11. Interaction With Complements III. The diagram

commutes, i.e. we have

$$U^{\mathsf{c}} \triangle V^{\mathsf{c}} = U \triangle V$$

for each $U, V \in \mathcal{P}(X)$.

005K

12. "Transitivity". We have

$$(U \triangle V) \triangle (V \triangle W) = U \triangle W$$

for each $U, V, W \in \mathcal{P}(X)$.

005L

13. The Triangle Inequality for Symmetric Differences. We have

$$U \mathbin{\vartriangle} W \subset U \mathbin{\vartriangle} V \cup V \mathbin{\vartriangle} W$$

for each $U, V, W \in \mathcal{P}(X)$.

005M

14. Distributivity Over Intersections. We have

$$U \cap (V \triangle W) = (U \cap V) \triangle (U \cap W),$$

$$(U \triangle V) \cap W = (U \cap W) \triangle (V \cap W)$$

for each $U, V, W \in \mathcal{P}(X)$.

005N

15. Interaction With Characteristic Functions. We have

$$\chi_{U \triangle V} = \chi_U + \chi_V - 2\chi_{U \cap V}$$

and thus, in particular, we have

$$\chi_{U \triangle V} \equiv \chi_U + \chi_V \pmod{2}$$

for each $U, V \in \mathcal{P}(X)$.

005P

16. *Bijectivity*. Given $U, V \in \mathcal{P}(X)$, the maps

$$U \triangle -: \mathcal{P}(X) \to \mathcal{P}(X),$$

- $\triangle V: \mathcal{P}(X) \to \mathcal{P}(X)$

are self-inverse bijections. Moreover, the map

$$\mathcal{P}(X) \longrightarrow \mathcal{P}(X)$$

$$C \longmapsto C \triangle (U \triangle V)$$

is a bijection of $\mathcal{P}(X)$ onto itself sending U to V and V to U.

005Q

17. Interaction With Powersets and Groups. Let X be a set.

005R

(a) The quadruple $(\mathcal{P}(X), \Delta, \emptyset, \mathrm{id}_{\mathcal{P}(X)})$ is an abelian group.

005S

(b) Every element of $\mathcal{P}(X)$ has order 2 with respect to \triangle , and thus $\mathcal{P}(X)$ is a *Boolean group* (i.e. an abelian 2-group).

005T

18. Interaction With Powersets and Vector Spaces I. The pair $(\mathcal{P}(X), \alpha_{\mathcal{P}(X)})$ consisting of

• The group $\mathcal{P}(X)$ of Item 17;

• The map $\alpha_{\mathcal{P}(X)} \colon \mathbb{F}_2 \times \mathcal{P}(X) \to \mathcal{P}(X)$ defined by

$$0 \cdot U \stackrel{\text{def}}{=} \emptyset,$$

$$1 \cdot U \stackrel{\text{def}}{=} U;$$

is an \mathbb{F}_2 -vector space.

(b) We have

005U

19. *Interaction With Powersets and Vector Spaces II.* If *X* is finite, then:

020L

(a) The set of singletons sets on the elements of X forms a basis for the \mathbb{F}_2 -vector space $(\mathcal{P}(X), \alpha_{\mathcal{P}(X)})$ of Item 18.

020M

$$\dim(\mathcal{P}(X)) = \#X.$$

005V

20. Interaction With Powersets and Rings. The quintuple $(\mathcal{P}(X), \triangle, \cap, \emptyset, X)$ is a commutative ring.²

01HW

21. Interaction With Direct Images. We have a natural transformation

with components

$$f_!(U) \vartriangle f_!(V) \subset f_!(U \vartriangle V)$$

indexed by $U, V \in \mathcal{P}(X)$.

01HX

22. Interaction With Inverse Images. The diagram

$$\begin{array}{ccc} \mathcal{P}(Y)^{\mathrm{op}} \times \mathcal{P}(Y) & \xrightarrow{f^{\mathrm{op},-1} \times f^{-1}} & \mathcal{P}(X)^{\mathrm{op}} \times \mathcal{P}(X) \\ & & & & \downarrow^{\triangle} \\ & & \mathcal{P}(Y) & \xrightarrow{f^{-1}} & \mathcal{P}(X) \end{array}$$

i.e. we have

$$f^{-1}(U) \triangle f^{-1}(V) = f^{-1}(U \triangle V)$$

for each $U, V \in \mathcal{P}(Y)$.

01HY

23. Interaction With Codirect Images. We have a natural transformation

$$\mathcal{P}(X)^{\mathrm{op}} \times \mathcal{P}(X) \xrightarrow{f_*^{\mathrm{op}} \times f_*} \mathcal{P}(Y)^{\mathrm{op}} \times \mathcal{P}(Y)$$

$$\downarrow^{\triangle} \qquad \qquad \downarrow^{\triangle}$$

$$\mathcal{P}(X) \xrightarrow{f_*} \mathcal{P}(Y)$$

with components

$$f_*(U \triangle V) \subset f_*(U) \triangle f_*(V)$$

indexed by $U, V \in \mathcal{P}(X)$.

¹Here are some examples:

i. When $X = \emptyset$, we have an isomorphism of groups between $\mathcal{P}(\emptyset)$ and the trivial group:

$$(\mathcal{P}(\emptyset), \triangle, \emptyset, \mathrm{id}_{\mathcal{P}(\emptyset)}) \cong \mathsf{pt}.$$

020J

020H

ii. When X = pt, we have an isomorphism of groups between $\mathcal{P}(pt)$ and $\mathbb{Z}_{/2}$:

$$(\mathcal{P}(\mathsf{pt}), \Delta, \emptyset, \mathrm{id}_{\mathcal{P}(\mathsf{pt})}) \cong \mathbb{Z}_{/2}.$$

020K

iii. When $X = \{0, 1\}$, we have an isomorphism of groups between $\mathcal{P}(\{0, 1\})$ and

$$(\mathcal{P}(\{0,1\}), \triangle, \emptyset, \mathrm{id}_{\mathcal{P}(\{0,1\})}) \cong \mathbb{Z}_{/2} \times \mathbb{Z}_{/2}.$$

Warning: The analogous statement replacing intersections by unions (i.e. that the quintuple $(\mathcal{P}(X), \triangle, \cup, \emptyset, X)$ is a ring) is false, however. See [Pro25aw] for a proof.

PROOF 4.3.12.1.3 ► PROOF OF PROPOSITION 4.3.12.1.2

Item 1: Lack of Functoriality

Let $X = \{0, 1\}$, $U = \{0\}$. Then $\emptyset \subset U$, but $U \triangle \emptyset = U \not\subset \emptyset = U \triangle U$ from Item 5 and Item 7. This gives a counterexample to the first statement. By using Item 6, we can adapt it to the second and third statement.

Item 2: Via Unions and Intersections

See [Pro25m].

Item 3: Symmetric Differences of Disjoint Sets

Since U and V are disjoint, we have $U \cap V = \emptyset$, and therefore we have

$$U \triangle V = (U \cup V) \setminus (U \cap V)$$
$$= (U \cup V) \setminus \emptyset$$
$$= U \cup V,$$

where we've used Item 2 and Item 12 of Proposition 4.3.10.1.2.

Item 4: Associativity

See [Pro25ao].

Item 5: Unitality

This follows from Item 6 and [Pro25at].

Item 6: Commutativity

See [Pro25ap].

Item 7: Invertibility

See [Pro25av].

Item 8: Interaction With Unions

See [Pro25bc].

Item 9: Interaction With Complements I

See [Pro25as].

Item 10: Interaction With Complements II

This follows from Item 6 and [Pro25ax].

Item 11: Interaction With Complements III

See [Pro25aq].

Item 12: "Transitivity"

We have

$$(U \triangle V) \triangle (V \triangle W) = U \triangle (V \triangle (V \triangle W)) \quad \text{(by Item 4)}$$

$$= U \triangle ((V \triangle V) \triangle W) \quad \text{(by Item 4)}$$

$$= U \triangle (\emptyset \triangle W) \quad \text{(by Item 7)}$$

$$= U \triangle W. \quad \text{(by Item 5)}$$

This finishes the proof.

Item 13: The Triangle Inequality for Symmetric Differences

This follows from Items 2 and 12.

Item 14: Distributivity Over Intersections

See [Pro25q].

Item 15: Interaction With Characteristic Functions

See [Pro25g].

Item 16: Bijectivity

• We show that

$$(U \triangle -): \mathcal{P}(X) \to \mathcal{P}(X)$$

is self-inverse.

Let $W \in \mathcal{P}(X)$. Then,

$$U \triangle (U \triangle W) = (U \triangle U) \triangle W$$
 (by Item 4)
= $\emptyset \triangle W$ (by Item 7)
= W . (by Item 5)

• By Item 6, $(-\triangle V) = (V \triangle -)$, hence the former is also self-inverse by the first point.

• The map $- \triangle (U \triangle V)$ is a bijection as a special case of the second point. From the first two points and Item 6, we get

$$U \triangle (U \triangle V) = V$$
, $V \triangle (U \triangle V) = V \triangle (V \triangle U) = U$.

Hence the function maps U to V and V to U.

Item 17: Interaction With Powersets and Groups

Item 17a follows from Items 4 to 7, while Item 17b follows from Item 7.1

Item 18: Interaction With Powersets and Vector Spaces I

See [MSE 2719059].

Item 19: Interaction With Powersets and Vector Spaces II

See [MSE 2719059].

Item 20: Interaction With Powersets and Rings

This follows from Items 6 and 15 of Proposition 4.3.9.1.2 and Items 14 and 17.2

Item 21: Interaction With Direct Images

This is a repetition of Item 9 of Proposition 4.6.1.1.5 and is proved there.

Item 22: Interaction With Inverse Images

This is a repetition of Item 9 of Proposition 4.6.2.1.3 and is proved there.

Item 23: Interaction With Codirect Images

This is a repetition of Item 8 of Proposition 4.6.3.1.7 and is proved there.

²Reference: [Pro25au].

905W 4.4 Powersets

01HZ 4.4.1 Foundations

Let X be a set.

4.4.1 Foundations

006P DEFINITION 4.4.1.1.1 ▶ POWERSETS

006Q

01J1

01J2

The **powerset of** X is the set $\mathcal{P}(X)$ defined by

$$\mathcal{P}(X) \stackrel{\text{def}}{=} \{ U \in P \mid U \subset X \},\$$

149

where P is the set in the axiom of powerset, ?? of ??.

REMARK 4.4.1.1.2 ► POWERSETS AS DECATEGORIFICATIONS OF CO/PRESHEAF CATE-GORIES

Under the analogy that $\{t, f\}$ should be the (-1)-categorical analogue of Sets, we may view the powerset of a set as a decategorification of the category of presheaves of a category (or of the category of copresheaves):

• The powerset of a set X is equivalently (Item 2 of Proposition 4.5.1.1.4) the set

$$Sets(X, \{t, f\})$$

of functions from X to the set $\{t, f\}$ of classical truth values.

- The category of presheaves on a category ${\cal C}$ is the category

$$\operatorname{\mathsf{Fun}}(\mathcal{C}^{\operatorname{\mathsf{op}}},\operatorname{\mathsf{Sets}})$$

of functors from C^{op} to the category Sets of sets.

01J0 NOTATION 4.4.1.1.3 ► FURTHER NOTATION FOR POWERSETS

Let X be a set.

- 1. We write $\mathcal{P}_0(X)$ for the set of nonempty subsets of X.
- 2. We write $\mathcal{P}_{fin}(X)$ for the set of finite subsets of X.

020P

0200

020R

01J5

01J6

01J7

01J8

01J3 PROPOSITION 4.4.1.1.4 ► ELEMENTARY PROPERTIES OF POWERSETS

Let X be a set.

- 01J4 1. *Co/Completeness*. The (posetal) category (associated to) $(\mathcal{P}(X), \subset)$ is complete and cocomplete:
 - (a) *Products*. The products in $\mathcal{P}(X)$ are given by intersection of subsets.
 - (b) *Coproducts*. The coproducts in $\mathcal{P}(X)$ are given by union of subsets.
 - (c) Co/Equalisers. Being a posetal category, $\mathcal{P}(X)$ only has at most one morphisms between any two objects, so co/equalisers are trivial.
 - 2. Cartesian Closedness. The category $\mathcal{P}(X)$ is Cartesian closed.
 - 3. Powersets as Sets of Relations. We have bijections

$$\mathcal{P}(X) \cong \text{Rel}(\text{pt}, X),$$

 $\mathcal{P}(X) \cong \text{Rel}(X, \text{pt}),$

natural in $X \in Obj(Sets)$.

4. Interaction With Products I. The map

$$\mathcal{P}(X) \times \mathcal{P}(Y) \longrightarrow \mathcal{P}(X \coprod Y)$$
$$(U, V) \longmapsto U \cup V$$

is an isomorphism of sets, natural in $X, Y \in \text{Obj}(\mathsf{Sets})$ with respect to each of the functor structures $\mathcal{P}_!$, \mathcal{P}^{-1} , and \mathcal{P}_* on \mathcal{P} of Proposition 4.4.2.1.1. Moreover, this makes each of $\mathcal{P}_!$, \mathcal{P}^{-1} , and \mathcal{P}_* into a symmetric monoidal functor.

5. Interaction With Products II. The map

$$\mathcal{P}(X) \times \mathcal{P}(Y) \longrightarrow \mathcal{P}(X \coprod Y)$$
$$(U, V) \longmapsto U \boxtimes_{X \times Y} V,$$

where1

$$U \boxtimes_{X \times Y} V \stackrel{\text{def}}{=} \{(u, v) \in X \times Y \mid u \in U \text{ and } v \in V\}$$

is an inclusion of sets, natural in $X,Y\in Obj(Sets)$ with respect to each of the functor structures $\mathcal{P}_!,\mathcal{P}^{-1}$, and \mathcal{P}_* on \mathcal{P} of Proposition 4.4.2.1.1. Moreover, this makes each of $\mathcal{P}_!,\mathcal{P}^{-1}$, and \mathcal{P}_* into a symmetric monoidal functor.

6. Interaction With Products III. We have an isomorphism

$$\mathcal{P}(X) \otimes \mathcal{P}(Y) \cong \mathcal{P}(X \times Y),$$

natural in $X, Y \in \text{Obj}(\mathsf{Sets})$ with respect to each of the functor structures $\mathcal{P}_!, \mathcal{P}^{-1}$, and \mathcal{P}_* on \mathcal{P} of Proposition 4.4.2.1.1, where \otimes denotes the tensor product of suplattices of ??. Moreover, this makes each of $\mathcal{P}_!, \mathcal{P}^{-1}$, and \mathcal{P}_* into a symmetric monoidal functor.

¹The set $U \boxtimes_{X \times Y} V$ is usually denoted simply $U \times V$. Here we denote it in this somewhat weird way to highlight the similarity to external tensor products in sixfunctor formalisms (see also Section 4.6.4).

PROOF 4.4.1.1.5 ▶ PROOF OF PROPOSITION 4.4.1.1.4

Item 1: Co/Completeness

Omitted.

Item 2: Cartesian Closedness

See Section 4.4.7.

Item 3: Powersets as Sets of Relations

Indeed, we have

$$Rel(pt, X) \stackrel{\text{def}}{=} \mathcal{P}(pt \times X)$$

$$\cong \mathcal{P}(X)$$

01J9

and

$$Rel(X, pt) \stackrel{\text{def}}{=} \mathcal{P}(X \times pt)$$

 $\cong \mathcal{P}(X),$

where we have used Item 5 of Proposition 4.1.3.1.4.

Item 4: Interaction With Products I

The inverse of the map in the statement is the map

$$\Phi \colon \mathcal{P}(X \mid \mid Y) \to \mathcal{P}(X) \times \mathcal{P}(Y)$$

defined by

$$\Phi(S) \stackrel{\text{def}}{=} (S_X, S_Y)$$

for each $S \in \mathcal{P}(X \coprod Y)$, where

$$S_X \stackrel{\text{def}}{=} \{x \in X \mid (0, x) \in S\}$$
$$S_Y \stackrel{\text{def}}{=} \{y \in Y \mid (1, y) \in S\}.$$

The rest of the proof is omitted.

Item 5: Interaction With Products II

Omitted.

Item 6: Interaction With Products III

Omitted.

01JA 4.4.2 Functoriality of Powersets

O1 JB PROPOSITION 4.4.2.1.1 ► FUNCTORIALITY OF POWERSETS

Let X be a set.

01JC

1. Functoriality I. The assignment $X \mapsto \mathcal{P}(X)$ defines a functor

$$\mathcal{P}_1 \colon \mathsf{Sets} \to \mathsf{Sets}$$

where

• Action on Objects. For each $A \in Obj(Sets)$, we have

$$\mathcal{P}_!(A) \stackrel{\text{def}}{=} \mathcal{P}(A).$$

• *Action on Morphisms*. For each $A, B \in Obj(Sets)$, the action on morphisms

$$\mathcal{P}_{*|A,B} \colon \mathsf{Sets}(A,B) \to \mathsf{Sets}(\mathcal{P}(A),\mathcal{P}(B))$$

of $\mathcal{P}_!$ at (A, B) is the map defined by by sending a map of sets $f: A \to B$ to the map

$$\mathcal{P}_!(f) \colon \mathcal{P}(A) \to \mathcal{P}(B)$$

defined by

$$\mathcal{P}_!(f) \stackrel{\text{def}}{=} f_!,$$

as in Definition 4.6.1.1.1.

2. Functoriality II. The assignment $X \mapsto \mathcal{P}(X)$ defines a functor

$$\mathcal{P}^{-1}$$
: Sets^{op} \rightarrow Sets.

where

01JD

• *Action on Objects.* For each $A \in Obj(Sets)$, we have

$$\mathcal{P}^{-1}(A) \stackrel{\text{def}}{=} \mathcal{P}(A).$$

• *Action on Morphisms*. For each $A, B \in Obj(Sets)$, the action on morphisms

$$\mathcal{P}_{A,B}^{-1} \colon \mathsf{Sets}(A,B) \to \mathsf{Sets}(\mathcal{P}(B),\mathcal{P}(A))$$

of \mathcal{P}^{-1} at (A,B) is the map defined by by sending a map of sets $f\colon A\to B$ to the map

$$\mathcal{P}^{-1}(f) \colon \mathcal{P}(B) \to \mathcal{P}(A)$$

defined by

$$\mathcal{P}^{-1}(f) \stackrel{\text{def}}{=} f^{-1},$$

as in Definition 4.6.2.1.1.

01JE

3. Functoriality III. The assignment $X \mapsto \mathcal{P}(X)$ defines a functor

$$\mathcal{P}_* \colon \mathsf{Sets} \to \mathsf{Sets}$$

where

• *Action on Objects.* For each $A \in Obj(Sets)$, we have

$$\mathcal{P}_*(A) \stackrel{\text{def}}{=} \mathcal{P}(A).$$

• Action on Morphisms. For each $A, B \in \mathsf{Obj}(\mathsf{Sets})$, the action on morphisms

$$\mathcal{P}_{!|A,B} \colon \mathsf{Sets}(A,B) \to \mathsf{Sets}(\mathcal{P}(A),\mathcal{P}(B))$$

of \mathcal{P}_* at (A,B) is the map defined by by sending a map of sets $f\colon A\to B$ to the map

$$\mathcal{P}_*(f) \colon \mathcal{P}(A) \to \mathcal{P}(B)$$

defined by

$$\mathcal{P}_*(f) \stackrel{\text{def}}{=} f_*,$$

as in Definition 4.6.3.1.1.

PROOF 4.4.2.1.2 ► PROOF OF PROPOSITION 4.4.2.1.1

Item 1: Functoriality I

This follows from Items 3 and 4 of Proposition 4.6.1.1.7.

Item 2: Functoriality II

This follows from Items 3 and 4 of Proposition 4.6.2.1.5.

Item 3: Functoriality III

This follows from Items 3 and 4 of Proposition 4.6.3.1.9.

01JF 4.4.3 Adjointness of Powersets I

01JG PROPOSITION 4.4.3.1.1 ► ADJOINTNESS OF POWERSETS I

We have an adjunction

$$(\mathcal{P}^{-1} \dashv \mathcal{P}^{-1,op})$$
: Sets^{op} $\underbrace{\overset{\mathcal{P}^{-1}}{\downarrow}}_{\mathcal{P}^{-1,op}}$ Sets,

witnessed by a bijection

$$\underbrace{\mathsf{Sets}^{\mathsf{op}}(\mathcal{P}(X),Y)}_{\overset{\mathsf{def}}{=}\mathsf{Sets}(Y,\mathcal{P}(X))} \cong \mathsf{Sets}(X,\mathcal{P}(Y)),$$

natural in $X \in Obj(Sets)$ and $Y \in Obj(Sets^{op})$.

PROOF 4.4.3.1.2 ► PROOF OF PROPOSITION 4.4.3.1.1

We have

Sets^{op}($\mathcal{P}(A), B$) $\stackrel{\text{def}}{=}$ Sets($B, \mathcal{P}(A)$) $\cong \text{Sets}(B, \text{Sets}(A, \{t, f\})) \text{ (by Item 2 of Proposition 4.5.1.1.4)}$ $\cong \text{Sets}(A \times B, \{t, f\}) \text{ (by Item 2 of Proposition 4.1.3.1.4)}$ $\cong \text{Sets}(A, \text{Sets}(B, \{t, f\})) \text{ (by Item 2 of Proposition 4.1.3.1.4)}$ $\cong \text{Sets}(A, \mathcal{P}(B)), \text{ (by Item 2 of Proposition 4.5.1.1.4)}$

where all bijections are natural in A and B.

¹Here we are using Item 3 of Proposition 4.5.1.1.4.

01JH 4.4.4 Adjointness of Powersets II

PROPOSITION 4.4.4.1.1 ► ADJOINTNESS OF POWERSETS II

We have an adjunction

$$(Gr\dashv \mathcal{P}_!)\colon \ \ \mathsf{Sets}\underbrace{\overset{Gr}{\underset{\mathcal{P}_l}{\longleftarrow}}}_{\mathsf{Rel},}$$

witnessed by a bijection of sets

$$Rel(Gr(X), Y) \cong Sets(X, \mathcal{P}(Y))$$

natural in $X \in \text{Obj}(\mathsf{Sets})$ and $Y \in \text{Obj}(\mathsf{Rel})$, where Gr is the graph functor of Relations, Item 1 of Proposition 8.2.2.1.2 and $\mathcal{P}_!$ is the functor of Relations, Proposition 8.7.5.1.1.

PROOF 4.4.4.1.2 ► PROOF OF PROPOSITION 4.4.4.1.1

We have

$$Rel(Gr(A), B) \cong \mathcal{P}(A \times B)$$

$$\cong Sets(A \times B, \{t, f\}) \qquad \text{(by Item 2 of Proposition 4.5.1.1.4)}$$

$$\cong Sets(A, Sets(B, \{t, f\})) \qquad \text{(by Item 2 of Proposition 4.1.3.1.4)}$$

$$\cong Sets(A, \mathcal{P}(B)), \qquad \text{(by Item 2 of Proposition 4.5.1.1.4)}$$

where all bijections are natural in A, (where we are using Item 3 of Proposition 4.5.1.1.4). Explicitly, this isomorphism is given by sending a relation R: $Gr(A) \to B$ to the map $R^{\dagger} : A \to \mathcal{P}(B)$ sending a to the subset R(a) of B, as in Relations, Definition 8.1.1.1.1.

Naturality in *B* is then the statement that given a relation $R: B \rightarrow B'$,

the diagram

$$\operatorname{Rel}(\operatorname{Gr}(A),B) \xrightarrow{R \diamond -} \operatorname{Rel}(\operatorname{Gr}(A),B')$$

$$\downarrow \qquad \qquad \downarrow \qquad \qquad \downarrow$$

commutes, which follows from Relations, Remark 8.7.1.1.3.

01JK 4.4.5 Powersets as Free Cocompletions

Let X be a set.

01JL

PROPOSITION 4.4.5.1.1 ➤ POWERSETS AS FREE COCOMPLETIONS: UNIVERSAL PROP-ERTY

The pair $(\mathcal{P}(X), \chi_{(-)})$ consisting of

- The powerset $(\mathcal{P}(X), \subset)$ of X of Definition 4.4.1.1.1;
- The characteristic embedding $\chi_{(-)}: X \hookrightarrow \mathcal{P}(X)$ of X into $\mathcal{P}(X)$ of Definition 4.5.4.1.1;

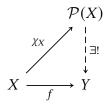

satisfies the following universal property:

- (\star) Given another pair (Y, f) consisting of
 - A suplattice (Y, \preceq) ;
 - A function $f: X \to Y$;

there exists a unique morphism of suplattices

$$(\mathcal{P}(X),\subset) \xrightarrow{\exists !} (Y,\preceq)$$

making the diagram

commute.

PROOF 4.4.5.1.2 ▶ PROOF OF PROPOSITION 4.4.5.1.1

This is a rephrasing of Proposition 4.4.5.1.3, which we prove below.

PROPOSITION 4.4.5.1.3 ➤ POWERSETS AS FREE COCOMPLETIONS: ADJOINTNESS

We have an adjunction

$$(\mathcal{P} \dashv \overline{\mathbb{k}})$$
: Sets $\underbrace{\overset{\mathcal{P}}{\vdash}}$ SupLat,

witnessed by a bijection

$$SupLat((\mathcal{P}(X), \subset), (Y, \preceq)) \cong Sets(X, Y),$$

natural in $X \in \text{Obj}(\mathsf{Sets})$ and $(Y, \preceq) \in \text{Obj}(\mathsf{SupLat})$, where:

- The category SupLat is the category of suplattices of ??.
- The map

$$\chi_X^* \colon \mathsf{SupLat}((\mathcal{P}(X), \subset), (Y, \preceq)) \to \mathsf{Sets}(X, Y)$$

witnessing the above bijection is defined by

$$\chi_X^*(f) \stackrel{\text{def}}{=} f \circ \chi_X,$$

i.e. by sending a morphism of suplattices $f \colon \mathcal{P}(X) \to Y$ to the composition

$$X \stackrel{\chi_X}{\hookrightarrow} \mathcal{P}(X) \stackrel{f}{\longrightarrow} Y.$$

• The map

$$\operatorname{Lan}_{YX} : \operatorname{\mathsf{Sets}}(X,Y) \to \operatorname{\mathsf{SupLat}}((\mathcal{P}(X),\subset),(Y,\preceq))$$

witnessing the above bijection is given by sending a function $f: X \to Y$ to its left Kan extension along χ_X ,

$$\operatorname{Lan}_{\chi_X}(f) \colon \mathcal{P}(X) \to Y, \qquad \begin{array}{c} \mathcal{P}(X) \\ \downarrow \\ X \xrightarrow{f} Y. \end{array}$$

Moreover, invoking the bijection $\mathcal{P}(X) \cong \operatorname{Sets}(X, \{t, f\})$ of Item 2 of Proposition 4.5.1.1.4, $\operatorname{Lan}_{\chi_X}(f)$ can be explicitly computed by

$$[\operatorname{Lan}_{\chi_{X}}(f)](U) = \int_{x \in X}^{x \in X} \chi_{\mathcal{D}(X)}(\chi_{x}, U) \odot f(x)$$

$$= \int_{x \in X}^{x \in X} \chi_{U}(x) \odot f(x)$$

$$= \left(\bigvee_{x \in X} (\chi_{U}(x) \odot f(x))\right) \vee \left(\bigvee_{x \in U^{c}} (\chi_{U}(x) \odot f(x))\right)$$

$$= \left(\bigvee_{x \in U} f(x)\right) \vee \left(\bigvee_{x \in U^{c}} \varnothing_{Y}\right)$$

$$= \bigvee_{x \in U} f(x)$$

for each $U \in \mathcal{P}(X)$, where:

- We have used ?? for the first equality.
- We have used Proposition 4.5.5.1.1 for the second equality.
- We have used ?? for the third equality.
- − The symbol \bigvee denotes the join in (Y, \preceq) .
- The symbol \odot denotes the tensor of an element of Y by a truth value as in $\ref{eq:condition}$. In particular, we have

true
$$\odot f(x) \stackrel{\text{def}}{=} f(x)$$
,
false $\odot f(x) \stackrel{\text{def}}{=} \varnothing_Y$,

where \emptyset_Y is the bottom element of (Y, \preceq) .

In particular, when $(Y, \preceq_Y) = (\mathcal{P}(B), \subset)$ for some set B, the Kan extension $\operatorname{Lan}_{\chi_X}(f)$ is given by

$$[\operatorname{Lan}_{\chi_X}(f)](U) = \bigvee_{x \in U} f(x)$$
$$= \bigcup_{x \in U} f(x)$$

for each $U \in \mathcal{P}(X)$.

PROOF 4.4.5.1.4 ► PROOF OF PROPOSITION 4.4.5.1.3

Map I

We define a map

$$\Phi_{X,Y} \colon \mathsf{SupLat}((\mathcal{P}(X), \subset), (Y, \preceq)) \to \mathsf{Sets}(X, Y)$$

as in the statement, i.e. by

$$\Phi_{X,Y}(f) \stackrel{\text{def}}{=} f \circ \gamma_X$$

for each $f \in \mathsf{SupLat}((\mathcal{P}(X), \subset), (Y, \preceq))$.

Map II

We define a map

$$\Psi_{X,Y} \colon \mathsf{Sets}(X,Y) \to \mathsf{SupLat}((\mathcal{P}(X),\subset),(Y,\preceq))$$

as in the statement, i.e. by

$$\Psi_{X,Y}(f) \stackrel{\text{def}}{=} \operatorname{Lan}_{\chi_X}(f), \qquad X \xrightarrow{\chi_X} \downarrow \underset{f}{\downarrow} \operatorname{Lan}_{\chi_X}(f)$$

for each $f \in Sets(X, Y)$.

Invertibility I

We claim that

$$\Psi_{X,Y} \circ \Phi_{X,Y} = id_{\mathsf{SupLat}((\mathcal{P}(X),\subset),(Y,\preceq))}$$
.

We have

$$[\Psi_{X,Y} \circ \Phi_{X,Y}](f) \stackrel{\text{def}}{=} \Psi_{X,Y}(\Phi_{X,Y}(f))$$

$$\stackrel{\text{def}}{=} \Psi_{X,Y}(f \circ \chi_X)$$

$$\stackrel{\text{def}}{=} \operatorname{Lan}_{\chi_X}(f \circ \chi_X)$$

for each $f \in \mathsf{SupLat}((\mathcal{P}(X), \subset), (Y, \preceq))$. We now claim that

$$\mathrm{Lan}_{\chi_X}(f\circ\chi_X)=f$$

for each $f \in \mathsf{SupLat}((\mathcal{P}(X), \subset), (Y, \preceq))$. Indeed, we have

$$\left[\operatorname{Lan}_{\chi_X}(f\circ\chi_X)\right](U) = \bigvee_{x\in U} f(\chi_X(x))$$

$$= f\left(\bigvee_{x \in U} \chi_X(x)\right)$$
$$= f\left(\bigcup_{x \in U} \{x\}\right)$$
$$= f(U)$$

for each $U\in\mathcal{P}(X)$, where we have used that f is a morphism of suplattices and hence preserves joins for the second equality. This proves our claim. Since we have shown that

$$[\Psi_{X,Y} \circ \Phi_{X,Y}](f) = f$$

for each $f \in \operatorname{SupLat}((\mathcal{P}(X), \subset), (Y, \preceq))$, it follows that $\Psi_{X,Y} \circ \Phi_{X,Y}$ must be equal to the identity map $\operatorname{id}_{\operatorname{SupLat}((\mathcal{P}(X), \subset), (Y, \preceq))}$ of $\operatorname{SupLat}((\mathcal{P}(X), \subset), (Y, \preceq))$.

Invertibility II

We claim that

$$\Phi_{X,Y} \circ \Psi_{X,Y} = \mathrm{id}_{\mathsf{Sets}(X,Y)}$$
.

We have

$$\begin{split} [\Phi_{X,Y} \circ \Psi_{X,Y}](f) &\stackrel{\text{def}}{=} \Phi_{X,Y}(\Psi_{X,Y}(f)) \\ &\stackrel{\text{def}}{=} \Phi_{X,Y}(\text{Lan}_{\chi_X}(f)) \\ &\stackrel{\text{def}}{=} \text{Lan}_{\chi_X}(f) \circ \chi_X \end{split}$$

for each $f \in Sets(X, Y)$. We now claim that

$$\mathrm{Lan}_{\chi_X}(f)\circ\chi_X=f$$

for each $f \in Sets(X, Y)$. Indeed, we have

$$[\operatorname{Lan}_{\chi_X}(f) \circ \chi_X](x) = \bigvee_{y \in \{x\}} f(y)$$

$$= f(x)$$

for each $x \in X$. This proves our claim. Since we have shown that

$$[\Phi_{X,Y} \circ \Psi_{X,Y}](f) = f$$

for each $f \in \mathsf{Sets}(X,Y)$, it follows that $\Phi_{X,Y} \circ \Psi_{X,Y}$ must be equal to the identity map $\mathsf{id}_{\mathsf{Sets}(X,Y)}$ of $\mathsf{Sets}(X,Y)$.

Naturality for Φ, Part I

We need to show that, given a function $f: X \to X'$, the diagram

$$\begin{split} \mathsf{SupLat}((\mathcal{P}(X'),\subset),(Y,\preceq)) & \xrightarrow{\Phi_{X',Y}} \mathsf{Sets}(X',Y) \\ & & \downarrow^{f^*} \\ \mathsf{SupLat}((\mathcal{P}(X),\subset),(Y,\preceq)) & \xrightarrow{\Phi_{X,Y}} \mathsf{Sets}(X,Y) \end{split}$$

commutes. Indeed, we have

$$[\Phi_{X,Y} \circ \mathcal{P}_{!}(f)^{*}](\xi) \stackrel{\text{def}}{=} \Phi_{X,Y}(\mathcal{P}_{!}(f)^{*}(\xi))$$

$$\stackrel{\text{def}}{=} \Phi_{X,Y}(\xi \circ f_{!})$$

$$\stackrel{\text{def}}{=} (\xi \circ f_{!}) \circ \chi_{X}$$

$$= \xi \circ (f_{!} \circ \chi_{X})$$

$$\stackrel{(\dagger)}{=} \xi \circ (\chi_{X'} \circ f)$$

$$= (\xi \circ \chi_{X'}) \circ f$$

$$\stackrel{\text{def}}{=} \Phi_{X',Y}(\xi) \circ f$$

$$\stackrel{\text{def}}{=} f^{*}(\Phi_{X',Y}(\xi))$$

$$\stackrel{\text{def}}{=} [f^{*} \circ \Phi_{X',Y}](\xi),$$

for each $\xi \in \text{SupLat}((\mathcal{P}(X'), \subset), (Y, \preceq))$, where we have used Item 1 of Proposition 4.5.4.1.3 for the fifth equality above.

Naturality for Φ , Part II

We need to show that, given a morphism of suplattices

$$g: (Y, \preceq_Y) \to (Y', \preceq_{Y'}),$$

the diagram

$$\begin{array}{c|c} \mathsf{SupLat}((\mathcal{P}(X),\subset),(Y,\preceq)) & \xrightarrow{\Phi_{X,Y}} & \mathsf{Sets}(X,Y) \\ & g_! & & \downarrow g_! \\ \\ \mathsf{SupLat}((\mathcal{P}(X),\subset),(Y',\preceq)) & \xrightarrow{\Phi_{X,Y'}} & \mathsf{Sets}(X,Y') \end{array}$$

commutes. Indeed, we have

$$\begin{split} [\Phi_{X,Y'} \circ g_!](\xi) &\stackrel{\text{def}}{=} \Phi_{X,Y'}(g_!(\xi)) \\ &\stackrel{\text{def}}{=} \Phi_{X,Y'}(g \circ \xi) \\ &\stackrel{\text{def}}{=} (g \circ \xi) \circ \chi_X \\ &= g \circ (\xi \circ \chi_X) \\ &\stackrel{\text{def}}{=} g \circ (\Phi_{X,Y}(\xi)) \\ &\stackrel{\text{def}}{=} g_!(\Phi_{X,Y}(\xi)) \\ &\stackrel{\text{def}}{=} [g_! \circ \Phi_{X,Y}](\xi). \end{split}$$

for each $\xi \in \mathsf{SupLat}((\mathcal{P}(X), \subset), (Y, \preceq))$.

Naturality for Ψ

Since Φ is natural in each argument and Φ is a componentwise inverse to Ψ in each argument, it follows from Categories, Item 2 of Proposition 11.9.7.1.2 that Ψ is also natural in each argument.

WARNING 4.4.5.1.5 ► Free Cocompletion Is Not an Idempotent Operation

Although the assignment $X \mapsto \mathcal{P}(X)$ is called the *free cocompletion of* X, it is not an idempotent operation, i.e. we have $\mathcal{P}(\mathcal{P}(X)) \neq \mathcal{P}(X)$.

01JP 4.4.6 Powersets as Free Completions

Let X be a set.

01JQ PROPOSITION 4.4.6.1.1 ➤ POWERSETS AS FREE COMPLETIONS: UNIVERSAL PROPERTY

The pair $(\mathcal{P}(X), \chi_{(-)})$ consisting of

- The powerset of X together with reverse inclusion $\mathcal{P}(X)^{\text{op}} = (\mathcal{P}(X), \supset)$ of Definition 4.4.1.1.1;
- The characteristic embedding $\chi_{(-)}: X \hookrightarrow \mathcal{P}(X)$ of X into $\mathcal{P}(X)$ of Definition 4.5.4.1.1;

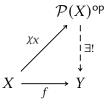

satisfies the following universal property:

- (\star) Given another pair (Y, f) consisting of
 - An inflattice (Y, \preceq) ;
 - A function $f: X \to Y$;

there exists a unique morphism of inflattices

$$(\mathcal{P}(X),\supset) \xrightarrow{\exists !} (Y,\preceq)$$

making the diagram

commute.

PROOF 4.4.6.1.2 ► PROOF OF PROPOSITION 4.4.6.1.1

This is a rephrasing of Proposition 4.4.6.1.3, which we prove below.

¹Here we only remark that the unique morphism of inflattices in the statement is given by the right Kan extension $\operatorname{Ran}_{\chi_X}(f)$ of f along χ_X .

01 JR PROPOSITION 4.4.6.1.3 ▶ POWERSETS AS FREE COMPLETIONS: ADJOINTNESS

We have an adjunction

$$(\mathcal{P} + \overline{\Sigma})$$
: Sets $\underbrace{\overset{\mathcal{P}}{\vdash}}_{\overline{\Sigma}}$ InfLat,

witnessed by a bijection

$$InfLat((\mathcal{P}(X),\supset),(Y,\preceq)) \cong Sets(X,Y),$$

natural in $X \in \text{Obj}(\mathsf{Sets})$ and $(Y, \preceq) \in \text{Obj}(\mathsf{InfLat})$, where:

- The category InfLat is the category of inflattices of ??.
- The map

$$\chi_X^* \colon \mathsf{InfLat}((\mathcal{P}(X), \supset), (Y, \preceq)) \to \mathsf{Sets}(X, Y)$$

witnessing the above bijection is defined by

$$\chi_X^*(f) \stackrel{\text{def}}{=} f \circ \chi_X,$$

i.e. by sending a morphism of inflattices $f\colon \mathcal{P}(X)^{\mathrm{op}} \to Y$ to the composition

$$X \stackrel{\chi_X}{\hookrightarrow} \mathcal{P}(X)^{\mathsf{op}} \stackrel{f}{\longrightarrow} Y.$$

• The map

$$\operatorname{Ran}_{\chi_X} \colon \mathsf{Sets}(X,Y) \to \mathsf{InfLat}((\mathcal{P}(X),\supset),(Y,\preceq))$$

witnessing the above bijection is given by sending a function $f: X \to Y$ to its right Kan extension along χ_X ,

$$\operatorname{Ran}_{\chi_X}(f) \colon \mathcal{P}(X)^{\operatorname{op}} \to Y, \qquad \begin{array}{c} \mathcal{P}(X)^{\operatorname{op}} \\ \chi_X / \text{I} & \text{I} & \text{I} \\ \chi_X / \text{I} & \text{I} \\ \chi_X / \text{I} & \text{I} \\ \chi_X / \text{I} & \text{I} & \text{I} \\ \chi_X / \text{I} & \text$$

Moreover, invoking the bijection $\mathcal{P}(X) \cong \operatorname{Sets}(X, \{t, f\})$ of Item 2 of Proposition 4.5.1.1.4, $\operatorname{Ran}_{\chi\chi}(f)$ can be explicitly computed by

$$[\operatorname{Ran}_{\chi_X}(f)](U) = \int_{x \in X} \chi_{\mathcal{P}(X)^{\operatorname{op}}}(\chi_x, U) \, \, \, \, \, f(x)$$

$$= \int_{x \in X} \chi_{\mathcal{P}(X)}(U, \chi_x) \, \, \, \, \, f(x)$$

$$= \int_{x \in X} \chi_U(x) \, \, \, \, \, f(x)$$

$$= \left(\bigwedge_{x \in U} \chi_U(x) \, \, \, \, \, f(x) \right) \wedge \left(\bigwedge_{x \in U^c} \chi_U(x) \, \, \, \, \, \, f(x) \right)$$

$$= \left(\bigwedge_{x \in U} f(x) \right) \wedge \left(\bigwedge_{x \in U^c} \omega_Y \right)$$

$$= \left(\bigwedge_{x \in U} f(x) \right) \wedge \omega_Y$$

$$= \bigwedge_{x \in U} f(x)$$

for each $U \in \mathcal{P}(X)$, where:

- We have used ?? for the first equality.
- We have used Proposition 4.5.5.1.1 for the second equality.
- We have used ?? for the third equality.

- − The symbol \land denotes the meet in (Y, \preceq) .
- The symbol \pitchfork denotes the cotensor of an element of Y by a truth value as in $\ref{eq:trutho}$. In particular, we have

true
$$\pitchfork f(x) \stackrel{\text{def}}{=} f(x)$$
, false $\pitchfork f(x) \stackrel{\text{def}}{=} \infty_Y$,

where ∞_Y is the top element of (Y, \preceq) .

In particular, when $(Y, \preceq_Y) = (\mathcal{P}(B), \subset)$ for some set B, the Kan extension $\operatorname{Ran}_{Y_X}(f)$ is given by

$$[\operatorname{Ran}_{\chi_X}(f)](U) = \bigwedge_{x \in U} f(x)$$
$$= \bigcap_{x \in U} f(x)$$

for each $U \in \mathcal{P}(X)$.

PROOF 4.4.6.1.4 ► PROOF OF PROPOSITION 4.4.5.1.3

Map I

We define a map

$$\Phi_{X,Y} : \mathsf{InfLat}((\mathcal{P}(X), \supset), (Y, \preceq)) \to \mathsf{Sets}(X, Y)$$

as in the statement, i.e. by

$$\Phi_{X,Y}(f) \stackrel{\text{def}}{=} f \circ \chi_X$$

for each $f \in InfLat((\mathcal{P}(X), \supset), (Y, \preceq))$.

Map II

We define a map

$$\Psi_{X,Y} \colon \mathsf{Sets}(X,Y) \to \mathsf{InfLat}((\mathcal{P}(X),\supset),(Y,\preceq))$$

as in the statement, i.e. by

$$\Psi_{X,Y}(f) \stackrel{\text{def}}{=} \operatorname{Ran}_{\chi_X}(f), \qquad X \xrightarrow{\chi_X} \downarrow \underset{f}{\downarrow}_{\operatorname{Ran}_{\chi_X}(f)}$$

for each $f \in Sets(X, Y)$.

Invertibility I

We claim that

$$\Psi_{X,Y} \circ \Phi_{X,Y} = id_{\mathsf{InfLat}((\mathcal{P}(X),\supset),(Y,\preceq))}$$
.

We have

$$[\Psi_{X,Y} \circ \Phi_{X,Y}](f) \stackrel{\text{def}}{=} \Psi_{X,Y}(\Phi_{X,Y}(f))$$

$$\stackrel{\text{def}}{=} \Psi_{X,Y}(f \circ \chi_X)$$

$$\stackrel{\text{def}}{=} \operatorname{Ran}_{\chi_X}(f \circ \chi_X)$$

for each $f \in \mathsf{InfLat}((\mathcal{P}(X), \supset), (Y, \preceq))$. We now claim that

$$\operatorname{Ran}_{\chi_X}(f\circ\chi_X)=f$$

for each $f \in InfLat((\mathcal{P}(X), \supset), (Y, \preceq))$. Indeed, we have

$$\begin{aligned} \left[\operatorname{Ran}_{\chi_X} (f \circ \chi_X) \right] (U) &= \bigwedge_{x \in U} f(\chi_X(x)) \\ &= f \left(\bigwedge_{x \in U} \chi_X(x) \right) \\ &= f \left(\bigcup_{x \in U} \{x\} \right) \end{aligned}$$

$$= f(U)$$

for each $U \in \mathcal{P}(X)$, where we have used that f is a morphism of inflattices and hence preserves meets in $(\mathcal{P}(X), \supset)$ (i.e. joins in $(\mathcal{P}(X), \subset)$) for the second equality. This proves our claim. Since we have shown that

$$[\Psi_{X,Y} \circ \Phi_{X,Y}](f) = f$$

for each $f \in \mathsf{InfLat}((\mathcal{P}(X),\supset),(Y,\preceq))$, it follows that $\Psi_{X,Y} \circ \Phi_{X,Y}$ must be equal to the identity map $\mathsf{id}_{\mathsf{InfLat}((\mathcal{P}(X),\supset),(Y,\preceq))}$ of $\mathsf{InfLat}((\mathcal{P}(X),\supset),(Y,\preceq))$.

Invertibility II

We claim that

$$\Phi_{X,Y} \circ \Psi_{X,Y} = \mathrm{id}_{\mathsf{Sets}(X,Y)}$$
.

We have

$$[\Phi_{X,Y} \circ \Psi_{X,Y}](f) \stackrel{\text{def}}{=} \Phi_{X,Y}(\Psi_{X,Y}(f))$$

$$\stackrel{\text{def}}{=} \Phi_{X,Y}(\operatorname{Ran}_{\chi_X}(f))$$

$$\stackrel{\text{def}}{=} \operatorname{Ran}_{\chi_X}(f) \circ \chi_X$$

for each $f \in Sets(X, Y)$. We now claim that

$$\operatorname{Ran}_{\chi_X}(f) \circ \chi_X = f$$

for each $f \in Sets(X, Y)$. Indeed, we have

$$[\operatorname{Ran}_{\chi_X}(f) \circ \chi_X](x) = \bigwedge_{y \in \{x\}} f(y)$$
$$= f(x)$$

for each $x \in X$. This proves our claim. Since we have shown that

$$[\Phi_{X,Y} \circ \Psi_{X,Y}](f) = f$$

for each $f \in \mathsf{Sets}(X,Y)$, it follows that $\Phi_{X,Y} \circ \Psi_{X,Y}$ must be equal to the identity map $\mathsf{id}_{\mathsf{Sets}(X,Y)}$ of $\mathsf{Sets}(X,Y)$.

Naturality for Φ, Part I

We need to show that, given a function $f: X \to X'$, the diagram

$$\begin{split} \mathsf{InfLat}((\mathcal{P}(X'),\supset),(Y,\preceq)) & \xrightarrow{\Phi_{X',Y}} \mathsf{Sets}(X',Y) \\ & \mathcal{P}_{!}(f)^{*} \bigg| & & \bigg| f^{*} \\ & \mathsf{InfLat}((\mathcal{P}(X),\supset),(Y,\preceq)) \xrightarrow{\Phi_{X,Y}} \mathsf{Sets}(X,Y) \end{split}$$

commutes. Indeed, we have

$$\begin{split} [\Phi_{X,Y} \circ \mathcal{P}_!(f)^*](\xi) &\stackrel{\text{def}}{=} \Phi_{X,Y}(\mathcal{P}_!(f)^*(\xi)) \\ &\stackrel{\text{def}}{=} \Phi_{X,Y}(\xi \circ f_!) \\ &\stackrel{\text{def}}{=} (\xi \circ f_!) \circ \chi_X \\ &= \xi \circ (f_! \circ \chi_X) \\ &\stackrel{(\dagger)}{=} \xi \circ (\chi_{X'} \circ f) \\ &= (\xi \circ \chi_{X'}) \circ f \\ &\stackrel{\text{def}}{=} \Phi_{X',Y}(\xi) \circ f \\ &\stackrel{\text{def}}{=} f^*(\Phi_{X',Y}(\xi)) \\ &\stackrel{\text{def}}{=} [f^* \circ \Phi_{X',Y}](\xi), \end{split}$$

for each $\xi \in \text{InfLat}((\mathcal{P}(X'), \supset), (Y, \preceq))$, where we have used Item 1 of Proposition 4.5.4.1.3 for the fifth equality above.

Naturality for Φ , Part II

We need to show that, given a cocontinuous morphism of posets

$$g: (Y, \preceq_Y) \rightarrow (Y', \preceq_{Y'}),$$

the diagram

$$\mathsf{InfLat}((\mathcal{P}(X),\supset),(Y,\preceq)) \xrightarrow{\Phi_{X,Y}} \mathsf{Sets}(X,Y)$$

$$\downarrow^{g_!} \qquad \qquad \downarrow^{g_!}$$

$$\mathsf{InfLat}((\mathcal{P}(X),\supset),(Y',\preceq)) \xrightarrow{\Phi_{X,Y'}} \mathsf{Sets}(X,Y')$$

commutes. Indeed, we have

$$\begin{split} [\Phi_{X,Y'} \circ g_!](\xi) &\stackrel{\text{def}}{=} \Phi_{X,Y'}(g_!(\xi)) \\ &\stackrel{\text{def}}{=} \Phi_{X,Y'}(g \circ \xi) \\ &\stackrel{\text{def}}{=} (g \circ \xi) \circ \chi_X \\ &= g \circ (\xi \circ \chi_X) \\ &\stackrel{\text{def}}{=} g \circ (\Phi_{X,Y}(\xi)) \\ &\stackrel{\text{def}}{=} g_!(\Phi_{X,Y}(\xi)) \\ &\stackrel{\text{def}}{=} [g_! \circ \Phi_{X,Y}](\xi). \end{split}$$

for each $\xi \in \mathsf{InfLat}((\mathcal{P}(X),\supset),(Y,\preceq))$.

Naturality for Ψ

Since Φ is natural in each argument and Φ is a componentwise inverse to Ψ in each argument, it follows from Categories, Item 2 of Proposition 11.9.7.1.2 that Ψ is also natural in each argument.

WARNING 4.4.6.1.5 ► Free Completion Is Not an Idempotent Operation

Although the assignment $X \mapsto \mathcal{P}(X)^{\text{op}}$ is called the *free completion of* X, it is not an idempotent operation, i.e. we have $\mathcal{P}(\mathcal{P}(X)^{\text{op}})^{\text{op}} \neq \mathcal{P}(X)^{\text{op}}$.

01JT 4.4.7 The Internal Hom of a Powerset

Let X be a set and let $U, V \in \mathcal{P}(X)$.

01 JU PROPOSITION 4.4.7.1.1 ► THE INTERNAL HOM OF A POWERSET

The internal Hom of $\mathcal{P}(X)$ from U to V is the subset $[U,V]_{X}{}^{1}$ of X given by

$$[U, V]_X = U^{c} \cup V$$
$$= (U \setminus V)^{c}$$

where U^{c} is the complement of U of Definition 4.3.11.1.

¹Further Notation: Also written $\operatorname{Hom}_{\mathcal{P}(X)}(U,V)$.

PROOF 4.4.7.1.2 ► PROOF OF PROPOSITION 4.4.7.1.1

Proof of the Equality $U^{c} \cup V = (U \setminus V)^{c}$

We have

020S

020T

020U

$$(U \setminus V)^{c} \stackrel{\text{def}}{=} X \setminus (U \setminus V)$$

$$= (X \cap V) \cup (X \setminus U)$$

$$= V \cup (X \setminus U)$$

$$\stackrel{\text{def}}{=} V \cup U^{c}$$

$$= U^{c} \cup V.$$

where we have used:

- 1. Item 10 of Proposition 4.3.10.1.2 for the second equality.
- 2. Item 4 of Proposition 4.3.9.1.2 for the third equality.
- 3. Item 4 of Proposition 4.3.8.1.2 for the last equality.

This finishes the proof.

Proof that $U^{\mathsf{c}} \cup V$ Is Indeed the Internal Hom

This follows from Item 2 of Proposition 4.3.9.1.2.

004C REMARK 4.4.7.1.3 \triangleright Intuition for the Internal Hom of $\mathcal{P}(X)$

Henning Makholm suggests the following heuristic intuition for the internal Hom of $\mathcal{P}(X)$ from U to V ([MSE 267365]):

- o1JV

 1. Since products in $\mathcal{P}(X)$ are given by binary intersections (Item 1 of Proposition 4.4.1.1.4), the right adjoint $\operatorname{Hom}_{\mathcal{P}(X)}(U,-)$ of $U\cap -$ may be thought of as a function type [U,V].
- 01JW 2. Under the Curry–Howard correspondence (??), the function type [U, V] corresponds to implication $U \Rightarrow V$.
- 01JX 3. Implication $U \Rightarrow V$ is logically equivalent to $\neg U \lor V$.
- 01JY 4. The expression $\neg U \lor V$ then corresponds to the set $U^{\mathsf{c}} \cup V$ in $\mathcal{P}(X)$.
- 01JZ 5. The set $U^{c} \vee V$ turns out to indeed be the internal Hom of $\mathcal{P}(X)$.

PROPOSITION 4.4.7.1.4 ► PROPERTIES OF INTERNAL HOMS OF POWERSETS

Let *X* be a set.

01K1

01K2

01K3

01K4

1. Functoriality. The assignments $U, V, (U, V) \mapsto \operatorname{Hom}_{\mathcal{P}(X)}$ define functors

$$[U, -]_X: \qquad (\mathcal{P}(X), \supset) \qquad \to (\mathcal{P}(X), \subset),$$

$$[-, V]_X: \qquad (\mathcal{P}(X), \subset) \qquad \to (\mathcal{P}(X), \subset),$$

$$[-_1, -_2]_X: (\mathcal{P}(X) \times \mathcal{P}(X), \subset \times \supset) \to (\mathcal{P}(X), \subset).$$

In particular, the following statements hold for each $U, V, A, B \in \mathcal{P}(X)$:

- (a) If $U \subset A$, then $[A, V]_X \subset [U, V]_X$.
- (b) If $V \subset B$, then $[U, V]_X \subset [U, B]_X$.
- (c) If $U \subset A$ and $V \subset B$, then $[A, V]_X \subset [U, B]_X$.

01K5

2. Adjointness. We have adjunctions

$$(U \cap - + [U, -]_X): \quad \mathcal{P}(X) \xrightarrow{\bot} \mathcal{P}(X),$$

$$(- \cap V + [V, -]_X): \quad \mathcal{P}(X) \xrightarrow{\bot} \mathcal{P}(X),$$

$$(-\cap V \dashv [V,-]_X): \mathcal{P}(X) \underbrace{\downarrow}_{[V,-]_X} \mathcal{P}(X),$$

witnessed by bijections

$$\operatorname{Hom}_{\mathcal{P}(X)}(U \cap V, W) \cong \operatorname{Hom}_{\mathcal{P}(X)}(U, [V, W]_X),$$

 $\operatorname{Hom}_{\mathcal{P}(X)}(U \cap V, W) \cong \operatorname{Hom}_{\mathcal{P}(X)}(V, [U, W]_X).$

In particular, the following statements hold for each $U, V, W \in$ $\mathcal{P}(X)$:

- (a) The following conditions are equivalent:
 - i. We have $U \cap V \subset W$.
 - ii. We have $U \subset [V, W]_X$.
- (b) The following conditions are equivalent:
 - i. We have $U \cap V \subset W$.
 - ii. We have $V \subset [U, W]_X$.
- 3. Interaction With the Empty Set I. We have

$$[U, \emptyset]_X = U^{\mathsf{c}},$$
$$[\emptyset, V]_X = X,$$

natural in $U, V \in \mathcal{P}(X)$.

4. *Interaction With X*. We have

$$[U, X]_X = X,$$
$$[X, V]_X = V,$$

natural in $U, V \in \mathcal{P}(X)$.

01KA **01KB**

01K6

01K7 01K8

01K9

01KC

01KD

01KE

5. Interaction With the Empty Set II. The functor

$$D_X \colon \mathcal{P}(X)^{\mathsf{op}} \to \mathcal{P}(X)$$

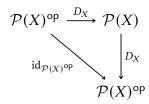

defined by

$$D_X \stackrel{\text{def}}{=} [-, \emptyset]_X$$
$$= (-)^{\mathsf{c}}$$

is an involutory isomorphism of categories, making \emptyset into a dualising object for $(\mathcal{P}(X), \cap, X, [-, -]_X)$ in the sense of **??**. In particular:

01KF

(a) The diagram

commutes, i.e. we have

$$\underbrace{D_X(D_X(U))}_{\stackrel{\text{def}}{=}[[U,\emptyset]_X,\emptyset]_X} = U$$

for each $U \in \mathcal{P}(X)$.

01KG

(b) The diagram

$$\mathcal{P}(X)^{\text{op}} \times \mathcal{P}(X)^{\text{op}} \xrightarrow{\cap^{\text{op}}} \mathcal{P}(X)^{\text{op}}$$

$$\downarrow^{D_X}$$

$$\mathcal{P}(X)^{\text{op}} \times \mathcal{P}(X) \xrightarrow{[-1,-2]_X} \mathcal{P}(X)$$

commutes, i.e. we have

$$\underbrace{D_X(U\cap D_X(V))}_{\stackrel{\mathrm{def}}{=}[U\cap [V,\emptyset]_X,\emptyset]_X}=[U,V]_X$$

for each $U, V \in \mathcal{P}(X)$.

01KH

6. *Interaction With the Empty Set III.* Let $f: X \to Y$ be a function.

01KJ

(a) Interaction With Direct Images. The diagram

$$\begin{array}{ccc}
\mathcal{P}(X)^{\text{op}} & \xrightarrow{f_*^{\text{op}}} \mathcal{P}(Y)^{\text{op}} \\
\downarrow^{D_X} & & \downarrow^{D_Y} \\
\mathcal{P}(X) & \xrightarrow{f_!} \mathcal{P}(Y)
\end{array}$$

commutes, i.e. we have

$$f_!(D_X(U)) = D_Y(f_*(U))$$

for each $U \in \mathcal{P}(X)$.

01KK

(b) Interaction With Inverse Images. The diagram

$$\begin{array}{ccc}
\mathcal{P}(Y)^{\mathsf{op}} & \xrightarrow{f^{-1,\mathsf{op}}} \mathcal{P}(X)^{\mathsf{op}} \\
\downarrow^{D_{Y}} & & \downarrow^{D_{X}} \\
\mathcal{P}(Y) & \xrightarrow{f^{-1}} & \mathcal{P}(X)
\end{array}$$

commutes, i.e. we have

$$f^{-1}(D_Y(U)) = D_X(f^{-1}(U))$$

for each $U \in \mathcal{P}(X)$.

01KL

(c) Interaction With Codirect Images. The diagram

$$\begin{array}{ccc}
\mathcal{P}(X)^{\text{op}} & \xrightarrow{f_!^{\text{op}}} \mathcal{P}(Y)^{\text{op}} \\
\downarrow^{D_X} & & \downarrow^{D_Y} \\
\mathcal{P}(X) & \xrightarrow{f_*} \mathcal{P}(Y)
\end{array}$$

commutes, i.e. we have

$$f_*(D_X(U)) = D_Y(f_!(U))$$

for each $U \in \mathcal{P}(X)$.

7. Interaction With Unions of Families of Subsets I. The diagram

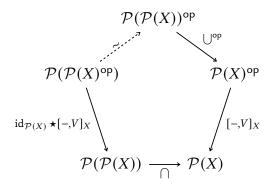

$$\begin{array}{c|c} \mathcal{P}(\mathcal{P}(X))^{\mathrm{op}} \times \mathcal{P}(\mathcal{P}(X)) & \xrightarrow{[-1,-2]_{\mathcal{P}(X)}} \mathcal{P}(\mathcal{P}(X)) \\ & \cup^{\mathrm{op}} \times \cup^{\mathrm{op}} & & \\ & \mathcal{P}(X)^{\mathrm{op}} \times \mathcal{P}(X) & \xrightarrow{[-1,-2]_X} & \mathcal{P}(X), \end{array}$$

does not commute in general, i.e. we may have

$$\bigcup_{W \in [\mathcal{U}, \mathcal{V}]_{\mathcal{P}(X)}} W \neq \left[\bigcup_{U \in \mathcal{U}} U, \bigcup_{V \in \mathcal{V}} V\right]_X$$

in general, where $\mathcal{U} \in \mathcal{P}(\mathcal{P}(X))$.

8. Interaction With Unions of Families of Subsets II. The diagram

commutes, i.e. we have

$$\left[\bigcup_{U\in\mathcal{U}}U,V\right]_X=\bigcap_{U\in\mathcal{U}}[U,V]_X$$

for each $U \in \mathcal{P}(\mathcal{P}(X))$ and each $V \in \mathcal{P}(X)$.

01KN

01KM

01KP

9. Interaction With Unions of Families of Subsets III. The diagram

$$\mathcal{P}(\mathcal{P}(X)) \xrightarrow{\bigcup} \mathcal{P}(X)$$

$$\mathrm{id}_{\mathcal{P}(X)} \star [U,-]_X \downarrow \qquad \qquad \downarrow [U,-]_X$$

$$\mathcal{P}(\mathcal{P}(X)) \xrightarrow{\bigcup} \mathcal{P}(X)$$

commutes, i.e. we have

$$\left[U, \bigcup_{V \in \mathcal{V}} V\right]_X = \bigcup_{V \in \mathcal{V}} [U, V]_X$$

for each $U \in \mathcal{P}(X)$ and each $\mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$.

01KQ

10. Interaction With Intersections of Families of Subsets I. The diagram

$$\begin{array}{c|c} \mathcal{P}(\mathcal{P}(X))^{\mathrm{op}} \times \mathcal{P}(\mathcal{P}(X)) & \xrightarrow{[-_{1},-_{2}]_{\mathcal{P}(X)}} \mathcal{P}(\mathcal{P}(X)) \\ & & \times & & \downarrow \cap \\ \mathcal{P}(X)^{\mathrm{op}} \times \mathcal{P}(X) & \xrightarrow{[-_{1},-_{2}]_{X}} \mathcal{P}(X), \end{array}$$

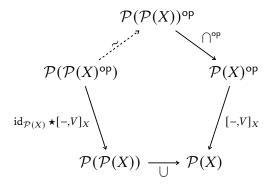

does not commute in general, i.e. we may have

$$\bigcap_{W \in [\mathcal{U}, \mathcal{V}]_{\mathcal{P}(X)}} W \neq \left[\bigcap_{U \in \mathcal{U}} U, \bigcap_{V \in \mathcal{V}} V\right]_X$$

in general, where $\mathcal{U} \in \mathcal{P}(\mathcal{P}(X))$.

01KR

11. Interaction With Intersections of Families of Subsets II. The diagram

commutes, i.e. we have

$$\left[\bigcap_{U\in\mathcal{U}}U,V\right]_X=\bigcup_{U\in\mathcal{U}}[U,V]_X$$

for each $U \in \mathcal{P}(\mathcal{P}(X))$ and each $V \in \mathcal{P}(X)$.

01KS

12. Interaction With Intersections of Families of Subsets III. The diagram

$$\begin{array}{ccc}
\mathcal{P}(\mathcal{P}(X)) & \xrightarrow{\bigcap} \mathcal{P}(X) \\
\downarrow^{[U,-]_X} & & \downarrow^{[U,-]_X} \\
\mathcal{P}(\mathcal{P}(X)) & \xrightarrow{\bigcap} \mathcal{P}(X)
\end{array}$$

commutes, i.e. we have

$$\left[U, \bigcap_{V \in \mathcal{V}} V\right]_X = \bigcap_{V \in \mathcal{V}} [U, V]_X$$

for each $U \in \mathcal{P}(X)$ and each $\mathcal{V} \in \mathcal{P}(\mathcal{P}(X))$.

01KT

13. Interaction With Binary Unions. We have equalities of sets

$$[U \cap V, W]_X = [U, W]_X \cup [V, W]_X,$$

 $[U, V \cap W]_X = [U, V]_X \cap [U, W]_X$

for each $U, V, W \in \mathcal{P}(X)$.

01KU

14. Interaction With Binary Intersections. We have equalities of sets

$$[U \cup V, W]_X = [U, W]_X \cap [V, W]_X,$$

 $[U, V \cup W]_X = [U, V]_X \cup [U, W]_X$

for each $U, V, W \in \mathcal{P}(X)$.

01KV

15. Interaction With Differences. We have equalities of sets

$$[U \setminus V, W]_X = [U, W]_X \cup [V^{c}, W]_X$$
$$= [U, W]_X \cup [U, V]_X,$$
$$[U, V \setminus W]_X = [U, V]_X \setminus (U \cap W)$$

for each $U, V, W \in \mathcal{P}(X)$.

01KW

16. Interaction With Complements. We have equalities of sets

$$[U^{c}, V]_{X} = U \cup V,$$

$$[U, V^{c}]_{X} = U \cap V,$$

$$[U, V]_{X}^{c} = U \setminus V$$

for each $U, V \in \mathcal{P}(X)$.

01KX

17. Interaction With Characteristic Functions. We have

$$\chi_{[U,V]_{\mathcal{P}(X)}}(x) = \max(1 - \chi_U \pmod{2}, \chi_V)$$

for each $U, V \in \mathcal{P}(X)$.

01KY

18. *Interaction With Direct Images*. Let $f: X \to Y$ be a function. The diagram

01KZ

01L0

commutes, i.e. we have an equality of sets

$$f_!([U,V]_X) = [f_*(U), f_!(V)]_Y,$$

natural in $U, V \in \mathcal{P}(X)$.

19. Interaction With Inverse Images. Let $f: X \to Y$ be a function. The diagram

$$\mathcal{P}(Y)^{\text{op}} \times \mathcal{P}(Y) \xrightarrow{f^{-1,\text{op}} \times f^{-1}} \mathcal{P}(X)^{\text{op}} \times \mathcal{P}(X)$$

$$\downarrow [-1,-2]_{Y} \qquad \qquad \downarrow [-1,-2]_{X}$$

$$\mathcal{P}(Y) \xrightarrow{f^{-1}} \mathcal{P}(X)$$

commutes, i.e. we have an equality of sets

$$f^{-1}([U,V]_Y) = [f^{-1}(U), f^{-1}(V)]_X,$$

natural in $U, V \in \mathcal{P}(X)$.

20. *Interaction With Codirect Images*. Let $f: X \to Y$ be a function. We have a natural transformation

with components

$$[f_!(U), f_*(V)]_Y \subset f_*([U, V]_X)$$

indexed by $U, V \in \mathcal{P}(X)$.

PROOF 4.4.7.1.5 ► PROOF OF PROPOSITION 4.4.7.1.4

Item 1: Functoriality

Since $\mathcal{P}(X)$ is posetal, it suffices to prove Items 1a to 1c.

ow 1. Proof of Item 1a: We have

$$[A, V]_X \stackrel{\text{def}}{=} A^{\mathsf{c}} \cup V$$

$$\subset U^{\mathsf{c}} \cup V$$

$$\stackrel{\text{def}}{=} [U, V]_X,$$

where we have used:

- (a) Item 1 of Proposition 4.3.11.1.2, which states that if $U \subset A$, then $A^c \subset U^c$.
- (b) Item 1a of Item 1 of Proposition 4.3.11.1.2, which states that if $A^c \subset U^c$, then $A^c \cup K \subset U^c \cup K$ for any $K \in \mathcal{P}(X)$.
- 2. Proof of Item 1b: We have

$$[U, V]_X \stackrel{\text{def}}{=} U^{\mathsf{c}} \cup V$$
$$\subset U^{\mathsf{c}} \cup B$$
$$\stackrel{\text{def}}{=} [U, B]_X,$$

where we have used Item 1b of Item 1 of Proposition 4.3.11.1.2, which states that if $V \subset B$, then $K \cup V \subset K \cup B$ for any $K \in \mathcal{P}(X)$.

3. Proof of Item 1c: We have

$$[A, V]_X \subset [U, V]_X$$
$$\subset [U, B]_X,$$

where we have used Items 1a and 1b.

This finishes the proof.

Item 2: Adjointness

020W

020X

020Y 020Z

0210

This is a repetition of Item 2 of Proposition 4.3.9.1.2 and is proved there.

Item 3: Interaction With the Empty Set I

We have

$$[U, \emptyset]_X \stackrel{\text{def}}{=} U^{\mathsf{c}} \cup \emptyset$$
$$= U^{\mathsf{c}},$$

where we have used Item 3 of Proposition 4.3.8.1.2, and we have

$$[\emptyset, V]_X \stackrel{\text{def}}{=} \emptyset^{\mathsf{c}} \cup V$$

$$\stackrel{\text{def}}{=} (X \setminus \emptyset) \cup V$$

$$= X \cup V$$

$$= X,$$

where we have used:

- 1. Item 12 of Proposition 4.3.10.1.2 for the first equality.
 - 2. Item 5 of Proposition 4.3.8.1.2 for the last equality.

Since $\mathcal{P}(X)$ is posetal, naturality is automatic (Categories, Item 4 of Proposition 11.2.7.1.2).

Item 4: Interaction With X

We have

$$[U,X]_X \stackrel{\text{def}}{=} U^{\mathsf{c}} \cup X$$
$$= X,$$

where we have used Item 5 of Proposition 4.3.8.1.2, and we have

$$\begin{split} [X,V]_X &\stackrel{\text{def}}{=} X^\mathsf{c} \cup V \\ &\stackrel{\text{def}}{=} (X \setminus X) \cup V \\ &= \emptyset \cup V \\ &= V, \end{split}$$

0211

0212

where we have used Item 3 of Proposition 4.3.8.1.2 for the last equality. Since $\mathcal{P}(X)$ is posetal, naturality is automatic (Categories, Item 4 of Proposition 11.2.7.1.2).

Item 5: Interaction With the Empty Set II

We have

0213

0214

$$D_X(D_X(U)) \stackrel{\text{def}}{=} [[U, \emptyset]_X, \emptyset]_X$$
$$= [U^c, \emptyset]_X$$
$$= (U^c)^c$$
$$= U,$$

where we have used:

- 1. Item 3 for the second and third equalities.
- 2. Item 3 of Proposition 4.3.11.1.2 for the fourth equality.

Since $\mathcal{P}(X)$ is posetal, naturality is automatic (Categories, Item 4 of Proposition 11.2.7.1.2), and thus we have

$$[[-,\emptyset]_X,\emptyset]_X \cong \mathrm{id}_{\mathcal{P}(X)}$$

This finishes the proof.

Item 6: Interaction With the Empty Set III

Since $D_X = (-)^c$, this is essentially a repetition of the corresponding results for $(-)^c$, namely Items 5 to 7 of Proposition 4.3.11.1.2.

Item 7: Interaction With Unions of Families of Subsets I

By Item 3 of Proposition 4.4.7.1.4, we have

$$[\mathcal{U}, \emptyset]_{\mathcal{P}(X)} = \mathcal{U}^{\mathsf{c}},$$

 $[\mathcal{U}, \emptyset]_{X} = \mathcal{U}^{\mathsf{c}}.$

With this, the counterexample given in the proof of Item 10 of Proposition 4.3.6.1.2 then applies.

Item 8: Interaction With Unions of Families of Subsets II

We have

$$\left[\bigcup_{U \in \mathcal{U}} U, V\right]_X \stackrel{\text{def}}{=} \left(\bigcup_{U \in \mathcal{U}} U\right)^{\mathsf{c}} \cup V$$

$$= \left(\bigcap_{U \in \mathcal{U}} U^{\mathsf{c}}\right) \cup V$$

$$= \bigcap_{U \in \mathcal{U}} (U^{\mathsf{c}} \cup V)$$

$$\stackrel{\text{def}}{=} \bigcap_{U \in \mathcal{U}} [U, V]_X,$$

where we have used:

- 1. Item 11 of Proposition 4.3.6.1.2 for the second equality.
- 2. Item 6 of Proposition 4.3.7.1.2 for the third equality.

This finishes the proof.

Item 9: Interaction With Unions of Families of Subsets III

We have

$$\bigcup_{V \in \mathcal{V}} [U, V]_X \stackrel{\text{def}}{=} \bigcup_{V \in \mathcal{V}} (U^c \cup V)$$

$$= U^c \cup \left(\bigcup_{V \in \mathcal{V}} V\right)$$

$$\stackrel{\text{def}}{=} \left[U, \bigcup_{V \in \mathcal{V}} V\right]_Y$$

where we have used Item 6. This finishes the proof.

Item 10: Interaction With Intersections of Families of Subsets I

0215

0216

Let $X = \{0, 1\}$, let $\mathcal{U} = \{\{0, 1\}\}$, and let $\mathcal{V} = \{\{0\}, \{0, 1\}\}$. We have

$$\bigcap_{W \in [\mathcal{U}, \mathcal{V}]_{\mathcal{P}(X)}} W = \bigcap_{W \in \mathcal{P}(X)} W$$
$$= \{0, 1\},$$

whereas

$$\left[\bigcap_{U\in\mathcal{U}}U,\bigcap_{V\in\mathcal{V}}V\right]_X = \left[\{0,1\},\{0\}\right]$$
$$= \{0\},$$

Thus we have

$$\bigcap_{W\in [\mathcal{U},\mathcal{V}]_{\mathcal{P}(X)}}W=\left\{0,1\right\}\neq\left\{0\right\}=\left[\bigcap_{U\in\mathcal{U}}U,\bigcap_{V\in\mathcal{V}}V\right]_X.$$

This finishes the proof.

Item 11: Interaction With Intersections of Families of Subsets II

We have

$$\left[\bigcap_{U\in\mathcal{U}}U,V\right]_{X}^{\operatorname{def}}\left(\bigcap_{U\in\mathcal{U}}U\right)^{\operatorname{c}}\cup V$$

$$=\left(\bigcup_{U\in\mathcal{U}}U^{\operatorname{c}}\right)\cup V$$

$$=\bigcup_{U\in\mathcal{U}}(U^{\operatorname{c}}\cup V)$$

$$\stackrel{\operatorname{def}}{=}\bigcup_{U\in\mathcal{U}}[U,V]_{X},$$

where we have used:

0217

1. Item 12 of Proposition 4.3.6.1.2 for the second equality.

0218

2. Item 6 of Proposition 4.3.7.1.2 for the third equality.

This finishes the proof.

Item 12: Interaction With Intersections of Families of Subsets III

We have

$$\bigcap_{V \in \mathcal{V}} [U, V]_X \stackrel{\text{def}}{=} \bigcap_{V \in \mathcal{V}} (U^{\mathsf{c}} \cup V)$$

$$= U^{\mathsf{c}} \cup \left(\bigcap_{V \in \mathcal{V}} V\right)$$

$$\stackrel{\text{def}}{=} \left[U, \bigcap_{V \in \mathcal{V}} V\right]_Y$$

where we have used Item 6. This finishes the proof.

Item 13: Interaction With Binary Unions

We have

$$[U \cap V, W]_X \stackrel{\text{def}}{=} (U \cap V)^c \cup W$$
$$= (U^c \cup V^c) \cup W$$
$$= (U^c \cup V^c) \cup (W \cup W)$$
$$= (U^c \cup W) \cup (V^c \cup W)$$
$$\stackrel{\text{def}}{=} [U, W]_X \cup [V, W]_X,$$

where we have used:

- 0219
- 1. Item 2 of Proposition 4.3.11.1.2 for the second equality.
- 021A
- 2. Item 8 of Proposition 4.3.8.1.2 for the third equality.
- 021B
- 3. Several applications of Items 2 and 4 of Proposition 4.3.8.1.2 and for the fourth equality.

For the second equality in the statement, we have

$$[U, V \cap W]_X \stackrel{\text{def}}{=} U^{c} \cup (V \cap W)$$
$$= (U^{c} \cup V) \cap (U^{c} \cap W)$$
$$\stackrel{\text{def}}{=} [U, V]_X \cap [U, W]_X,$$

where we have used Item 6 of Proposition 4.3.8.1.2 for the second equality.

Item 14: Interaction With Binary Intersections

We have

021C

021D

021E

021F

$$[U \cup V, W]_X \stackrel{\text{def}}{=} (U \cup V)^c \cup W$$
$$= (U^c \cap V^c) \cup W$$
$$= (U^c \cup W) \cap (V^c \cup W)$$
$$\stackrel{\text{def}}{=} [U, W]_X \cap [V, W]_X,$$

where we have used:

- 1. Item 2 of Proposition 4.3.11.1.2 for the second equality.
- 2. Item 6 of Proposition 4.3.8.1.2 for the third equality.

Now, for the second equality in the statement, we have

$$[U, V \cup W]_X \stackrel{\text{def}}{=} U^{c} \cup (V \cup W)$$
$$= (U^{c} \cup U^{c}) \cup (V \cup W)$$
$$= (U^{c} \cup V) \cup (U^{c} \cup W)$$
$$\stackrel{\text{def}}{=} [U, V]_X \cup [U, W]_X,$$

where we have used:

- 1. Item 8 of Proposition 4.3.8.1.2 for the second equality.
- 2. Several applications of Items 2 and 4 of Proposition 4.3.8.1.2 and for the third equality.

This finishes the proof.

Item 15: Interaction With Differences

We have

$$[U \setminus V, W]_X \stackrel{\text{def}}{=} (U \setminus V)^c \cup W$$

$$\stackrel{\text{def}}{=} (X \setminus (U \setminus V)) \cup W$$

$$= ((X \cap V) \cup (X \setminus U)) \cup W$$

$$= (V \cup (X \setminus U)) \cup W$$

$$\stackrel{\text{def}}{=} (V \cup U^c) \cup W$$

$$= (V \cup (U^c \cup U^c)) \cup W$$

$$= (U^c \cup W) \cup (U^c \cup V)$$

$$\stackrel{\text{def}}{=} [U, W]_X \cup [U, V]_X,$$

where we have used:

- 1. Item 10 of Proposition 4.3.10.1.2 for the third equality.
- 2. Item 4 of Proposition 4.3.9.1.2 for the fourth equality.
- 3. Item 8 of Proposition 4.3.8.1.2 for the sixth equality.
- 4. Several applications of Items 2 and 4 of Proposition 4.3.8.1.2 and for the seventh equality.

We also have

$$[U \setminus V, W]_X \stackrel{\text{def}}{=} (U \setminus V)^c \cup W$$

$$\stackrel{\text{def}}{=} (X \setminus (U \setminus V)) \cup W$$

$$= ((X \cap V) \cup (X \setminus U)) \cup W$$

$$= (V \cup (X \setminus U)) \cup W$$

$$\stackrel{\text{def}}{=} (V \cup U^c) \cup W$$

$$= (V \cup U^c) \cup (W \cup W)$$

$$= (U^c \cup W) \cup (V \cup W)$$

021G

021H

021J

021K

$$= (U^{c} \cup W) \cup ((V^{c})^{c} \cup W)$$

$$\stackrel{\text{def}}{=} [U, W]_{X} \cup [V^{c}, W]_{X},$$

where we have used:

021L

021N

021P

021S

021T

- 1. Item 10 of Proposition 4.3.10.1.2 for the third equality.
- 021M 2. Item 4 of Proposition 4.3.9.1.2 for the fourth equality.
 - 3. Item 8 of Proposition 4.3.8.1.2 for the sixth equality.
 - 4. Several applications of Items 2 and 4 of Proposition 4.3.8.1.2 and for the seventh equality.
- 5. Item 3 of Proposition 4.3.11.1.2 for the eighth equality.

Now, for the second equality in the statement, we have

$$\begin{split} [U,V\setminus W]_X &\stackrel{\mathrm{def}}{=} U^{\mathsf{c}} \cup (V\setminus W) \\ &= (V\setminus W) \cup U^{\mathsf{c}} \\ &= (V\cup U^{\mathsf{c}})\setminus (W\setminus U^{\mathsf{c}}) \\ &\stackrel{\mathrm{def}}{=} (V\cup U^{\mathsf{c}})\setminus (W\setminus (X\setminus U)) \\ &= (V\cup U^{\mathsf{c}})\setminus ((W\cap U)\cup (W\setminus X)) \\ &= (V\cup U^{\mathsf{c}})\setminus ((W\cap U)\cup \emptyset) \\ &= (V\cup U^{\mathsf{c}})\setminus (W\cap U) \\ &= (V\cup U^{\mathsf{c}})\setminus (U\cap W) \\ &\stackrel{\mathrm{def}}{=} [U,V]_X\setminus (U\cap W) \end{split}$$

where we have used:

- 021R 1. Item 4 of Proposition 4.3.8.1.2 for the second equality.
 - 2. Item 4 of Proposition 4.3.10.1.2 for the third equality.
 - 3. Item 10 of Proposition 4.3.10.1.2 for the fifth equality.

021U

- 4. Item 13 of Proposition 4.3.10.1.2 for the sixth equality.
- 021V
- 5. Item 3 of Proposition 4.3.8.1.2 for the seventh equality.
- 021W
- 6. Item 5 of Proposition 4.3.9.1.2 for the eighth equality.

This finishes the proof.

Item 16: Interaction With Complements

We have

$$[U^{c}, V]_{X} \stackrel{\text{def}}{=} (U^{c})^{c} \cup V,$$
$$= U \cup V,$$

where we have used Item 3 of Proposition 4.3.11.1.2. We also have

$$[U, V^{\mathsf{c}}]_X \stackrel{\text{def}}{=} U^{\mathsf{c}} \cup V^{\mathsf{c}}$$
$$= U \cap V$$

where we have used Item 2 of Proposition 4.3.11.1.2. Finally, we have

$$[U, V]_X^{c} = ((U \setminus V)^{c})^{c}$$
$$= U \setminus V.$$

where we have used Item 2 of Proposition 4.3.11.1.2.

Item 17: Interaction With Characteristic Functions

We have

$$\chi_{[U,V]_{\mathcal{P}(X)}}(x) \stackrel{\text{def}}{=} \chi_{U^{\mathsf{c}} \cup V}(x)$$

$$= \max(\chi_{U^{\mathsf{c}}}, \chi_{V})$$

$$= \max(1 - \chi_{U} \pmod{2}, \chi_{V}),$$

where we have used:

1. Item 10 of Proposition 4.3.8.1.2 for the second equality.

021X

021Y

2. Item 4 of Proposition 4.3.11.1.2 for the third equality.

This finishes the proof.

Item 18: Interaction With Direct Images

This is a repetition of Item 10 of Proposition 4.6.1.1.5 and is proved there.

Item 19: Interaction With Inverse Images

This is a repetition of Item 10 of Proposition 4.6.2.1.3 and is proved there.

Item 20: Interaction With Codirect Images

This is a repetition of Item 9 of Proposition 4.6.3.1.7 and is proved there.

01L1 4.4.8 Isbell Duality for Sets

Let *X* be a set.

01L2 DEFINITION 4.4.8.1.1 ➤ THE ISBELL FUNCTION

The **Isbell function** of X is the map

$$I: \mathcal{P}(X) \to \mathsf{Sets}(X, \mathcal{P}(X))$$

defined by

$$I(U) \stackrel{\text{def}}{=} \llbracket x \mapsto \llbracket U, \{x\} \rrbracket_X \rrbracket$$

for each $U \in \mathcal{P}(X)$.

01L3 REMARK 4.4.8.1.2 ► MOTIVATION FOR THE ISBELL FUNCTION

Recall from Remark 4.4.1.1.2 that we may view the powerset $\mathcal{P}(X)$ of a set X as the decategorification of the category of presheaves $\mathsf{PSh}(C)$ of a category C. Building upon this analogy, we want to mimic the definition of the Isbell Spec functor, which is given on objects by

$$\mathsf{Spec}(\mathcal{F}) \stackrel{\mathsf{def}}{=} \mathsf{Nat}(\mathcal{F}, h_{(-)})$$

for each $\mathcal{F} \in \mathsf{Obj}(\mathsf{PSh}(C))$. To this end, we could define

$$\mathsf{I}(U) \stackrel{\mathrm{def}}{=} [U, \chi_{(-)}]_X,$$

replacing:

- The Yoneda embedding $X \mapsto h_X$ of C into $\mathsf{PSh}(C)$ with the characteristic embedding $x \mapsto \chi_x$ of X into $\mathcal{P}(X)$ of Definition 4.5.4.1.1.
- The internal Hom Nat of PSh(C) with the internal Hom $[-,-]_X$ of $\mathcal{P}(X)$ of Proposition 4.4.7.1.1.

However, since $[U, \chi_x]_X$ is a subset of U instead of a truth value, we get a function

$$\mathsf{I} \colon \mathcal{P}(X) \to \mathsf{Sets}(X, \mathcal{P}(X))$$

instead of a function

$$I: \mathcal{P}(X) \to \mathcal{P}(X).$$

This makes some of the properties involving I a bit more cumbersome to state, although we still have an analogue of Isbell duality in that $I_! \circ I$ evaluates to $id_{\mathcal{P}(X)}$ in the sense of Proposition 4.4.8.1.3.

01L4 PROPOSITION 4.4.8.1.3 ► ISBELL DUALITY FOR SETS

The diagram

$$\begin{array}{ccc} \mathcal{P}(X) & \stackrel{\mathsf{I}}{\longrightarrow} \mathsf{Sets}(X,\mathcal{P}(X)) \\ & & & & & & & & \\ & & & & & & & \\ & & & & & & & \\ & & & & & & & \\ & & & & & & & \\ & & & & & & & \\ & & & & & & & \\ & & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & \\ & & & \\ & & \\ & & & \\ & \\ &$$

commutes, i.e. we have

$$\mathsf{I}_!(\mathsf{I}(U)) = \llbracket x \mapsto \llbracket y \mapsto U \rrbracket \rrbracket \rrbracket$$

for each $U \in \mathcal{P}(X)$.

PROOF 4.4.8.1.4 ► PROOF OF PROPOSITION 4.4.8.1.3

We have

$$I_{!}(I(U)) \stackrel{\text{def}}{=} I_{!}([\![x \mapsto U^{c} \cup \{x\}]\!])$$

$$\stackrel{\text{def}}{=} [\![x \mapsto I(U^{c} \cup \{x\})]\!]$$

$$\stackrel{\text{def}}{=} [\![x \mapsto [\![y \mapsto (U^{c} \cup \{x\})^{c} \cup \{x\}]\!]]\!]$$

$$= [\![x \mapsto [\![y \mapsto (U \cap (X \setminus \{x\})) \cup \{x\}]\!]]\!]$$

$$= [\![x \mapsto [\![y \mapsto (U \setminus \{x\}) \cup \{x\}]\!]]\!]$$

$$= [\![x \mapsto [\![y \mapsto U]\!]]\!],$$

where we have used Item 2 of Proposition 4.3.11.1.2 for the fourth equality above.

01L5 4.5 Characteristic Functions

005X 4.5.1 The Characteristic Function of a Subset

Let X be a set and let $U \in \mathcal{P}(X)$.

005Z DEFINITION 4.5.1.1.1 ► THE CHARACTERISTIC FUNCTION OF A SUBSET

The **characteristic function of** U^1 is the function $\chi_U: X \to \{t, f\}^2$ defined by

$$\chi_U(x) \stackrel{\text{def}}{=} \begin{cases} \text{true} & \text{if } x \in U, \\ \text{false} & \text{if } x \notin U \end{cases}$$

for each $x \in X$.

REMARK 4.5.1.1.2 ► CHARACTERISTIC FUNCTIONS OF SUBSETS AS DECATEGORIFICATIONS OF PRESHEAVES

01L6

¹Further Terminology: Also called the **indicator function of** U.

² Further Notation: Also written $\chi_X(U, -)$ or $\chi_X(-, U)$.

Under the analogy that $\{t, f\}$ should be the (-1)-categorical analogue of Sets, we may view a function

$$f: X \to \{\mathsf{t}, \mathsf{f}\}$$

as a decategorification of presheaves and copresheaves

$$\mathcal{F} \colon C^{\mathsf{op}} \to \mathsf{Sets},$$

 $F \colon C \to \mathsf{Sets}.$

The characteristic functions χ_U of the subsets of X are then the primordial examples of such functions (and, in fact, all of them).

01L7 NOTATION 4.5.1.1.3 ► FURTHER NOTATION FOR CHARACTERISTIC FUNCTIONS

We will often employ the bijection $\{t, f\} \cong \{0, 1\}$ to make use of the arithmetical operations defined on $\{0, 1\}$ when disucssing characteristic functions.

Examples of this include Items 4 to 11 of Proposition 4.5.1.1.4 below.

PROPOSITION 4.5.1.1.4 ➤ PROPERTIES OF CHARACTERISTIC FUNCTIONS OF SUBSETS

Let *X* be a set.

01L8

01L9

01LA

1. Functionality. The assignment $U \mapsto \chi_U$ defines a function

$$\chi_{(-)} \colon \mathcal{P}(X) \to \mathsf{Sets}(X, \{\mathsf{t}, \mathsf{f}\}).$$

- 2. *Bijectivity*. The function $\chi_{(-)}$ from Item 1 is bijective.
- 3. Naturality. The collection

$$\left\{\chi_{(-)} \colon \mathcal{P}(X) \to \mathsf{Sets}(X, \{\mathsf{t}, \mathsf{f}\})\right\}_{X \in \mathsf{Obi}(\mathsf{Sets})}$$

defines a natural isomorphism between \mathcal{P}^{-1} and Sets $(-, \{t, f\})$. In particular, given a function $f: X \to Y$, the diagram

$$\mathcal{P}(Y) \xrightarrow{f^{-1}} \mathcal{P}(X)$$

$$\chi_{(-)} \downarrow \chi \qquad \qquad \downarrow \chi_{(-)} \downarrow \chi_{(-)}$$

$$\mathsf{Sets}(Y, \{\mathsf{t}, \mathsf{f}\}) \xrightarrow{f^*} \mathsf{Sets}(X, \{\mathsf{t}, \mathsf{f}\})$$

commutes, i.e. we have

$$\chi_V \circ f = \chi_{f^{-1}(V)}$$

for each $V \in \mathcal{P}(Y)$.

006B

006C

006E

4. Interaction With Unions I. We have

$$\chi_{U \cup V} = \max(\chi_U, \chi_V)$$

for each $U, V \in \mathcal{P}(X)$.

5. Interaction With Unions II. We have

$$\chi_{U \cup V} = \chi_U + \chi_V - \chi_{U \cap V}$$

for each $U, V \in \mathcal{P}(X)$.

6. *Interaction With Intersections I.* We have

$$\chi_{U\cap V} = \chi_U \chi_V$$

for each $U, V \in \mathcal{P}(X)$.

7. Interaction With Intersections II. We have

$$\chi_{U \cap V} = \min(\chi_U, \chi_V)$$

for each $U, V \in \mathcal{P}(X)$.

006F

006G

006H

8. Interaction With Differences. We have

$$\chi_{U\setminus V} = \chi_U - \chi_{U\cap V}$$

for each $U, V \in \mathcal{P}(X)$.

9. Interaction With Complements. We have

$$\chi_{U^{c}} = 1 - \chi_{U}$$

for each $U \in \mathcal{P}(X)$.

10. Interaction With Symmetric Differences. We have

$$\chi_{U \triangle V} = \chi_U + \chi_V - 2\chi_{U \cap V}$$

and thus, in particular, we have

$$\chi_{U \triangle V} \equiv \chi_U + \chi_V \pmod{2}$$

for each $U, V \in \mathcal{P}(X)$.

01LB

11. Interaction With Internal Homs. We have

$$\chi_{[U,V]_{\mathcal{P}(X)}} = \max(1 - \chi_U \pmod{2}, \chi_V)$$

for each $U, V \in \mathcal{P}(X)$.

PROOF 4.5.1.1.5 ► PROOF OF PROPOSITION 4.5.1.1.4

Item 1: Functionality

There is nothing to prove.

Item 2: Bijectivity

We proceed in three steps:

021Z

1. The Inverse of $\chi_{(-)}$. The inverse of $\chi_{(-)}$ is the map

$$\Phi \colon \mathsf{Sets}(X, \{\mathsf{t}, \mathsf{f}\}) \xrightarrow{\sim} \mathcal{P}(X),$$

defined by

$$\begin{split} \Phi(f) &\stackrel{\text{def}}{=} U_f \\ &\stackrel{\text{def}}{=} f^{-1}(\mathsf{true}) \\ &\stackrel{\text{def}}{=} \{x \in X \mid f(x) = \mathsf{true}\} \end{split}$$

for each $f \in Sets(X, \{t, f\})$.

0220

2. Invertibility I. We have

$$\begin{split} [\Phi \circ \chi_{(-)}](U) &\stackrel{\text{def}}{=} \Phi(\chi_U) \\ &\stackrel{\text{def}}{=} \chi_U^{-1}(\mathsf{true}) \\ &\stackrel{\text{def}}{=} \{x \in X \mid \chi_U(x) = \mathsf{true}\} \\ &\stackrel{\text{def}}{=} \{x \in X \mid x \in U\} \\ &= U \\ &\stackrel{\text{def}}{=} [\mathsf{id}_{\mathcal{P}(X)}](U) \end{split}$$

for each $U \in \mathcal{P}(X)$. Thus, we have

$$\Phi \circ \chi_{(-)} = \mathrm{id}_{\mathcal{P}(X)} .$$

0221

3. Invertibility II. We have

$$\begin{split} [\chi_{(-)} \circ \Phi](U) &\stackrel{\text{def}}{=} \chi_{\Phi(f)} \\ &\stackrel{\text{def}}{=} \chi_{f^{-1}(\mathsf{true})} \\ &\stackrel{\text{def}}{=} [\![x \mapsto \begin{cases} \mathsf{true} & \text{if } x \in f^{-1}(\mathsf{true}) \\ \mathsf{false} & \text{otherwise} \end{cases}]\!] \\ &= [\![x \mapsto f(x)]\!] \end{split}$$

$$= f \\ \stackrel{\text{def}}{=} [\mathrm{id}_{\mathsf{Sets}(X, \{\mathsf{t}, \mathsf{f}\})}](f)$$

for each $f \in Sets(X, \{t, f\})$. Thus, we have

$$\chi_{(-)} \circ \Phi = \mathrm{id}_{\mathsf{Sets}(X,\{\mathsf{t},\mathsf{f}\})}$$
.

This finishes the proof.

Item 3: Naturality

We proceed in two steps:

1. *Naturality of* $\chi_{(-)}$. We have

$$\begin{split} [\chi_V \circ f](v) &\stackrel{\text{def}}{=} \chi_V(f(v)) \\ &= \begin{cases} \text{true} & \text{if } f(v) \in V, \\ \text{false} & \text{otherwise} \end{cases} \\ &= \begin{cases} \text{true} & \text{if } v \in f^{-1}(V), \\ \text{false} & \text{otherwise} \end{cases} \\ &\stackrel{\text{def}}{=} \chi_{f^{-1}(V)}(v) \end{split}$$

for each $v \in V$.

2. Naturality of Φ . Since $\chi_{(-)}$ is natural and a componentwise inverse to Φ , it follows from Categories, Item 2 of Proposition 11.9.7.1.2 that Φ is also natural in each argument.

This finishes the proof.

Item 4: Interaction With Unions I

This is a repetition of Item 10 of Proposition 4.3.8.1.2 and is proved there.

Item 5: Interaction With Unions II

This is a repetition of Item 11 of Proposition 4.3.8.1.2 and is proved there.

Item 6: Interaction With Intersections I

0222

0223

This is a repetition of Item 10 of Proposition 4.3.9.1.2 and is proved there.

Item 7: Interaction With Intersections II

This is a repetition of Item 11 of Proposition 4.3.9.1.2 and is proved there.

Item 8: Interaction With Differences

This is a repetition of Item 16 of Proposition 4.3.10.1.2 and is proved there.

Item 9: Interaction With Complements

This is a repetition of Item 4 of Proposition 4.3.11.1.2 and is proved there.

Item 10: Interaction With Symmetric Differences

This is a repetition of Item 15 of Proposition 4.3.12.1.2 and is proved there.

Item 11: Interaction With Internal Homs

This is a repetition of Item 17 of Proposition 4.4.7.1.4 and is proved there.

0224 REMARK 4.5.1.1.6 ➤ Powersets as Sets of Functions and Un/Straightening

The bijection

$$\mathcal{P}(X) \cong \operatorname{Sets}(X, \{\mathsf{t}, \mathsf{f}\})$$

of Item 2 of Proposition 4.5.1.1.4, which

- Takes a subset $U \hookrightarrow X$ of X and *straightens* it to a function $\chi_U \colon X \to \{\text{true}, \text{false}\};$
- Takes a function $f: X \to \{\text{true}, \text{false}\}\$ and *unstraightens* it to a subset $f^{-1}(\text{true}) \hookrightarrow X$ of X;

may be viewed as the (-1)-categorical version of the o-categorical un/s-traightening isomorphism between indexed and fibred sets

$$\underbrace{\mathsf{FibSets}_X}_{\overset{\text{def}}{=}\mathsf{Sets}_{/X}} \cong \underbrace{\mathsf{ISets}_X}_{\overset{\text{def}}{=}\mathsf{Fun}(X_{\mathsf{disc}},\mathsf{Sets})}$$

of Un/Straightening for Indexed and Fibred Sets, ??. Here we view:

- Subsets $U \hookrightarrow X$ as being analogous to X-fibred sets $\phi_X \colon A \to X$.
- Functions $f: X \to \{t, f\}$ as being analogous to X-indexed sets $A: X_{disc} \to Sets$.

01LC 4.5.2 The Characteristic Function of a Point

Let X be a set and let $x \in X$.

0060 DEFINITION 4.5.2.1.1 ► THE CHARACTERISTIC FUNCTION OF A POINT

The **characteristic function of** x is the function¹

$$\chi_x \colon X \to \{\mathsf{t},\mathsf{f}\}$$

defined by

$$\chi_x \stackrel{\text{def}}{=} \chi_{\{x\}},$$

i.e. by

01LD

$$\chi_x(y) \stackrel{\text{def}}{=} \begin{cases} \text{true} & \text{if } x = y, \\ \text{false} & \text{if } x \neq y \end{cases}$$

for each $y \in X$.

REMARK 4.5.2.1.2 ► CHARACTERISTIC FUNCTIONS OF POINTS AS DECATEGORIFICATIONS OF REPRESENTABLE PRESHEAVES

Expanding upon Remark 4.5.1.1.2, we may think of the characteristic function

$$\gamma_x \colon X \to \{\mathsf{t},\mathsf{f}\}$$

of an element x of X as a decategorification of the representable presheaf and of the representable copresheaf

$$h_X \colon C^{\mathsf{op}} \to \mathsf{Sets},$$

 $h^X \colon C \to \mathsf{Sets}$

associated of an *object* X of a category C.

O1LE 4.5.3 The Characteristic Relation of a Set

Let *X* be a set.

¹ Further Notation: Also written χ^x , $\chi_X(x, -)$, or $\chi_X(-, x)$.

0061 DEFINITION 4.5.3.1.1 ► THE CHARACTERISTIC RELATION OF A SET

The **characteristic relation on** X^1 is the relation²

$$\chi_X(-1,-2): X \times X \to \{\mathsf{t},\mathsf{f}\}$$

on X defined by³

$$\chi_X(x,y) \stackrel{\text{def}}{=} \begin{cases} \text{true} & \text{if } x = y, \\ \text{false} & \text{if } x \neq y \end{cases}$$

for each $x, y \in X$.

01LF

REMARK 4.5.3.1.2 ► THE CHARACTERISTIC RELATION OF A SET AS A DECATEGORIFICATION OF THE HOM PROFUNCTOR

Expanding upon Remarks 4.5.1.1.2 and 4.5.2.1.2, we may view the characteristic relation

$$\gamma_X(-1,-2): X \times X \to \{\mathsf{t},\mathsf{f}\}$$

of X as a decategorification of the Hom profunctor

$$\operatorname{Hom}_{C}(-1, -2) : C^{\operatorname{op}} \times C \to \operatorname{Sets}$$

of a category C.

O1LG PROPOSITION 4.5.3.1.3 ▶ Properties of Characteristic Relations

Let $f: X \to Y$ be a function.

¹ Further Terminology: Also called the **identity relation on** X.

² Further Notation: Also written χ_{-2}^{-1} , or \sim_{id} in the context of relations.

³Under the bijection Sets $(X \times X, \{t, f\}) \cong \mathcal{P}(X \times X)$ of Item 2 of Proposition 4.5.1.1.4, the relation χ_X corresponds to the diagonal $\Delta_X \subset X \times X$ of X.

006A

1. The Inclusion of Characteristic Relations Associated to a Function. Let $f: A \to B$ be a function. We have an inclusion 1

$$\chi_B \circ (f \times f) \subset \chi_A, \qquad A \times A \xrightarrow{f \times f} B \times B$$

$$\chi_A \searrow \chi_A \qquad \chi_B$$

$$\{t, f\}.$$

¹Note: This is the 0-categorical version of Categories, Definition 11.5.4.1.1.

PROOF 4.5.3.1.4 ► PROOF OF PROPOSITION 4.5.3.1.3

Item 1: The Inclusion of Characteristic Relations Associated to a Functi

The inclusion $\chi_B(f(a), f(b)) \subset \chi_A(a, b)$ is equivalent to the statement "if a = b, then f(a) = f(b)", which is true.

01LH 4.5.4 The Characteristic Embedding of a Set

Let X be a set.

0062 DEFINITION 4.5.4.1.1 ► THE CHARACTERISTIC EMBEDDING OF A SET

The **characteristic embedding**¹ of *X* into $\mathcal{P}(X)$ is the function

$$\chi_{(-)}: X \hookrightarrow \mathcal{P}(X)$$

defined by²

$$\chi_{(-)}(x) \stackrel{\text{def}}{=} \chi_x$$
$$= \{x\}$$

for each $x \in X$.

¹The name "characteristic *embedding*" is justified by Corollary 4.5.5.1.3, which gives an analogue of fully faithfulness for $\chi_{(-)}$.

²Here we are identifying $\mathcal{P}(X)$ with $\mathsf{Sets}(X,\{\mathsf{t},\mathsf{f}\})$ as per Item 2 of Proposition 4.5.1.1.4.

01LJ

REMARK 4.5.4.1.2 ► THE CHARACTERISTIC EMBEDDING OF A SET AS A DECATEGORIFICA-TION OF THE YONEDA EMBEDDING

Expanding upon Remarks 4.5.1.1.2, 4.5.2.1.2 and 4.5.3.1.2, we may view the characteristic embedding

$$\chi_{(-)} \colon X \hookrightarrow \mathcal{P}(X)$$

of X into $\mathcal{P}(X)$ as a decategorification of the Yoneda embedding

of a category C into PSh(C).

01LK

PROPOSITION 4.5.4.1.3 ► PROPERTIES OF CHARACTERISTIC EMBEDDINGS

Let $f: X \to Y$ be a map of sets.

01LL

1. Interaction With Functions. We have

$$f_! \circ \chi_X = \chi_Y \circ f, \qquad \chi_X \bigg| \qquad \int_{\chi_Y} \chi_Y \bigg| \chi_Y$$

$$\mathcal{P}(X) \xrightarrow{f} \mathcal{P}(Y).$$

PROOF 4.5.4.1.4 ▶ PROOF OF PROPOSITION 4.5.4.1.3

Item 1: Interaction With Functions

Indeed, we have

$$[f! \circ \chi_X](x) \stackrel{\text{def}}{=} f!(\chi_X(x))$$

$$\stackrel{\text{def}}{=} f!(\{x\})$$

$$= \{f(x)\}$$

$$\stackrel{\text{def}}{=} \chi_{X'}(f(x))$$

$$\stackrel{\text{def}}{=} [\chi_{X'} \circ f](x),$$

for each $x \in X$, showing the desired equality.

006K 4.5.5 The Yoneda Lemma for Sets

Let X be a set and let $U \subset X$ be a subset of X.

006L PROPOSITION 4.5.5.1.1 ► THE YONEDA LEMMA FOR SETS

We have

$$\chi_{\mathcal{P}(X)}(\chi_x, \chi_U) = \chi_U(x)$$

for each $x \in X$, giving an equality of functions

$$\chi_{\mathcal{P}(X)}(\chi_{(-)},\chi_U)=\chi_U,$$

where

$$\chi_{\mathcal{P}(X)}(U,V) \stackrel{\text{def}}{=} \begin{cases} \text{true} & \text{if } U \subset V, \\ \text{false} & \text{otherwise.} \end{cases}$$

PROOF 4.5.5.1.2 ► PROOF OF PROPOSITION 4.5.5.1.1

We have

$$\chi_{\mathcal{P}(X)}(\chi_x, \chi_U) \stackrel{\text{def}}{=} \begin{cases} \text{true} & \text{if } \{x\} \subset U, \\ \text{false} & \text{otherwise} \end{cases}$$

$$= \begin{cases} \text{true} & \text{if } x \in U \\ \text{false} & \text{otherwise} \end{cases}$$

$$\stackrel{\text{def}}{=} \chi_U(x).$$

This finishes the proof.

006M

COROLLARY 4.5.5.1.3 ► THE CHARACTERISTIC EMBEDDING IS FULLY FAITHFUL

The characteristic embedding is fully faithful, i.e., we have

$$\chi_{\mathcal{P}(X)}(\chi_x,\chi_y)\cong\chi_X(x,y)$$

for each $x, y \in X$.

PROOF 4.5.5.1.4 ► PROOF OF COROLLARY 4.5.5.1.3

We have

$$\chi_{\mathcal{P}(X)}(\chi_x, \chi_y) = \chi_y(x)$$

$$\stackrel{\text{def}}{=} \begin{cases} \text{true} & \text{if } x \in \{y\} \\ \text{false} & \text{otherwise} \end{cases}$$

$$= \begin{cases} \text{true} & \text{if } x = y \\ \text{false} & \text{otherwise} \end{cases}$$

$$\stackrel{\text{def}}{=} \chi_X(x, y).$$

where we have used Proposition 4.5.5.1.1 for the first equality.

O1LM 4.6 The Adjoint Triple $f_! \dashv f^{-1} \dashv f_*$

007F 4.6.1 Direct Images

Let $f: X \to Y$ be a function.

007G

DEFINITION 4.6.1.1.1 ► DIRECT IMAGES

The direct image function associated to f is the function f

$$f_! \colon \mathcal{P}(X) \to \mathcal{P}(Y)$$

defined by²

$$f(U) \stackrel{\text{def}}{=} \left\{ y \in Y \middle| \text{ there exists some } x \in U \right\}$$

$$= \{ f(x) \in Y \mid x \in U \}$$

for each $U \in \mathcal{P}(X)$.

007H NOTATION 4.6.1.1.2 ► FURTHER NOTATION FOR DIRECT IMAGES

Sometimes one finds the notation

$$\exists_f \colon \mathcal{P}(X) \to \mathcal{P}(Y)$$

for $f_!$. This notation comes from the fact that the following statements are equivalent, where $y \in Y$ and $U \in \mathcal{P}(X)$:

- We have $y \in \exists_f(U)$.
- There exists some $x \in U$ such that f(x) = y.

We will not make use of this notation elsewhere in Clowder.

¹Further Notation: Also written simply $f: \mathcal{P}(X) \to \mathcal{P}(Y)$.

²Further Terminology: The set f(U) is called the **direct image of** U **by** f.

WARNING 4.6.1.1.3 ► NOTATION FOR DIRECT IMAGES IS CONFUSING

Notation for direct images between powersets is tricky:

- 1. Direct images for powersets and presheaves are both adjoint to their corresponding inverse image functors. However, the direct image functor for powersets is a left adjoint, while the direct image functor for presheaves is a right adjoint:
 - (a) *Powersets.* Given a function $f: X \to Y$, we have an inverse image functor

$$f^{-1} \colon \mathcal{P}(Y) \to \mathcal{P}(X).$$

The left adjoint of this functor is the usual direct image, defined above in Definition 4.6.1.1.1.

(b) Presheaves. Given a morphism of topological spaces $f: X \to X$ Y, we have an inverse image functor

$$f^{-1} \colon \mathsf{PSh}(Y) \to \mathsf{PSh}(X).$$

The right adjoint of this functor is the direct image functor of presheaves, defined in ??.

- 2. The presheaf direct image functor is denoted f_* , but the direct image functor for powersets is denoted $f_!$ (as it's a left adjoint).
- 3. Adding to the confusion, it's somewhat common for $f_! : \mathcal{P}(X) \to \mathbb{R}$ $\mathcal{P}(Y)$ to be denoted f_* .

We chose to write $f_!$ for the direct image to keep the notation aligned with the following similar adjoint situations:

Situation	Adjoint String
Functoriality of Powersets	$(f_! \dashv f^{-1} \dashv f_*) \colon \mathcal{P}(X) \xrightarrow{\rightleftharpoons} \mathcal{P}(Y)$
Functoriality of Presheaf Categories	$(f_! \dashv f^{-1} \dashv f_*) \colon PSh(X) \xrightarrow{\rightleftarrows} PSh(Y)$
Base Change	$(f_! \dashv f^* \dashv f_*) \colon C_{/X} \xrightarrow{\rightleftarrows} C_{/Y}$
Kan Extensions	$(F_! \dashv F^* \dashv F_*) \colon Fun(C, \mathcal{E}) \xrightarrow{\rightleftarrows} Fun(\mathcal{D}, \mathcal{E})$

0226

0227

0228

0229

022A

007J REMARK 4.6.1.1.4 ➤ UNWINDING DEFINITION 4.6.1.1.1

Identifying $\mathcal{P}(X)$ with Sets $(X, \{t, f\})$ via Item 2 of Proposition 4.5.1.1.4, we see that the direct image function associated to f is equivalently the function

$$f_! \colon \mathcal{P}(X) \to \mathcal{P}(Y)$$

defined by

$$f_{!}(\chi_{U}) \stackrel{\text{def}}{=} \operatorname{Lan}_{f}(\chi_{U})$$

$$= \operatorname{colim}((f \times (-1)) \xrightarrow{\operatorname{pr}} A \xrightarrow{\chi_{U}} \{\mathsf{t}, \mathsf{f}\})$$

$$= \operatorname{colim}_{x \in X} (\chi_{U}(x))$$

$$f(x) = -1$$

$$= \bigvee_{x \in X} (\chi_{U}(x)),$$

$$f(x) = -1$$

where we have used ?? for the second equality. In other words, we have

$$[f!(\chi_U)](y) = \bigvee_{\substack{x \in X \\ f(x) = y}} (\chi_U(x))$$

$$= \begin{cases} \text{true} & \text{if there exists some } x \in X \text{ such} \\ & \text{that } f(x) = y \text{ and } x \in U, \\ \text{false} & \text{otherwise} \end{cases}$$

$$= \begin{cases} \text{true} & \text{if there exists some } x \in U \\ & \text{such that } f(x) = y, \\ \text{false} & \text{otherwise} \end{cases}$$

for each $y \in Y$.

007K PROPOSITION 4.6.1.1.5 ► PROPERTIES OF DIRECT IMAGES I

Let $f: X \to Y$ be a function.

007L

1. Functoriality. The assignment $U \mapsto f(U)$ defines a functor

$$f_! \colon (\mathcal{P}(X), \subset) \to (\mathcal{P}(Y), \subset).$$

In particular, for each $U, V \in \mathcal{P}(X)$, the following condition is satisfied:

$$(\star)$$
 If $U \subset V$, then $f_!(U) \subset f_!(V)$.

007M

2. Triple Adjointness. We have a triple adjunction

$$(f_! \dashv f^{-1} \dashv f_*): \mathcal{P}(X) \leftarrow f^{-1} - \mathcal{P}(Y),$$

witnessed by:

01LN

(a) Units and counits of the form

$$id_{\mathcal{P}(X)} \hookrightarrow f^{-1} \circ f_!, \qquad id_{\mathcal{P}(Y)} \hookrightarrow f_* \circ f^{-1},$$

 $f_! \circ f^{-1} \hookrightarrow id_{\mathcal{P}(Y)}, \qquad f^{-1} \circ f_* \hookrightarrow id_{\mathcal{P}(X)},$

having components of the form

$$U \subset f^{-1}(f_!(U)), \qquad V \subset f_*(f^{-1}(V)),$$

 $f_!(f^{-1}(V)) \subset V, \qquad f^{-1}(f_*(U)) \subset U$

indexed by $U \in \mathcal{P}(X)$ and $V \in \mathcal{P}(Y)$.

01LP

(b) Bijections of sets

$$\operatorname{Hom}_{\mathcal{P}(Y)}(f_!(U), V) \cong \operatorname{Hom}_{\mathcal{P}(X)}(U, f^{-1}(V)),$$

$$\operatorname{Hom}_{\mathcal{P}(X)}(f^{-1}(U), V) \cong \operatorname{Hom}_{\mathcal{P}(X)}(U, f_*(V)),$$

natural in $U \in \mathcal{P}(X)$ and $V \in \mathcal{P}(Y)$ and (respectively) $V \in \mathcal{P}(X)$ and $U \in \mathcal{P}(Y)$. In particular:

01LQ

i. The following conditions are equivalent:

01LR

01LS

01LT

01LU

01LV

01LW

A. We have $f_!(U) \subset V$.

B. We have $U \subset f^{-1}(V)$.

ii. The following conditions are equivalent:

A. We have $f^{-1}(U) \subset V$.

B. We have $U \subset f_*(V)$.

3. Interaction With Unions of Families of Subsets. The diagram

$$\mathcal{P}(\mathcal{P}(X)) \xrightarrow{(f_{i})_{!}} \mathcal{P}(\mathcal{P}(Y))$$

$$\bigcup_{\mathcal{P}(X) \xrightarrow{f_{i}}} \mathcal{P}(Y)$$

commutes, i.e. we have

$$\bigcup_{U \in \mathcal{U}} f_!(U) = \bigcup_{V \in f_!(\mathcal{U})} V$$

for each $\mathcal{U} \in \mathcal{P}(X)$, where $f_!(\mathcal{U}) \stackrel{\text{def}}{=} (f_!)_!(\mathcal{U})$.

4. Interaction With Intersections of Families of Subsets. The diagram

$$\begin{array}{ccc} \mathcal{P}(\mathcal{P}(X)) & \xrightarrow{(f_!)_!} & \mathcal{P}(\mathcal{P}(Y)) \\ & & & & & & & & \\ & & & & & & & \\ & & & & & & & \\ & & & & & & & \\ & & & & & & & \\ & & & & & & & \\ & & & & & & & \\ & & & & & & & \\ & & & & & & & \\ & & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & \\ & & & \\ & \\ & & \\ & & \\ & \\ & & \\ & \\ & & \\ &$$

commutes, i.e. we have

$$\bigcap_{U\in\mathcal{U}} f_!(U) = \bigcap_{V\in f_!(\mathcal{U})} V$$

for each $\mathcal{U} \in \mathcal{P}(X)$, where $f_!(\mathcal{U}) \stackrel{\text{def}}{=} (f_!)_!(\mathcal{U})$.

01LX

01LY

5. Interaction With Binary Unions. The diagram

$$\begin{array}{ccc} \mathcal{P}(X) \times \mathcal{P}(X) & \xrightarrow{f_{i} \times f_{i}} & \mathcal{P}(Y) \times \mathcal{P}(Y) \\ & & & \downarrow & & \downarrow \\ \mathcal{P}(X) & \xrightarrow{f_{i}} & \mathcal{P}(Y) \end{array}$$

commutes, i.e. we have

$$f_!(U \cup V) = f_!(U) \cup f_!(V)$$

for each $U, V \in \mathcal{P}(X)$.

01LZ

6. *Interaction With Binary Intersections*. We have a natural transformation

with components

$$f_!(U\cap V)\subset f_!(U)\cap f_!(V)$$

indexed by $U, V \in \mathcal{P}(X)$.

01M0

7. Interaction With Differences. We have a natural transformation

$$\mathcal{P}(X)^{\mathsf{op}} \times \mathcal{P}(X) \xrightarrow{f_!^{\mathsf{op}} \times f_!} \mathcal{P}(Y)^{\mathsf{op}} \times \mathcal{P}(Y)$$

$$\downarrow \qquad \qquad \qquad \downarrow \qquad \qquad \qquad \downarrow \qquad \qquad \qquad \downarrow \qquad \qquad \qquad \downarrow \qquad \qquad \qquad \downarrow \qquad \qquad \qquad \downarrow \qquad \qquad \qquad$$

with components

$$f_!(U) \setminus f_!(V) \subset f_!(U \setminus V)$$

indexed by $U, V \in \mathcal{P}(X)$.

8. Interaction With Complements. The diagram

$$\mathcal{P}(X)^{\mathsf{op}} \xrightarrow{f_*^{\mathsf{op}}} \mathcal{P}(Y)^{\mathsf{op}}$$

$$(-)^{\mathsf{c}} \qquad \qquad \downarrow (-)^{\mathsf{c}}$$

$$\mathcal{P}(X) \xrightarrow{f} \mathcal{P}(Y)$$

commutes, i.e. we have

$$f_!(U^\mathsf{c}) = f_*(U)^\mathsf{c}$$

for each $U \in \mathcal{P}(X)$.

9. *Interaction With Symmetric Differences*. We have a natural transformation

with components

$$f_1(U) \triangle f_1(V) \subset f_1(U \triangle V)$$

indexed by $U, V \in \mathcal{P}(X)$.

10. Interaction With Internal Homs of Powersets. The diagram

$$\mathcal{P}(X)^{\text{op}} \times \mathcal{P}(X) \xrightarrow{f_*^{\text{op}} \times f!} \mathcal{P}(Y)^{\text{op}} \times \mathcal{P}(Y) \\
 \downarrow [-_1, -_2]_X \downarrow \qquad \qquad \downarrow [-_1, -_2]_Y \\
 \mathcal{P}(X) \xrightarrow{f!} \mathcal{P}(Y)$$

01M1

01M2

01M3

commutes, i.e. we have an equality of sets

$$f_!([U,V]_X) = [f_*(U), f_!(V)]_Y,$$

natural in $U, V \in \mathcal{P}(X)$.

11. Preservation of Colimits. We have an equality of sets

$$f!\left(\bigcup_{i\in I}U_i\right)=\bigcup_{i\in I}f!(U_i),$$

natural in $\{U_i\}_{i\in I}\in\mathcal{P}(X)^{\times I}$. In particular, we have equalities

$$f_!(U) \cup f_!(V) = f_!(U \cup V),$$

 $f_!(\emptyset) = \emptyset,$

natural in $U, V \in \mathcal{P}(X)$.

12. Oplax Preservation of Limits. We have an inclusion of sets

$$f_! \left(\bigcap_{i \in I} U_i\right) \subset \bigcap_{i \in I} f_!(U_i),$$

natural in $\{U_i\}_{i\in I}\in\mathcal{P}(X)^{\times I}$. In particular, we have inclusions

$$f_!(U \cap V) \subset f_!(U) \cap f_!(V),$$

 $f_!(X) \subset Y,$

natural in $U, V \in \mathcal{P}(X)$.

13. Symmetric Strict Monoidality With Respect to Unions. The direct image function of Item 1 has a symmetric strict monoidal structure

$$(f_!, f_!^{\otimes}, f_{!!1}^{\otimes}) \colon (\mathcal{P}(X), \cup, \emptyset) \to (\mathcal{P}(Y), \cup, \emptyset),$$

being equipped with equalities

$$f_{!|U,V}^{\otimes} \colon f_{!}(U) \cup f_{!}(V) \xrightarrow{=} f_{!}(U \cup V),$$
$$f_{!|1}^{\otimes} \colon \emptyset \xrightarrow{=} \emptyset,$$

natural in $U, V \in \mathcal{P}(X)$.

007P

0070

007N

007R

14. Symmetric Oplax Monoidality With Respect to Intersections. The direct image function of Item 1 has a symmetric oplax monoidal structure

$$(f_!, f_!^{\otimes}, f_{!|1}^{\otimes}) \colon (\mathcal{P}(X), \cap, X) \to (\mathcal{P}(Y), \cap, Y),$$

being equipped with inclusions

$$f_{!|U,V}^{\otimes} \colon f_{!}(U \cap V) \hookrightarrow f_{!}(U) \cap f_{!}(V),$$
$$f_{!|\mathcal{A}}^{\otimes} \colon f_{!}(X) \hookrightarrow Y,$$

natural in $U, V \in \mathcal{P}(X)$.

007S

15. Interaction With Coproducts. Let $f\colon X\to X'$ and $g\colon Y\to Y'$ be maps of sets. We have

$$(f \coprod g)_!(U \coprod V) = f_!(U) \coprod g_!(V)$$

for each $U \in \mathcal{P}(X)$ and each $V \in \mathcal{P}(Y)$.

007T

16. *Interaction With Products*. Let $f: X \to X'$ and $g: Y \to Y'$ be maps of sets. We have

$$(f\boxtimes_{X\times Y}g)_!(U\boxtimes_{X\times Y}V)=f_!(U)\boxtimes_{X'\times Y'}g_!(V)$$

for each $U \in \mathcal{P}(X)$ and each $V \in \mathcal{P}(Y)$.

007U

17. Relation to Codirect Images. We have

$$f_!(U) = f_*(U^{\mathsf{c}})^{\mathsf{c}}$$

$$\stackrel{\text{def}}{=} Y \setminus f_*(X \setminus U)$$

for each $U \in \mathcal{P}(X)$.

PROOF 4.6.1.1.6 ► PROOF OF PROPOSITION 4.6.1.1.5

Item 1: Functoriality

Omitted.

Item 2: Triple Adjointness

This follows from Remark 4.6.1.1.4, Remark 4.6.2.1.2, Remark 4.6.3.1.4, and Kan Extensions, ?? of ??.

Item 3: Interaction With Unions of Families of Subsets

We have

$$\bigcup_{V \in f_{!}(\mathcal{U})} V = \bigcup_{V \in \{f_{!}(U) \in \mathcal{P}(X) \mid U \in \mathcal{U}\}} V$$
$$= \bigcup_{U \in \mathcal{U}} f_{!}(U).$$

This finishes the proof.

Item 4: Interaction With Intersections of Families of Subsets

We have

$$\bigcap_{V \in f_!(\mathcal{U})} V = \bigcap_{V \in \{f_!(U) \in \mathcal{P}(X) \mid U \in \mathcal{U}\}} V$$
$$= \bigcap_{U \in \mathcal{U}} f_!(U).$$

This finishes the proof.

Item 5: Interaction With Binary Unions

See [Pro25p].

Item 6: Interaction With Binary Intersections

See [Pro25n].

Item 7: Interaction With Differences

See [Pro250].

Item 8: Interaction With Complements

Applying Item 17 to $X \setminus U$, we have

$$f_{!}(U^{c}) = f_{!}(X \setminus U)$$

$$= Y \setminus f_{*}(X \setminus (X \setminus U))$$

$$= Y \setminus f_{*}(U)$$

$$= f_{*}(U)^{c}.$$

This finishes the proof.

Item 9: Interaction With Symmetric Differences

We have

022D

022E

022F

022G

$$f_{!}(U) \triangle f_{!}(V) = (f_{!}(U) \cup f_{!}(V)) \setminus (f_{!}(U) \cap f_{!}(V))$$

$$\subset (f_{!}(U) \cup f_{!}(V)) \setminus (f_{!}(U \cap V))$$

$$= (f_{!}(U \cup V)) \setminus (f_{!}(U \cap V))$$

$$\subset f_{!}((U \cup V) \setminus (U \cap V))$$

$$= f_{!}(U \triangle V),$$

where we have used:

- 022C 1. Item 2 of Proposition 4.3.12.1.2 for the first equality.
 - 2. Item 6 of this proposition together with Item 1 of Proposition 4.3.10.1.2 for the first inclusion.
 - 3. Item 5 for the second equality.
 - 4. Item 7 for the second inclusion.
 - 5. Item 2 of Proposition 4.3.12.1.2 for the tchird equality.

Since $\mathcal{P}(Y)$ is posetal, naturality is automatic (Categories, Item 4 of Proposition 11.2.7.1.2). This finishes the proof.

Item 10: Interaction With Internal Homs of Powersets

We have

$$f_!([U, V]_X) \stackrel{\text{def}}{=} f_!(U^c \cup V)$$

$$= f_!(U^c) \cup f_!(V)$$

$$= f_*(U)^c \cup f_!(V)$$

$$\stackrel{\text{def}}{=} [f_*(U), f_!(V)]_Y,$$

where we have used:

022J

- 1. Item 5 for the second equality.
- 2. Item 17 for the third equality.

Since $\mathcal{P}(Y)$ is posetal, naturality is automatic (Categories, Item 4 of Proposition 11.2.7.1.2). This finishes the proof.

Item 11: Preservation of Colimits

This follows from Item 2 and ??, ?? of ??.1

Item 12: Oplax Preservation of Limits

The inclusion $f_1(X) \subset Y$ is automatic. See [Pro25n] for the other inclusions.

Item 13: Symmetric Strict Monoidality With Respect to Unions

This follows from Item 11.

Item 14: Symmetric Oplax Monoidality With Respect to Intersections

The inclusions in the statement follow from Item 12. Since $\mathcal{P}(Y)$ is posetal, the commutativity of the diagrams in the definition of a symmetric oplax monoidal functor is automatic (Categories, Item 4 of Proposition 11.2.7.1.2).

Item 15: Interaction With Coproducts

Item 16: Interaction With Products

Omitted.

Item 17: Relation to Codirect Images

022H

007W

007X

007Y

007Z

Applying Item 16 of Proposition 4.6.3.1.7 to $X \setminus U$, we have

$$f_*(X \setminus U) = B \setminus f_!(X \setminus (X \setminus U))$$
$$= B \setminus f_!(U).$$

Taking complements, we then obtain

$$f_!(U) = B \setminus (B \setminus f_!(U)),$$

= $B \setminus f_*(X \setminus U),$

which finishes the proof.

¹Reference: [Pro25p].

007V PROPOSITION 4.6.1.1.7 ▶ PROPERTIES OF DIRECT IMAGES II

Let $f: X \to Y$ be a function.

1. Functionality I. The assignment $f \mapsto f_!$ defines a function

$$(-)_{*|X,Y} \colon \mathsf{Sets}(X,Y) \to \mathsf{Sets}(\mathcal{P}(X),\mathcal{P}(Y)).$$

2. Functionality II. The assignment $f \mapsto f_!$ defines a function

$$(-)_{*|X,Y} \colon \mathsf{Sets}(X,Y) \to \mathsf{Pos}((\mathcal{P}(X),\subset),(\mathcal{P}(Y),\subset)).$$

3. *Interaction With Identities.* For each $X \in Obj(Sets)$, we have

$$(\mathrm{id}_X)_! = \mathrm{id}_{\mathcal{P}(X)}$$
.

4. *Interaction With Composition*. For each pair of composable functions $f: X \to Y$ and $g: Y \to Z$, we have

$$(g \circ f)_{!} = g_{!} \circ f_{!}, \qquad \begin{array}{c} \mathcal{P}(X) \xrightarrow{f_{!}} \mathcal{P}(Y) \\ & \downarrow g_{!} \\ & \mathcal{P}(Z). \end{array}$$

Item 1: Functionality I

There is nothing to prove.

Item 2: Functionality II

This follows from Item 1 of Proposition 4.6.1.1.5.

Item 3: Interaction With Identities

This follows from Remark 4.6.1.1.4 and Kan Extensions, ?? of ??.

Item 4: Interaction With Composition

This follows from Remark 4.6.1.1.4 and Kan Extensions, ?? of ??.

0080 4.6.2 Inverse Images

Let $f: X \to Y$ be a function.

0081 DEFINITION 4.6.2.1.1 ► INVERSE IMAGES

The **inverse image function associated to** f is the function¹

$$f^{-1} \colon \mathcal{P}(Y) \to \mathcal{P}(X)$$

defined by²

$$f^{-1}(V) \stackrel{\text{def}}{=} \{x \in X \mid \text{we have } f(x) \in V\}$$

for each $V \in \mathcal{P}(Y)$.

0082 REMARK 4.6.2.1.2 ➤ UNWINDING DEFINITION 4.6.2.1.1

Identifying $\mathcal{P}(Y)$ with $\mathsf{Sets}(Y, \{\mathsf{t}, \mathsf{f}\})$ via $\mathsf{Item 2}$ of Proposition 4.5.1.1.4, we see that the inverse image function associated to f is equivalently the function

$$f^* \colon \mathcal{P}(Y) \to \mathcal{P}(X)$$

defined by

$$f^*(\chi_V) \stackrel{\text{def}}{=} \chi_V \circ f$$

¹Further Notation: Also written $f^* : \mathcal{P}(Y) \to \mathcal{P}(X)$.

²Further Terminology: The set $f^{-1}(V)$ is called the **inverse image of** V **by** f.

for each $\chi_V \in \mathcal{P}(Y)$, where $\chi_V \circ f$ is the composition

$$X \xrightarrow{f} Y \xrightarrow{\chi_V} \{\text{true}, \text{false}\}$$

in Sets.

0084

0085

0083 PROPOSITION 4.6.2.1.3 ► PROPERTIES OF INVERSE IMAGES I

Let $f: X \to Y$ be a function.

1. Functoriality. The assignment $V \mapsto f^{-1}(V)$ defines a functor

$$f^{-1} \colon (\mathcal{P}(Y), \subset) \to (\mathcal{P}(X), \subset).$$

In particular, for each $U, V \in \mathcal{P}(Y)$, the following condition is satisfied:

$$(\star)$$
 If $U \subset V$, then $f^{-1}(U) \subset f^{-1}(V)$.

2. Triple Adjointness. We have a triple adjunction

$$(f_! \dashv f^{-1} \dashv f_*): \mathcal{P}(X) \leftarrow f^{-1} - \mathcal{P}(Y),$$

witnessed by:

01M4 (a) Units and counits of the form

$$id_{\mathcal{P}(X)} \hookrightarrow f^{-1} \circ f_!, \qquad id_{\mathcal{P}(Y)} \hookrightarrow f_* \circ f^{-1},$$

 $f_! \circ f^{-1} \hookrightarrow id_{\mathcal{P}(Y)}, \qquad f^{-1} \circ f_* \hookrightarrow id_{\mathcal{P}(X)},$

having components of the form

$$U \subset f^{-1}(f_!(U)), \qquad V \subset f_*(f^{-1}(V)),$$

 $f_!(f^{-1}(V)) \subset V, \qquad f^{-1}(f_*(U)) \subset U$

indexed by $U \in \mathcal{P}(X)$ and $V \in \mathcal{P}(Y)$.

01M5

(b) Bijections of sets

$$\operatorname{Hom}_{\mathcal{P}(Y)}(f_{!}(U),V) \cong \operatorname{Hom}_{\mathcal{P}(X)}(U,f^{-1}(V)),$$

$$\operatorname{Hom}_{\mathcal{P}(X)}(f^{-1}(U),V) \cong \operatorname{Hom}_{\mathcal{P}(X)}(U,f_{*}(V)),$$

natural in $U \in \mathcal{P}(X)$ and $V \in \mathcal{P}(Y)$ and (respectively) $V \in \mathcal{P}(X)$ and $U \in \mathcal{P}(Y)$. In particular:

i. The following conditions are equivalent:

- A. We have $f_!(U) \subset V$.
- B. We have $U \subset f^{-1}(V)$.
- ii. The following conditions are equivalent:
 - A. We have $f^{-1}(U) \subset V$.
 - B. We have $U \subset f_*(V)$.

01MC

01M6

01M7

01M8

01M9

01MA

01MB

3. Interaction With Unions of Families of Subsets. The diagram

$$\mathcal{P}(\mathcal{P}(Y)) \xrightarrow{(f^{-1})^{-1}} \mathcal{P}(\mathcal{P}(X))$$

$$\downarrow \bigcup \qquad \qquad \bigcup \bigcup$$

$$\mathcal{P}(Y) \xrightarrow{f^{-1}} \mathcal{P}(X)$$

commutes, i.e. we have

$$\bigcup_{V \in \mathcal{V}} f^{-1}(V) = \bigcup_{U \in f^{-1}(\mathcal{U})} U$$

for each $\mathcal{V} \in \mathcal{P}(Y)$, where $f^{-1}(\mathcal{V}) \stackrel{\text{def}}{=} (f^{-1})^{-1}(\mathcal{V})$.

01MD

4. Interaction With Intersections of Families of Subsets. The diagram

commutes, i.e. we have

$$\bigcap_{V \in \mathcal{V}} f^{-1}(V) = \bigcap_{U \in f^{-1}(\mathcal{U})} U$$

for each $\mathcal{V} \in \mathcal{P}(Y)$, where $f^{-1}(\mathcal{V}) \stackrel{\text{def}}{=} (f^{-1})^{-1}(\mathcal{V})$.

5. Interaction With Binary Unions. The diagram

$$\mathcal{P}(Y) \times \mathcal{P}(Y) \xrightarrow{f^{-1} \times f^{-1}} \mathcal{P}(X) \times \mathcal{P}(X)$$

$$\downarrow \bigcup_{\mathcal{P}(Y) \xrightarrow{f^{-1}}} \mathcal{P}(X)$$

commutes, i.e. we have

$$f^{-1}(U \cup V) = f^{-1}(U) \cup f^{-1}(V)$$

for each $U, V \in \mathcal{P}(Y)$.

6. Interaction With Binary Intersections. The diagram

$$\begin{array}{cccc} \mathcal{P}(Y) \times \mathcal{P}(Y) & \xrightarrow{f^{-1} \times f^{-1}} & \mathcal{P}(X) \times \mathcal{P}(X) \\ & & & \downarrow \cap \\ & & & \downarrow \cap \\ & & \mathcal{P}(Y) & \xrightarrow{f^{-1}} & \mathcal{P}(X) \end{array}$$

commutes, i.e. we have

$$f^{-1}(U \cap V) = f^{-1}(U) \cap f^{-1}(V)$$

for each $U, V \in \mathcal{P}(Y)$.

01ME

01MF

01MG

7. Interaction With Differences. The diagram

$$\mathcal{P}(Y)^{\mathrm{op}} \times \mathcal{P}(Y) \xrightarrow{f^{\mathrm{op},-1} \times f^{-1}} \mathcal{P}(X)^{\mathrm{op}} \times \mathcal{P}(X)$$

$$\downarrow \qquad \qquad \downarrow \qquad \qquad \qquad \downarrow \qquad \qquad \qquad \downarrow \qquad \qquad \qquad \downarrow \qquad$$

commutes, i.e. we have

$$f^{-1}(U \setminus V) = f^{-1}(U) \setminus f^{-1}(V)$$

for each $U, V \in \mathcal{P}(X)$.

01MH

8. Interaction With Complements. The diagram

$$\mathcal{P}(Y)^{\mathsf{op}} \xrightarrow{f^{-1,\mathsf{op}}} \mathcal{P}(X)^{\mathsf{op}} \\
\xrightarrow{(-)^{\mathsf{c}}} \qquad \qquad \downarrow^{(-)^{\mathsf{c}}} \\
\mathcal{P}(Y) \xrightarrow{f^{-1}} \mathcal{P}(X)$$

commutes, i.e. we have

$$f^{-1}(U^{\mathsf{c}}) = f^{-1}(U)^{\mathsf{c}}$$

for each $U \in \mathcal{P}(X)$.

01MJ

9. Interaction With Symmetric Differences. The diagram

$$\mathcal{P}(Y)^{\mathsf{op}} \times \mathcal{P}(Y) \xrightarrow{f^{\mathsf{op},-1} \times f^{-1}} \mathcal{P}(X)^{\mathsf{op}} \times \mathcal{P}(X)$$

$$\downarrow^{\triangle} \qquad \qquad \downarrow^{\triangle}$$

$$\mathcal{P}(Y) \xrightarrow{f^{-1}} \mathcal{P}(X)$$

i.e. we have

$$f^{-1}(U) \bigtriangleup f^{-1}(V) = f^{-1}(U \bigtriangleup V)$$

for each $U, V \in \mathcal{P}(Y)$.

01MK

10. Interaction With Internal Homs of Powersets. The diagram

$$\mathcal{P}(Y)^{\mathsf{op}} \times \mathcal{P}(Y) \xrightarrow{f^{-1,\mathsf{op}} \times f^{-1}} \mathcal{P}(X)^{\mathsf{op}} \times \mathcal{P}(X)$$

$$\downarrow [-1,-2]_{Y} \qquad \qquad \downarrow [-1,-2]_{X}$$

$$\mathcal{P}(Y) \xrightarrow{f^{-1}} \mathcal{P}(X)$$

commutes, i.e. we have an equality of sets

$$f^{-1}([U,V]_Y) = [f^{-1}(U), f^{-1}(V)]_X,$$

natural in $U, V \in \mathcal{P}(X)$.

0086

11. Preservation of Colimits. We have an equality of sets

$$f^{-1}\left(\bigcup_{i\in I}U_i\right)=\bigcup_{i\in I}f^{-1}(U_i),$$

natural in $\{U_i\}_{i\in I}\in\mathcal{P}(Y)^{\times I}$. In particular, we have equalities

$$f^{-1}(U) \cup f^{-1}(V) = f^{-1}(U \cup V),$$

 $f^{-1}(\emptyset) = \emptyset,$

natural in $U, V \in \mathcal{P}(Y)$.

0087

12. Preservation of Limits. We have an equality of sets

$$f^{-1}\left(\bigcap_{i\in I}U_i\right)=\bigcap_{i\in I}f^{-1}(U_i),$$

natural in $\{U_i\}_{i\in I}\in\mathcal{P}(Y)^{\times I}$. In particular, we have equalities

$$f^{-1}(U) \cap f^{-1}(V) = f^{-1}(U \cap V),$$

 $f^{-1}(Y) = X,$

natural in $U, V \in \mathcal{P}(Y)$.

0088

13. Symmetric Strict Monoidality With Respect to Unions. The inverse image function of Item 1 has a symmetric strict monoidal structure

$$(f^{-1}, f^{-1,\otimes}, f_{\downarrow}^{-1,\otimes}) \colon (\mathcal{P}(Y), \cup, \emptyset) \to (\mathcal{P}(X), \cup, \emptyset),$$

being equipped with equalities

$$f_{U,V}^{-1,\otimes} : f^{-1}(U) \cup f^{-1}(V) \xrightarrow{=} f^{-1}(U \cup V),$$

$$f_{\parallel}^{-1,\otimes} : \varnothing \xrightarrow{=} f^{-1}(\varnothing),$$

natural in $U, V \in \mathcal{P}(Y)$.

0089

14. Symmetric Strict Monoidality With Respect to Intersections. The inverse image function of Item 1 has a symmetric strict monoidal structure

$$(f^{-1}, f^{-1, \otimes}, f_{\mathbb{1}}^{-1, \otimes}) \colon (\mathcal{P}(Y), \cap, Y) \to (\mathcal{P}(X), \cap, X),$$

being equipped with equalities

$$f_{U,V}^{-1,\otimes} \colon f^{-1}(U) \cap f^{-1}(V) \xrightarrow{=} f^{-1}(U \cap V),$$

$$f_{1}^{-1,\otimes} \colon X \xrightarrow{=} f^{-1}(Y),$$

natural in $U, V \in \mathcal{P}(Y)$.

008A

15. Interaction With Coproducts. Let $f\colon X\to X'$ and $g\colon Y\to Y'$ be maps of sets. We have

$$(f \mid \mid g)^{-1}(U' \mid \mid V') = f^{-1}(U') \mid \mid g^{-1}(V')$$

for each $U' \in \mathcal{P}(X')$ and each $V' \in \mathcal{P}(Y')$.

008B

16. *Interaction With Products*. Let $f: X \to X'$ and $g: Y \to Y'$ be maps of sets. We have

$$(f\boxtimes_{X'\times Y'}g)^{-1}(U'\boxtimes_{X'\times Y'}V')=f^{-1}(U')\boxtimes_{X\times Y}g^{-1}(V')$$

for each $U' \in \mathcal{P}(X')$ and each $V' \in \mathcal{P}(Y')$.

PROOF 4.6.2.1.4 ► PROOF OF PROPOSITION 4.6.2.1.3

Item 1: Functoriality

Omitted.

Item 2: Triple Adjointness

This follows from Remark 4.6.1.1.4, Remark 4.6.2.1.2, Remark 4.6.3.1.4, and Kan Extensions, ?? of ??.

Item 3: Interaction With Unions of Families of Subsets

We have

$$\bigcup_{U \in f^{-1}(\mathcal{V})} U = \bigcup_{U \in \{f^{-1}(V) \in \mathcal{P}(X) \mid V \in \mathcal{V}\}} U$$
$$= \bigcup_{V \in \mathcal{V}} f^{-1}(V).$$

This finishes the proof.

Item 4: Interaction With Intersections of Families of Subsets

We have

$$\bigcap_{U \in f^{-1}(\mathcal{V})} U = \bigcap_{U \in \{f^{-1}(V) \in \mathcal{P}(X) \mid V \in \mathcal{V}\}} U$$
$$= \bigcap_{V \in \mathcal{V}} f^{-1}(V).$$

This finishes the proof.

008H 4.6.3 Codirect Images

Let $f: X \to Y$ be a function.

008J DEFINITION 4.6.3.1.1 ► CODIRECT IMAGES

The **codirect image function associated to** f is the function

$$f_* \colon \mathcal{P}(X) \to \mathcal{P}(Y)$$

defined by1,2

$$f_*(U) \stackrel{\text{def}}{=} \left\{ y \in Y \middle| \begin{array}{l} \text{for each } x \in X, \text{ if we have} \\ f(x) = y, \text{ then } x \in U \end{array} \right\}$$
$$= \left\{ y \in Y \middle| \text{ we have } f^{-1}(y) \subset U \right\}$$

for each $U \in \mathcal{P}(X)$.

¹Further Terminology: The set $f_*(U)$ is called the **codirect image of** U **by** f.

²We also have

$$f_*(U) = f_!(U^{\mathsf{c}})^{\mathsf{c}}$$

$$\stackrel{\text{def}}{=} Y \setminus f_!(X \setminus U);$$

see Item 16 of Proposition 4.6.3.1.7.

008K NOTATION 4.6.3.1.2 ► FURTHER NOTATION FOR CODIRECT IMAGES

Sometimes one finds the notation

$$\forall_f \colon \mathcal{P}(X) \to \mathcal{P}(Y)$$

for $f_!$. This notation comes from the fact that the following statements are equivalent, where $y \in Y$ and $U \in \mathcal{P}(X)$:

- We have $y \in \forall_f(U)$.
- For each $x \in X$, if y = f(x), then $x \in U$.

We will not make use of this notation elsewhere in Clowder.

WARNING 4.6.3.1.3 ► NOTATION FOR CODIRECT IMAGES IS CONFUSING

See Warning 4.6.1.1.3.

008L REMARK 4.6.3.1.4 ➤ Unwinding Definition 4.6.3.1.1

Identifying $\mathcal{P}(X)$ with $\mathsf{Sets}(X,\{\mathsf{t},\mathsf{f}\})$ via Item 2 of Proposition 4.5.1.1.4, we see that the codirect image function associated to f is equivalently the function

$$f_* \colon \mathcal{P}(X) \to \mathcal{P}(Y)$$

defined by

$$\begin{split} f_*(\chi_U) &\stackrel{\text{def}}{=} \operatorname{Ran}_f(\chi_U) \\ &= \lim ((\underbrace{(-_1)}_{x \in X} \xrightarrow{x} f) \xrightarrow{\operatorname{pr}} X \xrightarrow{\chi_U} \{\operatorname{true}, \operatorname{false}\}) \\ &= \lim_{\substack{x \in X \\ f(x) = -_1}} (\chi_U(x)) \\ &= \bigwedge_{\substack{x \in X \\ f(x) = -_1}} (\chi_U(x)). \end{split}$$

where we have used ?? for the second equality. In other words, we have

$$[f_*(\chi_U)](y) = \bigwedge_{\substack{x \in X \\ f(x) = y}} (\chi_U(x))$$

$$= \begin{cases} \text{true} & \text{if, for each } x \in X \text{ such that} \\ f(x) = y, \text{ we have } x \in U, \end{cases}$$

$$\text{false} & \text{otherwise}$$

$$= \begin{cases} \text{true} & \text{if } f^{-1}(y) \subset U \\ \text{false} & \text{otherwise} \end{cases}$$

for each $y \in Y$.

008M

DEFINITION 4.6.3.1.5 \blacktriangleright The Image and Complement Parts of f_*

Let U be a subset of X.^{1,2}

008N

1. The image part of the codirect image $f_*(U)$ of U is the set $f_{*,\mathrm{im}}(U)$ defined by

$$f_{*,\text{im}}(U) \stackrel{\text{def}}{=} f_*(U) \cap \text{Im}(f)$$

$$= \left\{ y \in Y \middle| \begin{array}{l} \text{we have } f^{-1}(y) \subset U \\ \text{and } f^{-1}(y) \neq \emptyset. \end{array} \right\}.$$

008P

2. The complement part of the codirect image $f_*(U)$ of U is the set $f_{*,cp}(U)$ defined by

$$f_{*,cp}(U) \stackrel{\text{def}}{=} f_*(U) \cap (Y \setminus \text{Im}(f))$$

$$= Y \setminus \text{Im}(f)$$

$$= \left\{ y \in Y \middle| \text{ we have } f^{-1}(y) \subset U \right\}$$

$$= \left\{ y \in Y \middle| f^{-1}(y) = \emptyset \right\}.$$

$$f_*(U) = f_{*,im}(U) \cup f_{*,cp}(U),$$

as

$$\begin{split} f_*(U) &= f_*(U) \cap Y \\ &= f_*(U) \cap (\operatorname{Im}(f) \cup (Y \setminus \operatorname{Im}(f))) \\ &= (f_*(U) \cap \operatorname{Im}(f)) \cup (f_*(U) \cap (Y \setminus \operatorname{Im}(f))) \\ &\stackrel{\text{def}}{=} f_{*,\operatorname{im}}(U) \cup f_{*,\operatorname{cp}}(U). \end{split}$$

²In terms of the meet computation of $f_*(U)$ of Remark 4.6.3.1.4, namely

$$f_*(\chi_U) = \bigwedge_{\substack{x \in X \\ f(x) = -1}} (\chi_U(x)),$$

we see that $f_{*,\text{im}}$ corresponds to meets indexed over nonempty sets, while $f_{*,\text{cp}}$ corresponds to meets indexed over the empty set.

¹Note that we have

0231

0232

0233

008Q EXAMPLE 4.6.3.1.6 ➤ EXAMPLES OF CODIRECT IMAGES

Here are some examples of codirect images.

1. *Multiplication by Two*. Consider the function $f: \mathbb{N} \to \mathbb{N}$ given by

$$f(n) \stackrel{\text{def}}{=} 2n$$

for each $n \in \mathbb{N}$. Since f is injective, we have

$$f_{*,\text{im}}(U) = f_!(U)$$

 $f_{*,cp}(U) = \{ \text{odd natural numbers} \}$

for any $U \subset \mathbb{N}$. In particular, we have

 $f_*(\{\text{even natural numbers}\}) = \mathbb{N}.$

2. *Parabolas*. Consider the function $f: \mathbb{R} \to \mathbb{R}$ given by

$$f(x) \stackrel{\text{def}}{=} x^2$$

for each $x \in \mathbb{R}$. We have

$$f_{*,cp}(U) = \mathbb{R}_{<0}$$

for any $U \subset \mathbb{R}$. Moreover, since $f^{-1}(x) = \{-\sqrt{x}, \sqrt{x}\}$, we have e.g.:

$$f_{*,\text{im}}([0,1]) = \{0\},$$

$$f_{*,\text{im}}([-1,1]) = [0,1],$$

$$f_{*,\text{im}}([1,2]) = \emptyset,$$

$$f_{*,\text{im}}([-2,-1] \cup [1,2]) = [1,4].$$

3. Circles. Consider the function $f: \mathbb{R}^2 \to \mathbb{R}$ given by

$$f(x,y) \stackrel{\text{def}}{=} x^2 + y^2$$

for each $(x, y) \in \mathbb{R}^2$. We have

$$f_{*,cp}(U) = \mathbb{R}_{<0}$$

008S

008T

01ML

for any $U \subset \mathbb{R}^2$, and since

$$f^{-1}(r) = \begin{cases} \text{a circle of radius } r \text{ about the origin} & \text{if } r > 0, \\ \{(0,0)\} & \text{if } r = 0, \\ \emptyset & \text{if } r < 0, \end{cases}$$

we have e.g.:

$$f_{*,\text{im}}([-1,1] \times [-1,1]) = [0,1],$$

$$f_{*,\text{im}}(([-1,1] \times [-1,1]) \setminus [-1,1] \times \{0\}) = \emptyset.$$

008R PROPOSITION 4.6.3.1.7 ► PROPERTIES OF CODIRECT IMAGES I

Let $f: X \to Y$ be a function.

1. Functoriality. The assignment $U \mapsto f_*(U)$ defines a functor

$$f_* \colon (\mathcal{P}(X), \subset) \to (\mathcal{P}(Y), \subset).$$

In particular, for each $U, V \in \mathcal{P}(X)$, the following condition is satisfied:

$$(\star)$$
 If $U \subset V$, then $f_*(U) \subset f_*(V)$.

2. Triple Adjointness. We have a triple adjunction

$$(f_! \dashv f^{-1} \dashv f_*): \mathcal{P}(X) \leftarrow f^{-1} - \mathcal{P}(Y),$$

witnessed by:

(a) Units and counits of the form

$$id_{\mathcal{P}(X)} \hookrightarrow f^{-1} \circ f_!, \qquad id_{\mathcal{P}(Y)} \hookrightarrow f_* \circ f^{-1},$$

 $f_! \circ f^{-1} \hookrightarrow id_{\mathcal{P}(Y)}, \qquad f^{-1} \circ f_* \hookrightarrow id_{\mathcal{P}(X)},$

having components of the form

$$U \subset f^{-1}(f_!(U)), \qquad V \subset f_*(f^{-1}(V)),$$

 $f_!(f^{-1}(V)) \subset V, \qquad f^{-1}(f_*(U)) \subset U$

indexed by $U \in \mathcal{P}(X)$ and $V \in \mathcal{P}(Y)$.

(b) Bijections of sets

$$\operatorname{Hom}_{\mathcal{P}(Y)}(f_!(U), V) \cong \operatorname{Hom}_{\mathcal{P}(X)}(U, f^{-1}(V)),$$

 $\operatorname{Hom}_{\mathcal{P}(X)}(f^{-1}(U), V) \cong \operatorname{Hom}_{\mathcal{P}(X)}(U, f_*(V)),$

natural in $U \in \mathcal{P}(X)$ and $V \in \mathcal{P}(Y)$ and (respectively) $V \in \mathcal{P}(X)$ and $U \in \mathcal{P}(Y)$. In particular:

i. The following conditions are equivalent:

A. We have $f_!(U) \subset V$.

B. We have $U \subset f^{-1}(V)$.

ii. The following conditions are equivalent:

A. We have $f^{-1}(U) \subset V$.

B. We have $U \subset f_*(V)$.

3. Interaction With Unions of Families of Subsets. The diagram

$$\mathcal{P}(\mathcal{P}(X)) \xrightarrow{(f_*)_*} \mathcal{P}(\mathcal{P}(Y))$$

$$\bigcup_{f_*} \bigcup_{f_*} \bigcup_{f_*} \mathcal{P}(Y)$$

commutes, i.e. we have

$$\bigcup_{U\in\mathcal{U}}f_*(U)=\bigcup_{V\in f_*(\mathcal{U})}V$$

for each $\mathcal{U} \in \mathcal{P}(X)$, where $f_*(\mathcal{U}) \stackrel{\text{def}}{=} (f_*)_*(\mathcal{U})$.

01MM

01MN

01MP

01MQ

01MR

01MS

01MT

01MU

01MV

4. Interaction With Intersections of Families of Subsets. The diagram

$$\mathcal{P}(\mathcal{P}(X)) \xrightarrow{(f_*)_*} \mathcal{P}(\mathcal{P}(Y))$$

$$\bigcap_{\downarrow} \qquad \qquad \qquad \downarrow \cap$$

$$\mathcal{P}(X) \xrightarrow{f_*} \mathcal{P}(Y)$$

commutes, i.e. we have

$$\bigcap_{U \in \mathcal{U}} f_*(U) = \bigcap_{V \in f_*(\mathcal{U})} V$$

for each $\mathcal{U} \in \mathcal{P}(X)$, where $f_*(\mathcal{U}) \stackrel{\text{def}}{=} (f_*)_*(\mathcal{U})$.

01MW

5. *Interaction With Binary Unions*. Let $f: X \to Y$ be a function. We have a natural transformation

$$\mathcal{P}(X) \times \mathcal{P}(X) \xrightarrow{f_* \times f_*} \mathcal{P}(Y) \times \mathcal{P}(Y)$$

$$\downarrow \qquad \qquad \qquad \downarrow \cup$$

$$\mathcal{P}(X) \xrightarrow{f_*} \mathcal{P}(Y)$$

with components

$$f_*(U) \cup f_*(V) \subset f_*(U \cup V)$$

indexed by $U, V \in \mathcal{P}(X)$.

01MX

6. Interaction With Binary Intersections. The diagram

$$\mathcal{P}(X) \times \mathcal{P}(X) \xrightarrow{f_* \times f_*} \mathcal{P}(Y) \times \mathcal{P}(Y)$$

$$\uparrow \qquad \qquad \qquad \downarrow \cap$$

$$\mathcal{P}(X) \xrightarrow{f_*} \mathcal{P}(Y)$$

commutes, i.e. we have

$$f_*(U) \cap f_*(V) = f_*(U \cap V)$$

for each $U, V \in \mathcal{P}(X)$.

7. Interaction With Complements. The diagram

$$\mathcal{P}(X)^{\text{op}} \xrightarrow{f_!^{\text{op}}} \mathcal{P}(Y)^{\text{op}}$$

$$(-)^{\text{c}} \downarrow \qquad \qquad \downarrow (-)^{\text{c}}$$

$$\mathcal{P}(X) \xrightarrow{f_*} \mathcal{P}(Y)$$

commutes, i.e. we have

$$f_*(U^{\mathsf{c}}) = f_!(U)^{\mathsf{c}}$$

for each $U \in \mathcal{P}(X)$.

8. *Interaction With Symmetric Differences*. We have a natural transformation

$$\mathcal{P}(X)^{\mathrm{op}} \times \mathcal{P}(X) \xrightarrow{f_*^{\mathrm{op}} \times f_*} \mathcal{P}(Y)^{\mathrm{op}} \times \mathcal{P}(Y)$$

$$\downarrow^{\triangle} \qquad \qquad \downarrow^{\triangle}$$

$$\mathcal{P}(X) \xrightarrow{f_*} \mathcal{P}(Y)$$

with components

$$f_*(U \triangle V) \subset f_*(U) \triangle f_*(V)$$

indexed by $U, V \in \mathcal{P}(X)$.

01MZ

01MY

01N0

9. Interaction With Internal Homs of Powersets. We have a natural transformation

with components

$$[f_!(U), f_*(V)]_Y \subset f_*([U, V]_X)$$

indexed by $U, V \in \mathcal{P}(X)$.

008U

10. Lax Preservation of Colimits. We have an inclusion of sets

$$\bigcup_{i\in I} f_*(U_i) \subset f_*\left(\bigcup_{i\in I} U_i\right),\,$$

natural in $\{U_i\}_{i\in I}\in \mathcal{P}(X)^{\times I}$. In particular, we have inclusions

$$f_*(U) \cup f_*(V) \hookrightarrow f_*(U \cup V),$$

 $\emptyset \hookrightarrow f_*(\emptyset),$

natural in $U, V \in \mathcal{P}(X)$.

008V

11. Preservation of Limits. We have an equality of sets

$$f_*\left(\bigcap_{i\in I}U_i\right)=\bigcap_{i\in I}f_*(U_i),$$

natural in $\{U_i\}_{i\in I}\in\mathcal{P}(X)^{\times I}$. In particular, we have equalities

$$f^{-1}(U \cap V) = f_*(U) \cap f^{-1}(V),$$

$$f_*(X) = Y,$$

natural in $U, V \in \mathcal{P}(X)$.

008W

12. Symmetric Lax Monoidality With Respect to Unions. The codirect image function of Item 1 has a symmetric lax monoidal structure

$$(f_*, f_*^{\otimes}, f_{*|1}^{\otimes}) \colon (\mathcal{P}(X), \cup, \emptyset) \to (\mathcal{P}(Y), \cup, \emptyset),$$

being equipped with inclusions

$$f_{*|U,V}^{\otimes} \colon f_{*}(U) \cup f_{*}(V) \hookrightarrow f_{*}(U \cup V),$$
$$f_{*|\mathfrak{I}}^{\otimes} \colon \emptyset \hookrightarrow f_{*}(\emptyset),$$

natural in $U, V \in \mathcal{P}(X)$.

008X

13. Symmetric Strict Monoidality With Respect to Intersections. The direct image function of Item 1 has a symmetric strict monoidal structure

$$(f_*, f_*^{\otimes}, f_{*|1}^{\otimes}) \colon (\mathcal{P}(X), \cap, X) \to (\mathcal{P}(Y), \cap, Y),$$

being equipped with equalities

$$f_{*|U,V}^{\otimes} \colon f_{*}(U \cap V) \xrightarrow{=} f_{*}(U) \cap f_{*}(V),$$
$$f_{*|\mathbb{1}}^{\otimes} \colon f_{*}(X) \xrightarrow{=} Y,$$

natural in $U, V \in \mathcal{P}(X)$.

008Y

14. *Interaction With Coproducts*. Let $f: X \to X'$ and $g: Y \to Y'$ be maps of sets. We have

$$(f \coprod g)_*(U \coprod V) = f_*(U) \coprod g_*(V)$$

for each $U \in \mathcal{P}(X)$ and each $V \in \mathcal{P}(Y)$.

008Z

15. *Interaction With Products*. Let $f: X \to X'$ and $g: Y \to Y'$ be maps of sets. We have

$$(f\boxtimes_{X\times Y}g)_*(U\boxtimes_{X\times Y}V)=f_*(U)\boxtimes_{X'\times Y'}g_*(V)$$

for each $U \in \mathcal{P}(X)$ and each $V \in \mathcal{P}(Y)$.

0090

16. Relation to Direct Images. We have

$$f_*(U) = f_!(U^{c})^{c}$$
$$= Y \setminus f_!(X \setminus U)$$

for each $U \in \mathcal{P}(X)$.

0091

17. Interaction With Injections. If f is injective, then we have

$$f_{*,\text{im}}(U) = f_!(U),$$

 $f_{*,\text{cp}}(U) = Y \setminus \text{Im}(f),$

and so

$$f_*(U) = f_{*,\text{im}}(U) \cup f_{*,\text{cp}}(U)$$
$$= f_!(U) \cup (Y \setminus \text{Im}(f))$$

for each $U \in \mathcal{P}(X)$.

0092

18. *Interaction With Surjections*. If f is surjective, then we have

$$f_{*,\text{im}}(U) \subset f_!(U),$$

 $f_{*,\text{cp}}(U) = \emptyset,$

and so

$$f_*(U) \subset f_!(U)$$

for each $U \in \mathcal{P}(X)$.

PROOF 4.6.3.1.8 ► PROOF OF PROPOSITION 4.6.3.1.7

Item 1: Functoriality

Omitted.

Item 2: Triple Adjointness

This follows from Remark 4.6.1.1.4, Remark 4.6.2.1.2, Remark 4.6.3.1.4, and Kan Extensions, ?? of ??.

Item 3: Interaction With Unions of Families of Subsets

We have

$$\bigcup_{V \in f_*(\mathcal{U})} V = \bigcup_{V \in \{f_*(U) \in \mathcal{P}(X) \mid U \in \mathcal{U}\}} V$$
$$= \bigcup_{U \in \mathcal{U}} f_*(U).$$

This finishes the proof.

Item 4: Interaction With Intersections of Families of Subsets

We have

$$\bigcap_{V \in f_*(\mathcal{U})} V = \bigcap_{V \in \{f_*(U) \in \mathcal{P}(X) \mid U \in \mathcal{U}\}} V$$
$$= \bigcap_{U \in \mathcal{U}} f_*(U).$$

This finishes the proof.

Item 5: Interaction With Binary Unions

We have

$$f_*(U) \cup f_*(V) = f_!(U^c)^c \cup f_!(V^c)^c$$

$$= (f_!(U^c) \cap f_!(V^c))^c$$

$$\subset (f_!(U^c \cap V^c))^c$$

$$= f_!((U \cup V)^c)^c$$

$$= f_*(U \cup V),$$

where:

023X

1. We have used Item 16 for the first equality.

023Y

2. We have used Item 2 of Proposition 4.3.11.1.2 for the second equality.

023Z

3. We have used Item 6 of Proposition 4.6.1.1.5 for the third equality.

0240

4. We have used Item 2 of Proposition 4.3.11.1.2 for the fourth equality.

0241

5. We have used Item 16 for the last equality.

This finishes the proof.

Item 6: Interaction With Binary Intersections

This follows from Item 11.

Item 7: Interaction With Complements

Omitted.

Item 8: Interaction With Symmetric Differences

Omitted.

Item 9: Interaction With Internal Homs of Powersets

We have

$$[f_!(U), f^!(V)]_X \stackrel{\text{def}}{=} f_!(U)^{c} \cup f_*(V)$$

$$= f_*(U^{c}) \cup f_*(V)$$

$$\subset f_*(U^{c} \cup V)$$

$$\stackrel{\text{def}}{=} f_*([U, V]_X),$$

where we have used:

0242

1. Item 7 of Proposition 4.6.3.1.7 for the second equality.

0243

2. Item 5 of Proposition 4.6.3.1.7 for the inclusion.

Since $\mathcal{P}(X)$ is posetal, naturality is automatic (Categories, Item 4 of Proposition 11.2.7.1.2). This finishes the proof.

Item 10: Lax Preservation of Colimits

Omitted.

Item 11: Preservation of Limits

This follows from Item 2 and ??, ?? of ??.

Item 12: Symmetric Lax Monoidality With Respect to Unions

This follows from Item 10.

Item 13: Symmetric Strict Monoidality With Respect to Intersections

This follows from Item 11.

Item 14: Interaction With Coproducts

Omitted.

Item 15: Interaction With Products

Omitted.

Item 16: Relation to Direct Images

We claim that $f_*(U) = Y \setminus f_!(X \setminus U)$.

• The First Implication. We claim that

$$f_*(U) \subset Y \setminus f_!(X \setminus U).$$

Let $y \in f_*(U)$. We need to show that $y \notin f_!(X \setminus U)$, i.e. that there is no $x \in X \setminus U$ such that f(x) = y.

This is indeed the case, as otherwise we would have $x \in f^{-1}(y)$ and $x \notin U$, contradicting $f^{-1}(y) \subset U$ (which holds since $y \in f_*(U)$).

Thus $y \in Y \setminus f_!(X \setminus U)$.

• The Second Implication. We claim that

$$Y \setminus f_!(X \setminus U) \subset f_*(U)$$
.

Let $y \in Y \setminus f_!(X \setminus U)$. We need to show that $y \in f_*(U)$, i.e. that $f^{-1}(y) \subset U$.

Since $y \notin f_!(X \setminus U)$, there exists no $x \in X \setminus U$ such that y = f(x), and hence $f^{-1}(y) \subset U$.

Thus $y \in f_*(U)$.

This finishes the proof of Item 16.

Item 17: Interaction With Injections

Omitted.

Item 18: Interaction With Surjections

Omitted.

0093 PROPOSITION 4.6.3.1.9 ► PROPERTIES OF CODIRECT IMAGES II

Let $f: X \to B$ be a function.

1. Functionality I. The assignment $f\mapsto f_*$ defines a function

$$(-)_{!|X,Y} : \mathsf{Sets}(X,Y) \to \mathsf{Sets}(\mathcal{P}(X),\mathcal{P}(Y)).$$

2. Functionality II. The assignment $f\mapsto f_*$ defines a function

$$(-)_{1|X|Y}: \mathsf{Sets}(X,Y) \to \mathsf{Pos}((\mathcal{P}(X),\subset),(\mathcal{P}(Y),\subset)).$$

3. *Interaction With Identities.* For each $X \in \text{Obj}(\mathsf{Sets})$, we have

$$(\mathrm{id}_X)_* = \mathrm{id}_{\mathcal{P}(X)}$$
.

4. Interaction With Composition. For each pair of composable functions $f: X \to Y$ and $g: Y \to Z$, we have

$$(g \circ f)_* = g_* \circ f_*,$$

$$\mathcal{P}(X) \xrightarrow{f_*} \mathcal{P}(Y)$$

$$\downarrow g_*$$

$$\mathcal{P}(Z)$$

PROOF 4.6.3.1.10 ► PROOF OF PROPOSITION 4.6.3.1.9

Item 1: Functionality I

There is nothing to prove.

Item 2: Functionality II

This follows from Item 1 of Proposition 4.6.3.1.7.

Item 3: Interaction With Identities

This follows from Remark 4.6.3.1.4 and Kan Extensions, ?? of ??.

Item 4: Interaction With Composition

This follows from Remark 4.6.3.1.4 and Kan Extensions, ?? of ??.

01N1 4.6.4 A Six-Functor Formalism for Sets

01N2 REMARK 4.6.4.1.1 ➤ A SIX-FUNCTOR FORMALISM FOR SETS

The assignment $X \mapsto \mathcal{P}(X)$ together with the functors f_* , f^{-1} , and $f_!$ of Item 1 of Proposition 4.6.1.1.5, Item 1 of Proposition 4.6.2.1.3, and Item 1 of Proposition 4.6.3.1.7, and the functors

$$-_{1} \cap -_{2} \colon \mathcal{P}(X) \times \mathcal{P}(X) \to \mathcal{P}(X),$$
$$[-_{1}, -_{2}]_{X} \colon \mathcal{P}(X)^{\mathsf{op}} \times \mathcal{P}(X) \to \mathcal{P}(X)$$

of Item 1 of Proposition 4.3.9.1.2 and Item 1 of Proposition 4.4.7.1.4 satisfy several properties reminiscent of a six functor formalism in the sense of ??.

We collect these properties in Proposition 4.6.4.1.2 below.¹

¹See also [nLa25].

PROPOSITION 4.6.4.1.2 ► A Six-Functor Formalism for Sets

Let X be a set.

01N4

1. The Beck-Chevalley Condition. Let

$$X \times_{Z} Y \xrightarrow{\operatorname{pr}_{2}} Y$$

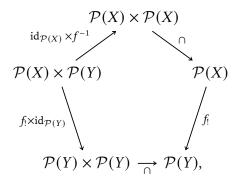

$$\downarrow^{\operatorname{pr}_{1}} \qquad \downarrow^{g}$$

$$X \xrightarrow{f} Z$$

be a pullback diagram in Sets. We have

01N5

2. The Projection Formula I. The diagram

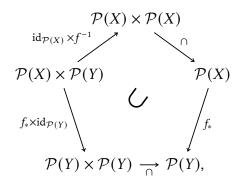

commutes, i.e. we have

$$f_!(U\cap f^{-1}(V))=f_!(U)\cap V$$

for each $U \in \mathcal{P}(X)$ and each $V \in \mathcal{P}(Y)$.

01N6

3. The Projection Formula II. We have a natural transformation

with components

$$f_*(U) \cap V \subset f_*(U \cap f^{-1}(V))$$

indexed by $U \in \mathcal{P}(X)$ and $V \in \mathcal{P}(Y)$.

01N7

4. Strong Closed Monoidality. The diagram

$$\mathcal{P}(Y)^{\text{op}} \times \mathcal{P}(Y) \xrightarrow{f^{-1,\text{op}} \times f^{-1}} \mathcal{P}(X)^{\text{op}} \times \mathcal{P}(X) \\
\downarrow [-1,-2]_{Y} \downarrow \qquad \qquad \downarrow [-1,-2]_{X} \\
\mathcal{P}(Y) \xrightarrow{f^{-1}} \mathcal{P}(X)$$

commutes, i.e. we have an equality of sets

$$f^{-1}([U,V]_Y) = [f^{-1}(U), f^{-1}(V)]_X,$$

natural in $U, V \in \mathcal{P}(X)$.

01N8

5. The External Tensor Product. We have an external tensor product

$$-_1 \boxtimes_{X \times Y} -_2 : \mathcal{P}(X) \times \mathcal{P}(Y) \to \mathcal{P}(X \times Y)$$

given by

$$U \boxtimes_{X \times Y} V \stackrel{\text{def}}{=} \operatorname{pr}_1^{-1}(U) \cap \operatorname{pr}_2^{-1}(V)$$

$$= \{(u, v) \in X \times Y \mid u \in U \text{ and } v \in V\}.$$

This is the same map as the one in Item 5 of Proposition 4.4.1.1.4. Moreover, the following conditions are satisfied:

(a) Interaction With Direct Images. Let $f: X \to X'$ and $g: Y \to Y'$ be functions. The diagram

$$\begin{array}{c|c} \mathcal{P}(X) \times \mathcal{P}(Y) & \xrightarrow{f_! \times g_!} & \mathcal{P}(X') \times \mathcal{P}(Y') \\ & \boxtimes_{X \times Y} & & & & \boxtimes_{X' \times Y'} \\ & \mathcal{P}(X \times Y) & \xrightarrow{f_! \times g_!} & \mathcal{P}(X' \times Y') \end{array}$$

commutes, i.e. we have

$$[f_! \times g_!](U \boxtimes_{X \times Y} V) = f_!(U) \boxtimes_{X' \times Y'} g_!(V)$$

for each $(U, V) \in \mathcal{P}(X) \times \mathcal{P}(Y)$.

(b) *Interaction With Inverse Images*. Let $f: X \to X'$ and $g: Y \to Y'$ be functions. The diagram

commutes, i.e. we have

$$[f^{-1}\times g^{-1}](U\boxtimes_{X'\times Y'}V)=f^{-1}(U)\boxtimes_{X\times Y}g^{-1}(V)$$

for each $(U, V) \in \mathcal{P}(X') \times \mathcal{P}(Y')$.

01N9

01NA

01NB

(c) Interaction With Codirect Images. Let $f: X \to X'$ and $g: Y \to Y'$ be functions. The diagram

$$\mathcal{P}(X) \times \mathcal{P}(Y) \xrightarrow{f_* \times g_*} \mathcal{P}(X') \times \mathcal{P}(Y')$$

$$\boxtimes_{X \times Y} \qquad \qquad \qquad \bigcup_{X' \times Y'} \boxtimes_{X' \times Y'} \mathcal{P}(X \times Y) \xrightarrow{f_* \times g_*} \mathcal{P}(X' \times Y')$$

commutes, i.e. we have

$$[f_* \times g_*](U \boxtimes_{X \times Y} V) = f_*(U) \boxtimes_{X' \times Y'} g_*(V)$$

for each $(U, V) \in \mathcal{P}(X) \times \mathcal{P}(Y)$.

01NC

(d) Interaction With Diagonals. The diagram

$$\mathcal{P}(X) \times \mathcal{P}(X) \xrightarrow{\boxtimes_{X \times X}} \mathcal{P}(X \times X)$$

$$\downarrow^{\Delta_X^{-1}}$$

$$\mathcal{P}(X),$$

i.e. we have

$$U \cap V = \Delta_X^{-1}(U \boxtimes_{X \times X} V)$$

for each $U, V \in \mathcal{P}(X)$.

01ND

6. The Dualisation Functor. We have a functor

$$D_X \colon \mathcal{P}(X)^{\mathsf{op}} \to \mathcal{P}(X)$$

given by

$$D_X(U) \stackrel{\text{def}}{=} [U, \emptyset]_X$$
$$\stackrel{\text{def}}{=} U^{\mathsf{c}}$$

for each $U \in \mathcal{P}(X)$, as in Item 5 of Proposition 4.4.7.1.4, satisfying the following conditions:

01NE

(a) Duality. We have

$$D_X(D_X(U)) = U,$$

01NF

(b) Duality. The diagram

$$\mathcal{P}(X)^{\mathrm{op}} \times \mathcal{P}(X)^{\mathrm{op}} \xrightarrow{\cap^{\mathrm{op}}} \mathcal{P}(X)^{\mathrm{op}}$$

$$\mathrm{id}_{\mathcal{P}(X)^{\mathrm{op}} \times D_X} \xrightarrow{D_X} \mathcal{P}(X)$$

$$\mathcal{P}(X)^{\mathrm{op}} \times \mathcal{P}(X) \xrightarrow{[-1,-2]_X} \mathcal{P}(X)$$

commutes, i.e. we have

$$\underbrace{D_X(U\cap D_X(V))}_{\stackrel{\mathrm{def}}{=}[U\cap [V,\emptyset]_X,\emptyset]_X}=[U,V]_X$$

for each $U, V \in \mathcal{P}(X)$.

01NG

(c) Interaction With Direct Images. The diagram

$$\begin{array}{ccc}
\mathcal{P}(X)^{\mathsf{op}} & \xrightarrow{f_*^{\mathsf{op}}} \mathcal{P}(Y)^{\mathsf{op}} \\
\downarrow^{D_X} & & \downarrow^{D_Y} \\
\mathcal{P}(X) & \xrightarrow{f_!} \mathcal{P}(Y)
\end{array}$$

commutes, i.e. we have

$$f_!(D_X(U)) = D_Y(f_*(U))$$

for each $U \in \mathcal{P}(X)$.

01NH

(d) Interaction With Inverse Images. The diagram

$$\begin{array}{ccc}
\mathcal{P}(Y)^{\text{op}} & \xrightarrow{f^{-1,\text{op}}} \mathcal{P}(X)^{\text{op}} \\
\downarrow^{D_{Y}} & & \downarrow^{D_{X}} \\
\mathcal{P}(Y) & \xrightarrow{f^{-1}} & \mathcal{P}(X)
\end{array}$$

commutes, i.e. we have

$$f^{-1}(D_Y(U)) = D_X(f^{-1}(U))$$

for each $U \in \mathcal{P}(X)$.

01NJ

(e) Interaction With Codirect Images. The diagram

$$\begin{array}{ccc}
\mathcal{P}(X)^{\text{op}} & \xrightarrow{f_!^{\text{op}}} \mathcal{P}(Y)^{\text{op}} \\
\downarrow^{D_X} & & \downarrow^{D_Y} \\
\mathcal{P}(X) & \xrightarrow{f_*} \mathcal{P}(Y)
\end{array}$$

commutes, i.e. we have

$$f_*(D_X(U)) = D_Y(f_!(U))$$

for each $U \in \mathcal{P}(X)$.

PROOF 4.6.4.1.3 ► PROOF OF PROPOSITION 4.6.4.1.2

Item 1: The Beck–Chevalley Condition

We have

$$[g^{-1} \circ f_!](U) \stackrel{\text{def}}{=} g^{-1}(f_!(U))$$

$$\stackrel{\text{def}}{=} \{y \in Y \mid g(y) \in f_!(U)\}$$

$$= \left\{ y \in Y \mid \text{there exists some } x \in U \right\}$$

$$= \left\{ y \in Y \mid \text{there exists some} \right\}$$

$$= \left\{ y \in Y \mid \text{there exists some} \right\}$$

$$= \left\{ y \in Y \mid (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ y \in Y \mid (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ y \in Y \mid (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ y \in Y \mid (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in \{(x, y) \in X \times_Z Y \mid x \in U\} \right\}$$

$$= \left\{ (x, y) \in$$

for each $U \in \mathcal{P}(X)$. Therefore, we have

$$g^{-1} \circ f_! = (pr_2)_! \circ pr_1^{-1}$$
.

For the second equality, we have

$$[f^{-1} \circ g_!](U) \stackrel{\text{def}}{=} f^{-1}(g_!(U))$$

$$\stackrel{\text{def}}{=} \{x \in X \mid f(x) \in g_!(V)\}$$

$$= \left\{x \in X \middle| \text{ there exists some } y \in V \right\}$$
such that $f(x) = g(y)$

$$= \left\{x \in X \middle| \text{ there exists some} \right.$$

$$(x, y) \in \{(x, y) \in X \times_Z Y \mid y \in V\}$$

$$= \begin{cases} x \in X & \text{there exists some} \\ (x,y) \in \{(x,y) \in X \times_Z Y \mid y \in V\} \\ \text{such that } x = x \end{cases}$$

$$= \begin{cases} x \in X & \text{there exists some} \\ (x,y) \in \{(x,y) \in X \times_Z Y \mid y \in V\} \\ \text{such that } \text{pr}_1(x,y) = x \end{cases}$$

$$\stackrel{\text{def}}{=} (\text{pr}_1)_!(\{(x,y) \in X \times_Z Y \mid y \in V\})$$

$$= (\text{pr}_1)_!(\{(x,y) \in X \times_Z Y \mid \text{pr}_2(x,y) \in V\})$$

$$\stackrel{\text{def}}{=} (\text{pr}_1)_!(\text{pr}_2^{-1}(V))$$

$$\stackrel{\text{def}}{=} [(\text{pr}_1)_! \circ \text{pr}_2^{-1}](V)$$

for each $V \in \mathcal{P}(Y)$. Therefore, we have

$$f^{-1} \circ g_! = (\operatorname{pr}_1)_! \circ \operatorname{pr}_2^{-1}$$
.

This finishes the proof.

Item 2: The Projection Formula I

We claim that

$$f_!(U) \cap V \subset f_!(U \cap f^{-1}(V)).$$

Indeed, we have

$$f_!(U) \cap V \subset f_!(U) \cap f_!(f^{-1}(V))$$
$$= f_!(U \cap f^{-1}(V)),$$

where we have used:

- 1. Item 2 of Proposition 4.6.1.1.5 for the inclusion.
- 2. Item 6 of Proposition 4.6.1.1.5 for the equality.

Conversely, we claim that

$$f_!(U\cap f^{-1}(V))\subset f_!(U)\cap V.$$

Indeed:

024C

024B

024D

1. Let $y \in f(U \cap f^{-1}(V))$.

024E

2. Since $y \in f_!(U \cap f^{-1}(V))$, there exists some $x \in U \cap f^{-1}(V)$ such that f(x) = y.

024F

3. Since $x \in U \cap f^{-1}(V)$, we have $x \in U$, and thus $f(x) \in f_!(U)$.

024G

4. Since $x \in U \cap f^{-1}(V)$, we have $x \in f^{-1}(V)$, and thus $f(x) \in V$.

024H

5. Since $f(x) \in f_!(U)$ and $f(x) \in V$, we have $f(x) \in f_!(U) \cap V$.

024J

6. But y = f(x), so $y \in f_{!}(U) \cap V$.

024K

7. Thus $f_!(U \cap f^{-1}(V)) \subset f_!(U) \cap V$.

This finishes the proof.

Item 3: The Projection Formula II

We have

$$f_*(U) \cap V \subset f_*(U) \cap f_*(f^{-1}(V))$$

= $f_*(U \cap f^{-1}(V))$,

where we have used:

024L

1. Item 2 of Proposition 4.6.3.1.7 for the inclusion.

024M

2. Item 6 of Proposition 4.6.3.1.7 for the equality.

Since $\mathcal{P}(Y)$ is posetal, naturality is automatic (Categories, Item 4 of Proposition 11.2.7.1.2).

Item 4: Strong Closed Monoidality

This is a repetition of Item 19 of Proposition 4.4.7.1.4 and is proved there.

Item 5: The External Tensor Product

We have

$$U \boxtimes_{X \times Y} V \stackrel{\text{def}}{=} \operatorname{pr}_1^{-1}(U) \cap \operatorname{pr}_2^{-1}(V)$$

$$\begin{split} &\overset{\text{def}}{=} \left\{ (x,y) \in X \times Y \, \middle| \, \operatorname{pr}_1(x,y) \in U \right\} \\ & \quad \cup \left\{ (x,y) \in X \times Y \, \middle| \, \operatorname{pr}_2(x,y) \in V \right\} \\ & \quad = \left\{ (x,y) \in X \times Y \, \middle| \, x \in U \right\} \\ & \quad \cup \left\{ (x,y) \in X \times Y \, \middle| \, y \in V \right\} \\ & \quad = \left\{ (x,y) \in X \times Y \, \middle| \, x \in U \text{ and } y \in V \right\} \\ & \stackrel{\text{def}}{=} U \times V. \end{aligned}$$

Next, we claim that Items 5a to 5d are indeed true:

- 1. *Proof of Item 5a*: This is a repetition of Item 16 of Proposition 4.6.1.1.5 and is proved there.
- 2. *Proof of Item 5b*: This is a repetition of Item 16 of Proposition 4.6.2.1.3 and is proved there.
 - 3. *Proof of Item 5c*: This is a repetition of Item 15 of Proposition 4.6.3.1.7 and is proved there.
 - 4. Proof of Item 5d: We have

$$\begin{split} \Delta_X^{-1}(U\boxtimes_{X\times X}V) &\stackrel{\text{def}}{=} \{x\in X \mid (x,x)\in U\boxtimes_{X\times X}V\}\\ &= \{x\in X \mid (x,x)\in \{(u,v)\in X\times X \mid u\in U \text{ and } v\in V\}\}\\ &= U\cap V. \end{split}$$

This finishes the proof.

Item 6: The Dualisation Functor

This is a repetition of Items 5 and 6 of Proposition 4.4.7.1.4 and is proved there.

$$\mathcal{P}(A) \xrightarrow{f_*} \mathcal{P}(A)$$

In other words, we have

$$\left\{a \in A \,\middle|\, f^{-1}(f(a)) \subset U\right\} = U$$

for each $U \in \mathcal{P}(A)$.

¹Items 1c to 1f unwind respectively to the following statements:

- For each $U, V \in \mathcal{P}(A)$, if $f_!(U) = f_!(V)$, then U = V.
- For each $U, V \in \mathcal{P}(A)$, if $f_*(U) = f_*(V)$, then U = V.
- For each $U, V \in \mathcal{P}(A)$, if $f_!(U) \subset f_!(V)$, then $U \subset V$.
- For each $U, V \in \mathcal{P}(A)$, if $f_*(U) \subset f_*(V)$, then $U \subset V$.

02RU

02RV

PROOF 4.7.1.1.3 ► PROOF OF PROPOSITION 4.7.1.1.2

Item 1: Characterisations

We will proceed by showing:

- Step 1: Item 1a ← Item 1b.
- Step 2: Item 1a ← Item 1c.
- Step 3: Item 1a ← Item 1d.
- Step 4: Item 1c ← Item 1e.
- Step 5: Item 1e \iff Item 1f.
- Step 6: Item 12 ← Item 1g.
- Step 7: Item 1g ← Item 1h.
- Step 8: Item 1a ← Item 1i.

Step 1: Item 1a ⇐⇒ Item 1b

We claim that Items 1a and 1b are equivalent:

- *Item 1a* \Longrightarrow *Item 1b*: We proceed in a few steps:
 - Proceeding by contrapositive, we claim that given a pair of maps $g, h: C \rightrightarrows A$ such that $g \neq h$, we have $f \circ g \neq f \circ h$.
 - Indeed, as g and h are different maps, there must exist at least one element $x \in C$ such that $g(x) \neq h(x)$.
 - But then we have $f(g(x)) \neq f(h(x))$, as f is injective.
 - Thus $f \circ g \neq f \circ h$, and we are done.
- *Item 1b* \Longrightarrow *Item 1a*: We proceed in a few steps:

- Consider the diagram

$$\operatorname{pt} \xrightarrow{[y]} A \xrightarrow{f} B,$$

where [x] and [y] are the morphisms picking the elements x and y of A.

- Note that we have f(x) = f(y) iff $f \circ [x] = f \circ [y]$.
- Since f is assumed to be a monomorphism, if f(x) = f(y), then $f \circ [x] = f \circ [y]$ and therefore [x] = [y].
- This shows that if f(x) = f(y), then x = y, so f is injective.

Step 2: Item 1a ← Item 1c

We claim that Items 1a and 1c are indeed equivalent:

- *Item 1a* \Longrightarrow *Item 1c*: We proceed in a few steps:
 - Assume that f is injective and let $U, V \in \mathcal{P}(A)$ such that $f_!(U) = f_!(V)$. We wish to show that U = V.
 - To show that $U \subset V$, let $u \in U$.
 - − By the definition of the direct image, we have $f(u) \in f_!(U)$.
 - Since $f_!(U) = f_!(V)$, it follows that $f(u) ∈ f_!(V)$.
 - Thus, there exists some $v \in V$ such that f(v) = f(u).
 - Since f is injective, the equality f(v) = f(u) implies that v = u.
 - Thus $u \in V$ and $U \subset V$.
 - A symmetric argument shows that $V \subset U$.
 - Therefore U = V, showing $f_!$ to be injective.
- Item 1c \Longrightarrow Item 1a: We proceed in a few steps:

- Assume that the direct image function $f_!$ is injective and let $a, a' \in A$ such that f(a) = f(a'). We wish to show that a = a'.
- Since

$$f_!(\{a\}) = \{f(a)\}\$$

$$= \{f(a')\}\$$

$$= f_!(\{a'\}),\$$

we must have $\{a\} = \{a'\}$, as $f_!$ is injective, so a = a', showing f to be injective.

Step 3: Item 1c ← Item 1d

This follows from Item 17 of Proposition 4.6.1.1.5.

Step 4: Item 1c ← Item 1e

We claim that Items 1c and 1e are equivalent:

- Item $1c \implies Item 1e$: We proceed in a few steps:
 - Let $U, V \in \mathcal{P}(A)$ such that $f_!(U) \subset f_!(V)$, assume $f_!$ to be injective, and consider the set $U \cup V$.
 - Since $f_!(U)$ ⊂ $f_!(V)$, we have

$$f_!(U \cup V) = f_!(U) \cup f_!(V)$$
$$= f_!(V),$$

where we have used Item 5 of Proposition 4.6.1.1.5 for the first equality.

- Since $f_!$ is injective, this implies $U \cup V = V$.
- Thus $U \subset V$, as we wished to show.

- *Item 1c* \Longrightarrow *Item 1e*: We proceed in a few steps:
 - Suppose Item 1e holds, and let $U, V \in \mathcal{P}(A)$ such that $f_!(U) = f_!(V)$.
 - Since $f_!(U) = f_!(V)$, we have $f_!(U) \subset f_!(V)$ and $f_!(V) \subset f_!(U)$.
 - By assumption, this implies $U \subset V$ and $V \subset U$.
 - Thus U = V, showing f_1 to be injective.

Step 5: Item 1e ← Item 1f

This follows from Item 17 of Proposition 4.6.1.1.5.

Step 6: Item 1a ← Item 1g

We have

$$f^{-1}(f(a)) = \{a' \in A \mid f(a') = f(a)\}\$$

so the condition $f^{-1}(f(a)) = \{a\}$ states precisely that if f(a') = f(a), then a' = a.

Step 7: Item 1g ⇐⇒ Item 1h

We claim that Items 1g and 1h are indeed equivalent:

• *Item 1g* \Longrightarrow *Item 1h*: We have

$$[f^{-1} \circ f_!](U) \stackrel{\text{def}}{=} f^{-1}(f_!(U))$$

$$= f^{-1} \left(f_! \left(\bigcup_{u \in U} \{u\} \right) \right)$$

$$= f^{-1} \left(\bigcup_{u \in U} f_!(\{u\}) \right)$$

$$= \bigcup_{u \in U} f^{-1}(f_!(\{u\}))$$

$$= \bigcup_{u \in U} f^{-1}(f_!(u))$$

$$= \bigcup_{u \in U} \{u\}$$

$$= U$$

for each $U \in \mathcal{P}(A)$, where we have used Item 5 of Proposition 4.6.1.1.5 for the third equality and Item 5 of Proposition 4.6.2.1.3 for the fourth equality.

• *Item 1h* \Longrightarrow *Item 1g*: Applying the condition $f^{-1} \circ f_! = \mathrm{id}_{\mathcal{P}(A)}$ to $U = \{a\}$ gives

$$f^{-1}(f_!(\{a\})) = \{a\}.$$

Step 8: Item 1a ← Item 1i

We claim that Items 1a and 1i are equivalent:

• *Item 1a* \Longrightarrow *Item 1i*: If f is injective, then $f^{-1}(f(a)) = \{a\}$, so we have

$$f^{-1}(f_*(a)) = \{ a \in A \mid \{a\} \subset U \}$$

= U.

• Item 1i \Longrightarrow Item 1a: For $U=\{a\}$, the condition $f^{-1}(f_*(U))=U$ becomes

$$\left\{ a' \in A \, \middle| \, f^{-1}(f(a')) \subset \{a\} \right\} = \{a\}.$$

Since the set $f^{-1}(f(a'))$ is given by

$$\{a\in A\,|\,f(a)=f(a')\},$$

it follows that f is injective.

This finishes the proof.

02RW 4.7.2 Surjective Functions

Let A and B be sets.

02RZ

02RX DEFINITION 4.7.2.1.1 ► Surjective Functions

A function $f: A \to B$ is **surjective** if it satisfies the following condition:

 (\star) For each $b \in B$, there exists some $a \in A$ such that f(a) = b.

O2RY PROPOSITION 4.7.2.1.2 ▶ PROPERTIES OF SURJECTIVE FUNCTIONS

Let $f: A \to B$ be a function.

- 1. Characterisations. The following conditions are equivalent:
 - (a) The function f is surjective.
 - (b) The function f is an epimorphism in Sets.
 - (c) The inverse image function

$$f^{-1} \colon \mathcal{P}(B) \to \mathcal{P}(A)$$

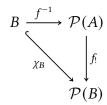

associated to f is injective.

(d) The inverse image functor

$$f^{-1} \colon (\mathcal{P}(B), \subset) \to (\mathcal{P}(A), \subset)$$

associated to f is full.

(e) The diagram

commutes. That is, we have

$$f_!(f^{-1}(b)) = \{b\}$$

for each $b \in B$.

02S5

(f) We have

$$f_! \circ f^{-1} = \mathrm{id}_{\mathcal{P}(B)}$$

$$\mathcal{P}(B) \xrightarrow{f^{-1}} \mathcal{P}(A)$$

$$\downarrow_{f_!}$$

$$\mathcal{P}(B)$$

In other words, we have

$$\left\{b \in B \middle| \begin{array}{l} \text{there exists some } a \in f^{-1}(U) \\ \text{such that } f(a) = b \end{array} \right\} = U$$

for each $U \in \mathcal{P}(A)$.

(g) We have

$$f_* \circ f^{-1} = \mathrm{id}_{\mathcal{P}(B)} \qquad \qquad \downarrow^{f^{-1}} \mathcal{P}(A)$$

$$\mathcal{P}(B) \xrightarrow{f^{-1}} \mathcal{P}(A)$$

$$\mathcal{P}(B).$$

In other words, we have

$$\left\{b\in B\,\middle|\, f^{-1}(b)\subset f^{-1}(U)\right\}=U$$

for each $U \in \mathcal{P}(B)$.

PROOF 4.7.2.1.3 ► PROOF OF PROPOSITION 4.7.2.1.2

Item 1: Characterisations

We will proceed by showing:

• Step 1: Item 1a ← Item 1b.

02S6

- Step 2: Item 1a ← Item 1c.
- Step 3: Item 1c ← Item 1d.
- Step 4: Item 12 ← Item 1e.
- Step 5: Item 1e ← Item 1f.
- Step 6: Item 12 ← Item 1g.

Step 1: Item 1a ⇐⇒ Item 1b

We claim Items 1a and 1b are indeed equivalent:

- *Item 1a* \Longrightarrow *Item 1b*: We proceed in a few steps:
 - Let $g, h \colon B \rightrightarrows C$ be morphisms such that $g \circ f = h \circ f$.
 - For each $a \in A$, we have

$$q(f(a)) = h(f(a)).$$

- However, this implies that

$$q(b) = h(b)$$

for each $b \in B$, as f is surjective.

- Thus g = h and f is an epimorphism.
- *Item 1b* ⇒ *Item 1a*: We proceed by contrapositive. Consider the diagram

$$A \xrightarrow{f} B \xrightarrow{g} C$$
,

where h is the map defined by h(b) = 0 for each $b \in B$ and g is the map defined by

$$g(b) = \begin{cases} 1 & \text{if } b \in \text{Im}(f), \\ 0 & \text{otherwise.} \end{cases}$$

Then $h \circ f = g \circ f$, as h(f(a)) = 1 = g(f(a)) for each $a \in A$. However, for any $b \in B \setminus \text{Im}(f)$, we have

$$q(b) = 0 \neq 1 = h(b)$$
.

Therefore $q \neq h$ and f is not an epimorphism.

Step 2: Item 1a ← Item 1c

We claim Items 1a and 1c are indeed equivalent:

- *Item 1a* \Longrightarrow *Item 1c*: We proceed in a few steps:
 - Assume that f is surjective. Let $U, V \in \mathcal{P}(B)$ such that $f^{-1}(U) = f^{-1}(V)$. We wish to show that U = V.
 - To show that $U \subset V$, let $b \in U$.
 - Since f is surjective, there must exist some $a \in A$ such that f(a) = b.
 - By the definition of the inverse image, since f(a) = b and $b \in U$, we have $a \in f^{-1}(U)$.
 - By our initial assumption, $f^{-1}(U) = f^{-1}(V)$, so it follows that $a \in f^{-1}(V)$.
 - Again, by the definition of the inverse image, $a \in f^{-1}(V)$ means that $f(a) \in V$.
 - Since f(a) = b, we have shown that $b \in V$.
 - This establishes that $U \subset V$. A symmetric argument shows that $V \subset U$.
 - Thus U = V, proving that f^{-1} is injective.
- *Item 1c* \Longrightarrow *Item 1a*: We proceed in a few steps:
 - Assume that the inverse image function f^{-1} is injective. Suppose, for the sake of contradiction, that f is not surjective.

- The assumption that f is not surjective means there exists some $b_0 \in B$ such that for all $a \in A$, we have $f(a) \neq b_0$.
- By the definition of the inverse image, this is equivalent to stating that $f^{-1}(\{b_0\}) = \emptyset$.
- Since $f^{-1}(\emptyset) = \emptyset$, we have $f^{-1}(\{b_0\}) = f^{-1}(\emptyset)$.
- Since f^{-1} is injective, this implies that $\{b_0\} = \emptyset$.
- This is a contradiction, as the singleton set $\{b_0\}$ is non-empty.
- Therefore, *f* is surjective.

Step 3: Item 1c ← Item 1d

We claim that Items 1c and 1d are equivalent:

- Item $1c \Longrightarrow Item 1d$: We proceed in a few steps:
 - Let $U, V \in \mathcal{P}(B)$ such that $f^{-1}(U) \subset f^{-1}(V)$, assume f^{-1} to be injective, and consider the set $U \cup V$.
 - Since $f^{-1}(U) \subset f^{-1}(V)$, we have

$$f^{-1}(U \cup V) = f^{-1}(U) \cup f^{-1}(V)$$
$$= f^{-1}(V),$$

where we have used Item 5 of Proposition 4.6.2.1.3 for the first equality.

- Since f^{-1} is injective, this implies $U \cup V = V$.
- Thus $U \subset V$, as we wished to show.
- *Item 1d* \Longrightarrow *Item 1c*: We proceed in a few steps:
 - Suppose Item 1d holds, and let $U, V \in \mathcal{P}(B)$ such that $f^{-1}(U) = f^{-1}(V)$.

- Since $f^{-1}(U)=f^{-1}(V)$, we have $f^{-1}(U)\subset f^{-1}(V)$ and $f^{-1}(V)\subset f^{-1}(U)$.
- By assumption, this implies $U \subset V$ and $V \subset U$.
- Thus U = V, showing f^{-1} to be injective.

Step 4: Item 1a ← Item 1e

We have

$$f_!(f^{-1}(b)) = \left\{ b \in B \middle| \begin{array}{l} \text{there exists some } a \in f^{-1}(b) \\ \text{such that } f(a) = b \end{array} \right\},$$

so the condition $f_!(f^{-1}(b)) = \{b\}$ holds iff f is surjective.

Step 5: Item 1e \iff Item 1f

We claim that Items 1e and 1f are indeed equivalent:

• Item 1e \Longrightarrow Item 1f: We have

$$[f! \circ f^{-1}](U) \stackrel{\text{def}}{=} f!(f^{-1}(U))$$

$$= f! \left(\bigcup_{u \in U} \{u\} \right) \right)$$

$$= f! \left(\bigcup_{u \in U} f^{-1}(\{u\}) \right)$$

$$= \bigcup_{u \in U} f!(f^{-1}(\{u\}))$$

$$= \bigcup_{u \in U} \{u\}$$

$$= U$$

for each $U \in \mathcal{P}(B)$, where we have used Item 5 of Proposition 4.6.1.1.5 for the third equality and Item 5 of Proposition 4.6.2.1.3 for the fourth equality.

• Item if \Longrightarrow Item ie: Applying the condition $f_! \circ f^{-1} = \mathrm{id}_{\mathcal{P}(B)}$ to $U = \{b\}$ gives

$$f_!(f^{-1}(\{b\})) = \{b\}.$$

Step 6: Item 1a ← Item 1g

First, note that for the condition $f^{-1}(b)\subset f^{-1}(U)$ to hold, we must have $b\in U$ or $f^{-1}(b)=\emptyset$. Thus

$$f_*(f^{-1}(U)) = (U \cap \operatorname{Im}(f)) \cup (B \setminus \operatorname{Im}(f)).$$

We now claim that Items 1a and 1g are indeed equivalent:

• Item 1a \Longrightarrow Item 1g: If f is surjective, we have

$$(U \cap \operatorname{Im}(f)) \cup (B \setminus \operatorname{Im}(f)) = U \cup \emptyset$$

= U .

so
$$f_* \circ f^{-1} = \mathrm{id}_{\mathcal{P}(B)}$$
.

• Item $1g \Longrightarrow Item 1a$: Taking $U = \emptyset$ gives

$$f_*(f^{-1}(\emptyset)) = (\emptyset \cap \operatorname{Im}(f)) \cup (B \setminus \operatorname{Im}(f))$$

= $B \setminus \operatorname{Im}(f)$,

so the condition $f_*(f^{-1}(\emptyset)) = \emptyset$ implies $B \setminus \text{Im}(f) = \emptyset$. Thus Im(f) = B and f is surjective.

This finishes the proof.
